Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

3RD YEAR / VI Semester

ARCH 601: Architectural Design - V

Course Educational Objectives (CEOs):

To develop abilities in design in the context of user requirements.

Course outcomes (COs):

At the end of the course, students will be able to

Students will learn to develop the design proposal, which could reach the execution

stage.

The student will achieve the capacity to Production of detailed drawings necessary for

the execution of the building

The student will develop an understanding and importance of detail, integration of

Building systems, clarity and effective communication of production drawings

Expected Skills
Knowledge Transferred:

To enhance the understanding of the complexities of architectural design for residential needs and develop creative design solutions for good living environments. Use of standards, handling of space, and application of knowledge gained from other subjects

in design.

Focus: Design Development

To enhance the understanding of the complexities of architectural design for residential needs and develop creative design solutions for good living environments.

Course Overview:

• This course is intended to provide skills for designing single-use, small-span and single-storey buildings.

Course Contents:

Sr. No. Syllabus: Topic Subtopic Teaching Hours:

DESIGN

III.

IV.

Part-Whole relationship – Back and forth design processes

Exposure to materials, products, and assembly constructional principles.

Methods of specification writing information systems used in working drawings.

Structural and Services Resolution of Part (Short Project) including calculations and specifications/approximate costing

I. Theme & focus of design:

Study, analysis & utilization of Contemporary Structural Systems in Hi-tech Architecture; Understanding, exploration & development of design programme, concepts & detailed design with a focus on Steel. Behavioral Science; Functionality; Building Materials; Theory of

II. Basic Design; Form Development; Tectonic decisions: Structures, Building Materials, Services; Site Planning; Building Control Regulations;

Inclusive Design; Design Communication.

Importance Exploring & Understanding the essence: detailing n

Importance, Exploring & Understanding the essence; detailing process; User analysis; Elements; functionality, aesthetics; Materials. This

Temporal Minor Exercise will be represented through conceptual development (sketches, physical & digital models).

Exploration & analysis of works of iconic Hi-tech Architecture; Understanding design philosophy & process; Learning from design

Design Analysis: quality, Literature/book reviews; Architectural critiques.

Building Design. The complexity of design: Multi-storied building/s or large-span structures. Focus on building services as an integral part of

large-span structures. Focus on building services as an integral part of the design & construction process. Typology: Transport Hubs, Shopping Malls, Hotels, Hospitals, Media Houses, Broadcasting

Stations, Sports Facilities, Apartments, etc. Site extent: Up to 8000 m2. 46 hrs

Sessional work:

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; S - Studio; C - Credit;

Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Guidelines

Necessary theoretical inputs are to be given highlighting the norms and design issues. The topics not covered as design problems will have to be covered by the Studio faculty members through lecture/slideshow sessions and site visits.

Assignments /Tasks are to be set from the entire syllabus; The topic of the project is to be displayed on the Institute Notice Board fifteen days - a week time in advance OF the commencement of the classes

Continuous Evaluation shall be made of students' work based on various models, sketch assignments, and market surveys.

One Major And the rest minor tasks are to be set from the entire syllabus

Assignments:

The final submission shall necessarily include a model for at least one of the two main

problems.

In the end, in an exam which is a viva-voce, the students have to present the entire semester's

work for assessment.

Note:

Evaluation is to be done through viva voce by an external examiner appointed by the university at the Institute. Portfolios, after the university exam, shall be retained

at the Institute level for the viva-voice

ARCH 602: Human Settlement Planning

Course Educational Objectives (CEOs)::

To make the student understand various planning-related issues.

Course outcomes (COs):

At the end of the course, students will be able to

Compare different types of settlements based on their characteristics and attributes.

Explain the evolution of a place with time and mass.

Identify the stakeholders, indicators, etc. associated with the Land Economies. Apply the tools required to assess the present statistics of a Place/ Area. Analyze different approaches associated with the Implementation Strategies. Should be in a position to make a neighbourhood plan for 5000 people.

Expected Skills Knowledge Transferred:

Focus: Town planning skills

Compare different types of settlements based on their characteristics and attributes.

Course Overview:

This course focuses on the review of the origin of Human Settlements to the level of understanding of the various Town Planning problems.

- Understand the concept of urban planning.
- Gain knowledge of the evolution of Human Settlements in history
- Apply the principles of physical planning in preparing a settlement plan and Pattern of Urbanization

Course Contents:

| Unit | Syllabus: Topic | Subtopic | Teaching Hours: |
|------|--------------------------------|---|-----------------|
| | | n of town forms in urban planning and development processes. National, asizing the difference and relationships among them. | |
| I. | Introduction to Urbanisation | Urbanization: Facts, Theories. Socio-spatial problems of migrants, slums, high and low-density housing; high rise living such as isolation, alienation, accessibility, conflicts etc as related to the planning and design of buildings in different areas of the city. Social Survey and social research. Transportation and communication: | 10hrs |
| II. | Introduction to Urban planning | Basic concepts of land use planning – purpose, need and requirement; goals, objectives and principles Determinants of land use and planning process. Population studies and forecasting. Benefits of planning; Arguments for and against planning | 5 hrs |
| III. | Theories of Urban planning | Different theories and debates of land-use planning – Concentric Zone Theory, Isolate Estate Model, Sector Theory, Multiple Nuclei Theory etc.; Landuse allocation models – William Alonso: Bid Rent Theory, etc. Debates on land-use planning: transit-oriented development, land-use intensity and the size of the city, sprawl and compact urban form etc. Contemporary Concepts In Town Planning: Role and contribution of the following towards contemporary town planning thought - Patrick Geddes, Patric Abercrombie, Daniel Burnham, Soria Y Mata, Frederick Olmstead, Henry Wright, Ebenezer Howard, Clarence Perry, Clearance Stein, CA Doxiadis, Le Corbusier, Frank Lloyd Wright. Principles of Ekistics: Introduction to the concepts of green belts, satellite towns, neighbourhoods, and roads in solving some of the | 8 hrs |

Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

problems in urban development. Indian context: Growth pattern of urban and rural settlements; problems and potentials.

IV. Contemporary issues of Urban Planning

Sustainability and rationality in planning

Components of sustainable urban and regional development Landuse planning practices – Indian and global perspective.

New Horizons: Rebuilding our cities – penalty for neglect, Urban renewal, Necessity and Advantages of urban renewal- various steps in urban renewal programme New utopians – the search for space – the form search – density equation, A brief introduction to redevelopment schemes and urban renewal, the problem of slum and shanty areas and a review of the concepts regarding solutions: clearance, rehabilitation and improvement.

V. Legislations Regulations Land as a resource: Its character, potential Land value; drivers of 5 hrs

demand for land on the land market

Statues and laws governing land administration and management.

Urban landuse classifications

Different policies related to land use and zoning, land suitability

analysis etc.

Principles And Process Of Planning:

Development plans-

A general and introductory study of inputs, objectives, preparation and outputs of a Master plan for a city; land-use classification, features and relationships with transportation. Meaning and use or implication of OD surveys, desire line diagrams trip generation, attraction, distribution and modal split.

Introduction to housing and community facilities; the role of F.S.I, densities in housing. The basic methodology for the planning of industrial areas and recreation areas.

Governance Planning of • Local government in India

• District Planning Committees and Metropolitan Planning

Committees;

• ULC, Area/Urban Development Authorities

Sessional work:

Guidelines Assignments / Tasks are to be set from the entire syllabus; The topic of the project is to

be displayed on the Institute Notice Board fifteen days - a week time in advance OF

the commencement of the classes

Continuous Evaluation shall be made of students' work based on various models,

sketch assignments, and market surveys.

One Major And the rest minor tasks are to be set from the entire syllabus

Assignments: At least one exercise related to the preparation of a layout for a residential neighbourhood

of about 5000 populations. This is a studio subject and students should be made to prepare layout drawings as studio exercises along with the theoretical inputs. The studio work should

be supplemented with appropriate site visits.

Evaluation is to be done through viva voce by an external examiner appointed by the university at the Institute. Portfolios, after the university exam, shall be retained

at the Institute level for the viva-voice

ARCH 604: Digital Techniques of Representation

Course Educational Objectives (CEOs)::

overall nurt uring of the student with issues in practice and field outside

The course shares an In-depth understanding of 3D modelling through digital software to enable the student to make effective audiovisual presentations, create three-dimensional models and visualization of interiors. The intent is to possess intermediate to advanced skills with improvement in the speed and quality of modelling.

Course outcomes (COs):

Focus: Computer based Skills

At the end of the course, students will be able to

The program equips you with both academic and practical knowledge to help navigate the fast-evolving world of the

Visual Design and User Experience industry.

Expected Skills / Knowledge Transferred:

The program equips the world of the Visual Design and User

Experience industry

3D modelling through digital software to enable the student to make effective audiovisual presentations, create three-

dimensional models and visualization

Course Overview:

Design as an expertise appeals to and applies to a wide range of professionals across roles and sectors. This program is ideal for Aspiring and practising designers, researchers, and Startup entrepreneurs: Select fresh graduates with exceptional potential aspiring to start their career in design

Course Contents:

| Unit | Syllabus: Topic | Subtopic | Teaching Hours: |
|------------|---------------------------------------|---|-----------------|
| Developing | Interior Views and simple | ng 3d modelling software such as 3dsmax, Revit, Rhino etc. designs, applying materials and creating rendered images through Ray etc. Introduction to Animation. Design Building Blocks; Perceivable and Non-Perceivable Elements of Design; Overview of principles of design basics Form and functionality correlation; Overview of Design Process | 8hrs |
| II. | Visual Thinking | with Basics of Design Methods. Basic colour theories; Gestalt Principles; Types and techniques of drawing methods and visualization; Understanding various art materials, usage and visualization techniques; Design drawing Design Thinking and its correlation with visual and optical perspectives; Dimensions of visual thinking: Drawings, Diagrams, Maps, Visual Composition, Narratives, History and Visuality, | 8hrs |
| III. | UX-UI Foundations | Researching the Visual Overview of UX-UI Design; User profiling and its importance in designing delightful products and experiences | 5hrs |
| IV. | Digital Storytelling | Deeper aspects of UX-UI; Introduction, User Experience Design Research, Designing and Ideating, Foundations of UI, Prototyping, Final output Mediums of photography, animation, film-making; Composition and various storytelling techniques; Creating a script, Storyboarding, Art Direction, Cinematography, Lighting, Sound, | 5hrs |
| V. | Graphic Design and Visual Branding | Editing; Understanding cinematic language and practising it through making a film. Typography; Publication Design; Branding and Identity; Information and Data Visualization | 4 hrs |

Course Educational Objectives (CEOs)::

Students will und erstand the fundamental concepts and theories of urban design and apply them in their design projects.

Course outcomes (COs):

At the end of the course, students will be able to

To develop a conceptual understanding of Urban Design and contextual planning principles in the built environments

Expected Skills / Knowledge

To develop a conceptual understanding of the Urban contextual w.r.t human

Transferred: Focus: understanding of urban

The overall goal of the course is to help students formulate an understanding of urban forms and spaces. The city's HISTORY OF ARCHITECTURE will be examined. The contemporary needs of society and the role of spaces will be dealt with along with the need for design control.

forms and spaces

Course Overview:

The overall goal of the course is to help students formulate an understanding of urban forms and spaces. The city's HISTORY OF ARCHITECTURE will be examined. The contemporary needs of society and the role of spaces will be dealt with along with the need for design control.

Course Contents:

Unit

| it | Syllabus: Topic | Subtopic | Teaching Hours: |
|------|---|---|-----------------|
| I. | Introduction: | Introduction: Introduction to Urban Design; Terminologies; Stakeholders & their role in the process of Urban Design; Urban Design as a Multidisciplinary field; Necessity & benefits of quality urban design; Scope, strategies, levels, legislation & scale of Urban Design. The emergence of urban design as a discipline – Concepts of urban design – Urban design theories of Gordon Cullen and Kevin Lynch People's Perception: | 4hrs |
| II. | Anatomy of an Urban Area | Anatomy of an Urban Area: Urban morphology & urban character; Elements & aspects of Urban Design; Built & Unbuilt spaces; Buildings, public spaces, streets & transport; pedestrianisation & streetscape; movement pattern; services; safety & sensitive urban development – defensible spaces. Nature and urban design - open spaces; Environment & urban design. Urban scale, Mass and Space; Understanding components of urban fabric; Making a Visual survey; Understanding the various urban spaces in the city and their hierarchy- Spaces for residential, commercial, recreational and industrial use: Special focus on streets; Expressive quality of built forms, spaces in the public domain | 5hrs |
| III. | Urban Design Process: | Urban Design Process: Survey techniques; Evolution analysis; Townscape analysis; Perceptual structure; Permeability study (privacy & accessibility) & visual analysis. Constraints & possibilities; Designing in a context and site planning; Articulation of spaces; Multi-functionality, flexibility, adaptability; Generating alternatives; Formulation of issues for intervention. | 8hrs |
| IV. | Study Of Urban Spaces Through History | A brief analysis of urban spaces in history – in the West (Greek, Roman, Medieval and Renaissance towns) and the East (Vedic, temple towns, medieval and Islamic towns); Relevance of the historical concepts in the present context; Critical analysis of some Indian cities like New Delhi, Chandigarh | 8hrs |

ARCH 607: Structural Design -III

Course Educational Objectives (CEOs)::

To create skills among students to apply the knowledge gained regarding structural design in an applied project and to make buildings safe against natural/ manmade disasters

Course outcomes (COs):

At the end of the course, students will be able to

Explain the concept of indeterminate structure and its application in construction. Outline the types of indeterminate structures and explain various methods of

Analyze different indeterminate structures and compare their structural behavior.

Outline the basic design criteria for disaster-resistant structures

Expected Skills Prepare working drawings for a project and resolve complex aspects in the buildings

with appropriate materials and design details.

Knowledge Transferred: Focus: Structural Design

to impart skills related to the preparation of drawings meant for construction work

on the site and to improve the students' ability to detail.

Course Overview:

The focus of the course is to impart skills related to the preparation of drawings meant for construction work on the site and to improve the students' ability to detail.

To impart training in the preparation of working drawings for buildings with specific reference to the code of practice as per IS Code No. 962 of 1969 and incorporating specifications as complementary to the working drawings.

To sensitize the students in preparing finer design details required for buildings.

The student shall prepare a report consisting of the Detailed Structure Design of a building considering all safety factors including fire, earthquake, cyclone, floods, etc.

Report being prepared in bound form with drawings attached.

Course Contents:

| Unit | Syllabus: Topic | Subtopic | Teaching Hours: |
|------|--|--|-----------------|
| I. | Overview | Working Drawing, of a project the design of the structure of a project from the foundation to the final structural plans of slabs | 8 hrs |
| II. | Details | beams and columns and structural drawings Detailed Structural Design & Drawings of a Public /Residential Building, (R.C.C. frame structure) with emphasis laid on practical | 8 hrs |
| III. | disasters resistant | design considerations. • Earthquake Resistant Design. | 8 hrs |
| IV. | design safety factors from disasters | Introduction to Codal provision, IS- 4326 and IS- 1893 for Earthquake Resistant Design of Buildings. Earthquake Resistant provisions for Brick Masonry& R.C.C. Buildings. | 6 hrs |

Focus: Manual Skills

The creative electives provide an opportunity to express talents that are different from architecture but related to imagination, visualization & creation. They offer hands-on experience of unique ingenuity & workmanship. The essence of a creative domain can be achieved by exploring different materials, techniques, and processes; developing creative products; and finishing & presenting the product for the concepts that evolved. The outcome will be through portfolio & presentations.

As Per Pool Electives Choices Stage I odd semester pool

Course Overview:

The following is a representative list of Institute projects: Seminars, Tutorials/ additional classes for any course, Guest Lectures, Workshops, Providing knowledge to support students being sensitive to design;

Sessional work:

Guidelines The topic of the project is to be displayed on the Institute Notice Board fifteen days

in advance OF the commencement of the classes

Assignments / Tasks are to be set from the entire syllabus; The topic of the project is to be displayed on the Institute Notice Board fifteen days - a week time in advance OF

the commencement of the classes

One Major And the rest minor tasks are to be set from the entire syllabus **Assignments:**

> Evaluation is to be done through viva voce by an external examiner appointed by the university at the Institute. Portfolios, after the university exam, shall be retained

at the Institute level for the viva-voice Evaluation: Stages: Proposal and on final submission of the paper

Note: /DOCUMENTATION of places visited Students contribute to the topic/area is of

critical importance. Evaluation is to be done through viva voce, Portfolios after the university exam shall be retained at the Institute level for the viva-voice

Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

The students will have knowledge and significance of colour in architecture

Course outcomes (COs):

At the end of the course, students will be able to

The student will develop sensitivity towards colour

The student will develop the capacity for Critical appraisal of the colour used

in buildings

Expected Skills
Knowledge Transferred:

Define the role, importance, and impact of colour in architecture

Demonstrate colour as a medium of sensory perception and its physiological,

and psychological effect in architecture.

Analyze and explain the effect of different colours in the design to create

specific effects in spaces

to convey the importance of colour and its influence on human behaviour

Focus: Colour in architecture

Define the role, importance, and impact of colour in architecture

Course Overview:

The student will be able to understand the impact of colour in architecture;

Course Contents:

ARCH 609.2: Culture & Architecture

Course Educational Objectives (CEOs)::

Understanding of the various issues of culture involved in design solutions. Students of architecture have to be sensitized to various cultural aspects such as fine arts and the performing arts of a particular country and have to understand the symbolism, patterns and forms that manifest themselves in the architecture of that place.

Course outcomes (COs):

At the end of the course, students will be able to

sensitizing students to culture-specific architecture

and space planning

Expected Skills / Knowledge Transferred:

To understand the techniques of incorporating culture and sensitizing students to culture-specific

architecture and space planning

Focus: architecture and space –place

relationships

To impart knowledge about this relatively new field, born out of the synthesis between architecture and Culture

Course Overview:

To establish the linkages between the culture of a particular race of people and its manifestation in the architecture of that region.

Course Contents:

Unit Syllabus: Topic Subtopic

Teaching Hours:

ARCH 610: Internship III

Summer Internship: 4-5 Weeks (6 Hours/Day)

Course Educational Objectives (CEOs):

To allow the student to see how classroom concepts and skills are professionally practised.

To expose students to aspects of landscape architecture, planning, and design that are best experienced in practice.

Course outcomes (COs):

At the end of the course, students will be able to

Gain an understanding of workplace dynamics, professional expectations, and the influence of culture on both.

Build proficiency in a range of business or industry skills appropriate to the field of the internship placement, including professional and intercultural communication through written, verbal, and non-verbal means.; Refine and clarify professional and career goals through critical analysis of the internship experience or research project; Give academic value to the internship.; Add an analytical dimension to the overall experience; Encourage a professional approach to academic work

Expected Skills / Knowledge Transferred:

Ability to translate skills and knowledge of architecture acquired at university into a professional setting.; Knowledge of the professional practice of architecture.; Increased skills in performing tasks in a professional office; Increased ability to communicate in a professional setting; Increased understanding of the social and ethical role of the architect; Advanced skills in using software applications in a professional context

Focus: Professional training

By the end of this course, students will be able to articulate a reflection and draw personal insights related to their own beliefs and worldviews about individuals and society, based on the cultural and professional dimensions of their experience, namely:

what makes their company succeed – or not – in its field, how it operates as a community and in the community, what main issues it has to face, both internally and on the market;

what it takes to work in/with other cultures (and/or languages) and to adapt to an unfamiliar environment to be part or at the service of a new community, how to approach cultural differences in their daily experience and what they can learn from them, both about themselves and others – as individuals but also as part of a global world;

what they can bring to a professional environment, how they can draw skills from experience and process challenges, how they can contribute to a company's project and community;

who they are as a result of this growing process, in terms of civic-mindedness, cultural awareness, professional goals, and personal aspirations.

Course Overview:

Students will develop professional skills & understanding.

Course Contents:

Unit Syllabus: Topic Subtopic

Teaching Hours:

This course provides an opportunity for students to experience a working environment in an architecture firm in which to observe and apply their knowledge and skills for the degree. Projects will be negotiated between the School and the host organisation, involving students in a variety of design stages from preliminary design, design development, documentation, and presentation to a client. Students may also be involved in meetings, clerical work and administration to gain insight into the day-to-day functioning of a business. ;

Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

The course will be offered to students based on academic merit through a competitive application and interview process. Students must complete the course to the satisfaction of the host organisation and academic supervisor

I Analytical Approach

The general idea for this course is to encourage students to truly reflect on the varied subjects it covers, and not merely state facts and observations. The first crucial step for this consists in raising the right questions. Investigation (within the company, through research, through self-questioning) follows, allowing to find nuanced answers or further questions. Organized Outline This writing process is the opportunity to put into practice, a method consisting of organizing ideas in a structured outline. The format includes visible titles and subparts with explicit titles for all sections. Specific angles General Introduction The introduction will present the student's background, motivations and initial goals for the internship.

The Company and its Sector:

In this section, the student must show an insider's understanding of the organization, not only through a clear description of the company, what it does/offers, and how it operates internally, but also through an analysis of its strengths and weaknesses, of the general context in which it operates, of the challenges it faces, of its identity as a community and position in a border community. It should NOT be written in the first person.

The Intercultural Experience:

In this section, the student will account for his/her experience and understanding of cultural differences, both on a general scale, as a process of adjustment, and through specific examples related to human relationships, work environment and ethics, the vision of life or society and issues related to the sector.

The Professional Experience:

In this section, the student will recount his/her internship experience in terms of missions and tasks, but also in terms of accomplishments, challenges, lessons, developed skills or competencies, and contribution to the community.

General Conclusion

The conclusion will focus on the outcomes of this experience, how the student has evolved, what kind of professional they aspire to be and how this experience will impact future professional or personal choices. Assignments will be emailed as Microsoft Word documents. Methodological handouts and readings are available on Blackboard. Please note: it is the student's responsibility to organize their time and respect deadlines.

Sessional work: Guidelines

The place of the internship is to be finalised and displayed on the Institute Notice Board fifteen days in advance of the commencement of the vacation

Internship: During the internship phase (last four to five weeks of the program), students will be working at their internship placement for around 30 hours a week, from Mondays to Saturdays

Employment Requirements and Internship Initiation Summary:

- 1. Minimum of 4-5 weeks (summer semester) of full-time work. For summer interns, this allows securing a position as late as June 1st, and working until fall classes begin. Note that internships may begin as early as the year schedules can be arranged, providing a 7-8 Weeks opportunity as part-time
- 2. Must be under the supervision of a graduate Architect or other design professional. Registered Architects, Engineers, and Certified Planners also qualify.
- 3. Submit 2 copies of the Internship Program Application to the Internship Coordinator, before starting the internship.

Assignments:

The student will maintain field observations/record books.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; S - Studio; C - Credit;

Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

At least two exercises are to be done in the construction yard.

Each Unit should include a market survey and construction site to visit compulsorily with the studio working on sheets a minimum of 12 to 15 Nos A-1 Sheets

the internship should be supervised by a licensed or registered design professional (LA, Architect, Planner, Engineer). However, the qualification as a graduate design professional is also acceptable. • For Design-Build settings, there must be another landscape architect on the staff (if not registered, then someone with an LA degree). Internship work must have a design/office component, preferably at least 50% of the time. Credit is not given for "build" work only.

Arboretum/Botanical Garden settings must be supervised by an LA or professional horticulturist. An office component is desirable, but if the internship involves outdoor training, etc., there should be no problem.

- With unusual internship opportunities, it's required to talk with the Intern Coordinator ahead of time. If you are having trouble locating an internship, contact the Intern Coordinator. For year students and Grads: even if an internship has not been secured for the summer, advance enrols. If an internship is not secured, an incomplete will be given in the fall, allowing an additional year to satisfy the requirements. If you fall in this category, talk to the Internship Coordinator.
- Intended primarily to give students office experience, the program is flexible enough to allow a balance of both in the field and the office situations, if appropriate. Positions involving only site construction or maintenance, while valuable in their own right, are not permitted for internship credit.

Evaluation is to be done through viva voce by an external examiner appointed by the university at the Institute. Portfolios, after the university exam, shall be retained at the Institute level for the viva–voice

Evaluation: Stages: Proposal and on final submission of the paper /DOCUMENTATION of places visited Students contribute to the topic/area is of critical importance.

detailed out as per the academic calendar

a paper presentation on any subject of interest in the core or elective subjects.

The student needs to identify an area for research and in consultation with a guide propose first. On approval, this is to be developed through the summer and culminate as a research paper. Requirements (from students): Proposal, reviews, final presentation and paper.

a summer case study where the student has to select a built building by one of the architects and have a live document of the building and analyse the building and a word of the concept according to the architect.

Fraud Awareness

Evaluation

Students are reminded that to maintain the academic integrity of all programs and courses, the university has a zero-tolerance approach to students offering money or significant value goods or services to any staff member who is involved in their teaching or assessment. Students offering lecturers tutors or professional staff anything more than a small token of appreciation is unacceptable, in any circumstances. Staff members are obliged to report all such incidents to their supervisor/manager, who will refer them for action under the university's student disciplinary procedures.

Attendance Penalties For This Course*

1 absence from a workshop = 1 point off the course's final grade

1 absence from work (internship placement) = 1 point off the course's final grade

more than 3 unexcused absences = f for the course unsubmitted written work* = f(0 points) for the assignment in question

work handed in late = 1 point off the assignment per day

unsubmitted midterm evaluation = 2 points off the course's final grade

poorly filled out midterm evaluation = 1 point off the course's final grade

plagiarism = f(0 points) for the assignment in question

* past Friday – week 15 (11:59 pm), no written work will be accepted (grade for the assignment = 0).

Written Work

Total length for all assignments combined: 15 pages in English General goal These written assignments will cover all aspects of the internship experience: the company, the sector,

the intercultural experience, and the individual professional development. The final result will be a comprehensive account of the experience and its impact. Each section must incorporate elements related to the student's internship credits.

Submit at least bi-weekly reports during the internship (the form will be sent to the internship location, by the intern coordinator).

- 2. Paper A 2-page, single-spaced, paper describing your experience, specifically discussing office structure, clients, responsibilities, and accomplishments, is due the first Monday of the Month.
- 3. An 8 1/2" x 11" graphic brochure describing your place of employment with appropriate contact information is due the first Monday of the Month.
- 4. Mentoring Work with at least one student and assist them in focusing their search and acting as a resource. Identify students, contact them and meet with the Internship coordinator. Work with them to create a one-page plan by the first Monday of the Month.
- 5. Panel display A panel will be assigned for you to create an interesting display describing your internship and place of employment. This will be up for 2 weeks beginning It is the responsibility of the student to display and remove it promptly.

Course outcomes (COs):

At the end of the overall nurturing of the student with issues in practice and field outside course, students will

be able to

Expected Skills

Skills / better grooming than just books and theories.

Knowledge Transferred:

Focus: Manual Skills

The creative electives provide an opportunity to express talents that are different from architecture but related to imagination, visualization & creation. They offer hands-on experience of unique ingenuity & workmanship. The essence of a creative domain can be achieved by exploring different materials, techniques, and processes; developing creative products; and finishing & presenting the product for the concepts that evolved. The outcome will be through portfolio & presentations. As Per Pool Electives Choices Stage I odd semester pool

Course Overview:

The following is a representative list of Institute projects: Seminars, Tutorials/ additional classes for any course, Guest Lectures, Workshops, Providing knowledge to support students being sensitive to design;

Sessional work:

Guidelines The topic of the project is to be displayed on the Institute Notice Board fifteen days

in advance OF the commencement of the classes

Assignments /Tasks are to be set from the entire syllabus; The topic of the project is to be displayed on the Institute Notice Board fifteen days - a week time in advance OF

the commencement of the classes

Assignments: One Major And the rest minor tasks are to be set from the entire syllabus

Evaluation is to be done through viva voce by an external examiner appointed by the university at the Institute. Portfolios, after the university exam, shall be retained

at the Institute level for the viva-voice

Understand methods of reuse of materials

Waste Prevention; Concept of waste prevention; Resource Efficiency & Resource Efficient BuildingMaterials Case study and presentation to explain the same

Construction and Demolition Recycling; Construction and Demolition Materials Recovery & Debris Analysis; Recycling Economics; Architectural Reuse i.e. Architectural Reuse, Design for Reuse Case study and presentation to explain the same

Design from used materials; Prepare design drawings & models from used materials • Large-scaled model of design; Prepare installation

Wann David. (1996). Deep Design: Pathways to a Livable Future. Washington: Island Press. Sim Van der Ryn and Stuart Cowen. (1996). Ecological Design. Washington: Island Press

ARCH 619.2: Intelligent buildings

Course Outcomes At the end of the course, students will be able to –

Understand the concept of intelligent buildings.

Explore features of intelligent buildings and service systems.

Develop the capacity of Experiencing Space in Time & Motion.

Intelligent building characteristics: - Features and benefits of intelligent buildings. - The anatomy of intelligent buildings. - Environmental aspect. - The marketplace and other driving forces behind the emergence of intelligent buildings.

Building automation systems & controls - Philosophy, system configuration, system modules, distributed systems, communication protocol and online measurements. - Fire protection, security and energy management. Control objectives. Sensors, controllers and actuators. Control system schematics system design. Microprocessor-based controllers & digital controls. Examples of sub-systems such as Digital - Addressable Lighting Interface (DALI)

Modern intelligent vertical transportation systems: -Sky lobby, double-deck lifts, twin lifts, advanced call registration systems, large-scale monitoring systems, applications of artificial intelligence in supervisory control, energy-saving measures related to lifting systems/escalator systems, and other modern vertical transportation systems such as gondola systems, materials handling systems, etc.

Communication and security systems: -Voice communication systems, local area network, wireless LAN, - Digital TV, CCTV, digital CCTV, teleconferencing, cellular phone system, and CABD. SMART. Data networking. Short- and long-hauL networks. -Wideband network. Office automation. Public address/sound Reinforcement systems. Digital public address system. Modern security systems

Structured cabling systems: Characteristics and benefits. Standards, configurations and physical media. EMI/EMC issues, grounding problems. System design. Different Categories of cables.

Integrating infrastructure technologies and systems: The impact of information technology on buildings and people. Shared tenant services. Interaction and integration between building structure, systems, services, management, control and information technology. Application & design software packages.

ARCH 619.3: Design with Ferro cement

Course Outcomes At the end of the course, students will be able to –

Explore behavior and structural property of Ferro-cement

Learn about the Ferro-cement structures from concept to actual construction

Apply knowledge to design the Ferro-cement structures

Process of building structure Structure and Structure form What are Structure and its importance in Architecture? Structural form - solid, Surface, skeleton, Membrane, hybrid Structural form - in Nature Structural form - man-made Structural material strength, stiffness, shape

The broad categorization of structural system Structure types Membrane - Cable/membrane surface, cable nets, pneumatics Hybrids - Tension-assisted structures

States of stresses Vertical, Horizontal, Rational settlement and earthquake behavior

Basic requirements of structure Structural Element behaviour Tensile, compressive, shear,

torsion, bending Model testing and discussion on why it fails?

Design with Ferro cement

Types of loads & supports Load on Structure Permanent - Temporary dead load, imposed load, thermal load, Dynamic load
