

DEGREE PROGRAM

B.Sc.VSem.

SUBJECT CODE BSPH502				Т	EACHIN	G &EVA	LUATIO	ON SCH	EMF	2	
			1	THEORY		PRACT	TICAL				
	Category	SUBJECT NAME	End Sem Uni- versity Exam	Two Term Exam	Teac hers As- sess- ment *	End Sem Uni- versi- ty Exam	Tea cher s As- sess men t*	Th	Т	Р	CREDITS
BSPH502	DC	QUANTUM MECHANICS	60	20	20	30	20	3	1	4	6

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; Q/A – Quiz/Assignment/Attendance, MST MidSem Test.

*Teacher Assessment shall be based on following components: Quiz/Assignment/ Project/Participation in class (Given that no component shall be exceed 10 Marks)

Course Objectives:-

- 1. To develop the comprehensive understanding of laws of physics related to Quantum Mechanics and ability to apply them for laying the foundation for research and development.
- 2. To work ethically as member as well as leader in a diverse team.

Course Outcomes:-

- 1. Student will be able to understand and solve the problems related toQuantum Mechanics,
- 2. Student will be able to determine physical parameter experimentally with optimal usage of resources and complete the assignments in time.

Shri Vaishnav VidyapeethVishwavidyalaya, Indore

QUANTUM MECHANICS

UNIT-I

Particles and waves inadequacies in classical physics, Blackbody radiation: quantum theory of light. Photoelectric effect, Compton Effect, Wave nature of matter: de Broglie hypothesis. Wave-particle duality, Davisson-germer experiment, Wave description of particles by wave packets.Group and phase velocities and relation between them, Two-slit experiment with electrons. Probability, Wave amplitude and wave functions

UNIT-II

Heisenberg's uncertainty principle (uncertainty relations involving canonical pair of variables): derivation from wave packets. Energy, momentum and Hamiltonian operators, Time-independent Schrodinger wave equation for stationary states, Properties of wave Function. Interpretation of wave function, Probability density, Conditions for physical acceptability of wave functions, .Linearity and superposition Principles, Eigen values and Eigen functions

UNIT-III

Expectation values, Wave function of a free Particle. Applications of Schrödinger wave equation: Eigen functions and Eigen values for a particle in a one dimensional box. general features of a bound Particle system, (1) one dimensional Simple harmonic oscillator: energy levels and wave Functions. Zero point energy, (2) Quantum theory of hydrogen atom: particle in a spherically symmetric potential.

UNIT-IV

Schrodinger wave equation, Separation of variable, .Radial solutions and principal quantum Number, orbital and magnetic quantum numbers, Quantization of energy and Angular Momentum, Space quantization, Electron probability Density.

UNIT-V

Finite Potential Step: Reflection and Transmission. Stationary solutions, Probability current, Attractive and repulsive potential Barriers (2) Quantum phenomenon of tunneling: tunnel effect. Tunnel diode (qualitative Description) (3) Finite potential well (Square well)

Suggested books:

1. L. I. Schiff, quantum mechanics, 3rd Edition, (McGraw hill book co., New York 1968).

2. E. Merzbacher, quantum mechanics, 3rd Edition, (john Wiley & sons, inc1997)

3. J.l. Powell & b. Crasemann, quantum mechanics, (Addison-Wesley pubs.co., 1965)

4. A. Ghatak& s. Lokanathan, quantum mechanics: theory and applications, 5th Edition, (Macmillan India, 2004)

5. E. M. Lifshitz and I. D. Landau, quantum mechanics: non-relativistic theory (course of Theoretical physics, vol 3), 3rd Edition, butterworth-heinemann (1981).

<u>Shri Vaishnav Vidyapeeth Vishwavidyalaya</u>

<u>Bachelor of Science (Electronics)</u> <u>SEMESTER V</u>

SUBJECT CODE				Т	EACHIN	G &EVA	LUATIO	N SCH	IEME]				
			J	THEORY		PRAC	FICAL				CREDITS 4			
	Category	SUBJECT NAME	END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*	Th	Т	Р	CREDITS			
BSEL503	Electronics	Electronics V (Electronic Communication Systems)	60	20	20	0	0	3	1	0	4			

Legends: Th-Lecture; T-Tutorial/Teacher Guided Student Activity; P–Practical; C-Credit; *Teacher Assessmentshall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objective:

To provide the fundamental aspects of antennas, their principle of operation and their applications and also to learn the basic theory pertaining to analog and digital modulation and learn about advance communication systems and their application.

Course Outcome:

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes. The student will be able to:

CO1:- Acquainted with fundamentals of antenna, their characteristics and types

CO2:- Amplitude modulation and demodulation and radio wave transmission and reception.

CO3:- Frequency modulation and demodulation and FM radio wave transmission and reception.

CO4:- Principle of analog and digital pulse modulation and their applications. Transmission and detection of digital signals

SYLLABUS:

UNIT-I: FUNDAMENTALS OF ANTENNA

Definition of antenna parameters – Radiation Pattern, Gain, Directivity, Efficiency, Beam width, Polarization. Dipole Antenna, Folded dipole Antenna, Yagi-Uda antenna, Horn antenna , Parabolic Reflector antenna and its Feeding structures. Radio Wave Propagation and its Modes.

<u>Shri Vaishnav Vidyapeeth Vishwavidyalaya</u> <u>Bachelor of Science (Electronics)</u> <u>SEMESTER V</u>

UNIT II: AMPLITUDE MODULATION

Modulation, Need for Modulation, Types of Modulation, Amplitude Modulation –Time domain and frequency domain representation, Generation and Detection Circuit: Balance Modulator for DSB-SC, Frequency Discrimination Method for SSB-SC Modulation, Envelope Detector. Super heterodyne Receiver.

UNIT III FREQUENCY MODULATION

Frequency Modulation:- Time domain representation of FM, Types of FM, Generation and Detection of FM:-Direct Method, Slop Detector, Foster Seeley Discriminator, Phase Locked Loop (PLL), Filter: Low pass filter and High pass filter, Pre-emphasis and De-emphasis in FM, Multiplexing: Time Division and Frequency Division.

UNIT IV: PULSE MODULATION

PAM, PPM, PWM, Sampling Theorem, Quantization, Pulse Code Modulation (PCM), Generation and Detection of Delta Modulation (DM), Error in DM, Adaptive Delta Modulation (ADM). Advantages of Digital Communication. Overview of Digital Modulation Techniques: ASK, PSK, FSK.

UNIT V: ADVANCE COMMUNICATION

Microwave- Introduction to Microwave, Frequency Bands, Advantages, Applications. Optical Communication- Optical fiber modes, transmission characteristic. Basics of Satellite Communication, Cellular and Mobile Communication:- Concept of frequency reuse, Handoff. RADAR- Range Equation, Evolution of Wireless Generation.

CO3:- Frequency modulation and demodulation and FM radio wave transmission and reception.

CO4:- Principle of analog and digital pulse modulation and their applications. Transmission and detection of digital signals

SYLLABUS:

List of Practicals:

- 1. Demonstration of antenna trainer kit and studying antenna parameters, Radiation pattern, Beam width, Directivity, Gain.
- 2. To plot and compare the radiation pattern of folded dipole with and without reflector.
- 3. To plot the radiation pattern of parabolic reflector antenna and Yagi Uda antenna.

<u>Shri Vaishnav Vidyapeeth Vishwavidyalaya</u> <u>Bachelor of Science (Electronics)</u> <u>SEMESTER V</u>

- 4. Performance analysis of amplitude modulation and demodulation.
- 5. Implementaion of frequency modulation and demodulation in MATLAB.
- 6. Analysis of pulse modulation techniques as PAM, PPM and PWM.
- 7. Implement PCM using MATLAB.
- 8. Implement Delta modulation using MATLAB.
- 9. Demonstrate digital modulation techniques as ASK, PSK and FSK.
- 10. Demostartion of microwave test bench.

Name of the Program: B. Sc. (Plain)

BSMA 504	DC	Numerical Methods	(0)	20	20			2	1		4
D 3IVIA 304	DC	& Linear	60	20	20	-	-	3	1	-	4
		Programming									

Course Objective

To introduce the students with the Fundamentals of the Numerical Methods & Linear Programming.

Course Outcomes

After the successful completion of this course students will be able to

- 1. understand and solve problems of the straight lines in 3D.
- 2. solve the problems of the planes.
- 3. know the solution of the problems of the spheres.
- 4. understand and apply the concepts of the algebra of the Right circular cone.

Course Content:

UNIT – I

Approximate numbers, Significant figures, Rounding off numbers. Error – Absolute, Relative and Percentage. **Operators** - Δ , ∇ and E (Definitions and some relations among them).**Interpolation :** The problem of Interpolation, Equispaced arguments – Difference Tables, Deduction of Newton's Forward Interpolation Formula. Remainder term (expression only). Newton's Backward Interpolation formula (statement only) with remainder term. Unequally – spaced arguments –Lagrange's Interpolation Formula (statement only). Numerical problems on Interpolation with both equi- and unequally-spaced arguments.

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore

Name of the Program: B. Sc. (Plain)

UNIT – II

Number Integration: Trapezoidal and Simpson's ¹/₃rd formula (statement only). Problems on Numerical Integration. **Numerical Solution of Equation:** To find a real root of an algebraic or transcendental equation. Location of root (Tabular method), Bisection method. Newton-Raphson method with geometrical significance. Numerical problems.

UNIT – III

Linear Programming: Motivation of Linear Programming problem. Statement of L.P.P. formulation of L.P.P. Slack and Surplus variables. L.P.P. is matrix form. Convex set, Hyperplane, Extreme points, Convex Polyhedron, Basic solutions and Basic Feasible Solutions (B.F.S.) Degenerate and Non-degenerate B.F.S. The set of all feasible solutions of an L.P.P. is a convex set. The objective function of an L.P.P. assumes its optimal value at an extreme point of the convex set of feasible solutions. A B.F.S. to an L.P.P. corresponds to an extreme point of the convex set of feasible solutions.

UNIT – IV

Fundamental Theorem of L.P.P. (Statement only). Reduction of a feasible solution to a B.F.S. Standard form of an L.P.P. Solution by graphical method (for two variables), by simplex method and method of penalty. Concept of duality. Duality theory. The dual of the dual is the primal. Relation between the objective values of dual and the primal problems. Dual problems with at most one unrestricted variable, one constraint of equality.

UNIT – V

Transportation and Assignment problems and their optimal solutions.

Texts:

- 1. Numerical methods E. Balagurusamy (Tata McGraw Hill).
- 2. Introduction to numerical analysis F. B. Hilderbrand (TMH Edition).
- 3. Numerical Analysis J. Scarborough.
- 4. Introduction to numerical analysis Carl Erik Froberg (Addison Wesley Publishing).
- 5. Numerical methods for science and engineering R. G. Stanton (Prentice

Hall).

- 6. Linear Programming : Method and Application S. I. Gass.
- 7. Linear Programming G. Hadley.

8. An Introduction to Linear Programming & Theory of Games – S. Vajda.

Name of the Program: B. Sc. (Plain)

BSMA 505	DC	Any one of the following groups : Group A : Analytical Dynamics Group B : Probability & Statistics	60	20	20	-	-	3	1	-	4

Group A: Analytical Dynamics

Course Objective

To introduce the students with the Fundamentals of the Analytical Dynamics.

Course Outcomes

After the successful completion of this course students will be able to

- 1. understand and solve problems of the motion of a particle.
- 2. solve the problems of the motion under forces.
- 3. understand and apply the concepts of the motion in 2D.

Course Content:

UNIT – I

Velocity and Acceleration of a particle. Expressions for velocity and acceleration in rectangular Cartesian and polar co-ordinates for a particle moving in a plane. Tangential and normal components of velocity and acceleration of a particle moving along a plane curve.

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore

Name of the Program: B. Sc. (Plain)

UNIT – II

Concept of Force: Statement and explanation of Newton's laws of motion. Work, power and energy. Principles of conservation of energy and momentum. Motion under impulsive forces. Equations of motion of a particle (i) moving in a straight line, (ii) moving in a plane.

UNIT – III

Study of motion of a particle in a straight line under (i) constant forces, (ii) variable forces (S.H.M., Inverse square law, Damped oscillation, Forced and Damped oscillation, Motion in an elastic string). Equation of Energy. Conservative forces.

UNIT – IV

Motion in two dimensions : Projectiles in vacuo and in a medium with resistance varying linearly as velocity. Motion under forces varying as distance from a fixed point.

UNIT – V

Central orbit. Kepler's laws of motion. Motion under inverse square law.

Texts:

1. An Elementary Treatise on the Dynamics of a Particle & of Rigid bodies – S.

L. Loney (Macmillan).

2. Dynamics of Particle and of Rigid Bodies – S. L. Loney.

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore Name of the Program: B. Sc. (Plain)

Group B: Probability & Statistics

Course Objective

To introduce the students with the Fundamentals of the Probability & Statistics.

Course Outcomes

After the successful completion of this course students will be able to

- 1. understand and solve problems of the motion of a particle.
 - 2. solve the problems of the motion under forces.
 - 3. understand and apply the concepts of the motion in 2D.

Course Content:

UNIT – I

Elements of Probability Theory: Random experiment, Outcome, Event, Mutually Exclusive Events, Equality like and Exhaustive, Classical definition of Probability, theorems of Total Probability, Conditional Probability and Statistical Independence. Bayes' theorem. Problems. Shortcomings of the classical definition. Axiomatic approach –Problems. Random Variable and its Expectation. Theorems on mathematical expectation. Joint distribution of two random variables. Theoretical Probability Distribution – Discrete and Continuous (p.m.f. pd.d.f.) Binomial, Poisson and Normal distributions and their properties.

UNIT – II

Elements of Statistical Methods. Variables, Attributes, Primary data and secondary data. Population and sample. Census and Sample Survey. Tabulation – Chart and Diagram, graph, Bar diagram, Pie diagram etc. Frequency Distribution – Un-grouped and grouped cumulative frequency distribution. Histogram, Frequency curve, Measure of Central Tendencies – Average : AM, GM, HM, Mean, Median and Mode (their advantages and disadvantages). Measures of Dispersions – Range, Quartile Deviation, Mean Deviation, Variance/S.D., Moments, Skewness and Kurtosis.

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore

Name of the Program: B. Sc. (Plain)

UNIT – III

Sampling Theory: Meaning and objects of sampling. Some ideas about the methods of selecting samples. Statistic and Parameter, Sampling Distribution – standard error of a statistic (e.g. sample mean, sample proportion). Four fundamental distributions derived from the normal : (i) Standard Normal Distribution, (ii) Chi-square distribution, (iii) Student's distribution, (iv) Snedecor's F-distribution.

UNIT – IV

Estimation and Test of Significance. Statistical Inference. Theory of estimation – Point estimation and Interval estimation. Confidence Inter/Confidence Limit. Statistical Hypothesis – Bull Hypothesis and Alternative Hypothesis. Level of significance. Critical Region. Type I and Type II error. Problems. Bivariate Frequency Distribution. Scatter Diagram, Correlation co-efficient –Definition and properties. Regression lines.

UNIT – V

Time Series : Definition. Why to analyze Time series data? Components. Measurement of Trend – (i) Moving Average Method, (ii) Curve Fittings (linear and quadratic curve). (Ideas of other curves, e.g. exponential curve etc.). Ideas about the measurement of other components. **Index Number :** Meaning of Index Number. Construction of Price Index Number. Consumer Price Index Number. Calculation of Purchasing Power of Rupee.

Texts:

- 1. The elements of probability theory and some of its applications H. Cramer.
- 2. An introduction to probability theory and its applications (Vol. 1) W. Feller.
- 3. Mathematical methods of statistics H. Cramer.
- 4 Theory of probability B. V. Gnedenko.
- 5. Mathematical probability J. V. Uspensky.
