MTCE 1101	BS	ADVANCE MATHEMATICS AND NUMERICAL ANALYSIS	60	20	20	0	0	3	0	0	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objectives:

The course aims to provide students with the specialist knowledge in advanced Numerical Analysis. With this overall aim, the course strives to enable students to: Understand analytical, developmental and technical principles that relate to Numerical Linear Algebra, Numerical Methods for solving Differential Equations, and Numerical Optimization, develop the academic abilities required to solve problems and applications in Numerical Analysis and/or Numerical Optimization and critically assess relevant aspects of the industry, and demonstrate an ability to initiate and sustain in-depth research in Numerical Analysis or Numerical Optimization.

Course Outcomes:

1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Apply numerical methods to obtain approximate solutions to mathematical problems.
3. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.
4. Analyse and evaluate the accuracy of common numerical methods.

Syllabus:

UNIT I

Numerical solution of Partial Differential Equation (PDE): Numerical solution of PDE of hyperbolic, parabolic and elliptic types by finite difference method.

UNIT II

Integral transforms: General definition; Introduction to Mellin, Hankel and Fourier transforms and fast Fourier transforms, application of transforms to boundary value problems in engineering.

Chairperson
Board of Studies

Indore

Joint Registrar
Shri Vaishnav Vidyapeeth
Vishwavidyalaya, Indore

Shri Vaishnav Vidyapeeth Vishwavidyalaya

Master of Technology (Structural Engineering)

SEMESTER I

UNIT III

Integral equations: Conversion of Linear Differential equation (LDE) to an integral equation (IE); Conversion of boundary value problems to integral equations using greens function; Solution of integral equation, IE of convolution type, Abels IE, integral differential equations, IE with separable variable, solution of Fredholm; Equation with separable kernels; Solution of Fredholm and Volterra equations by method of successive approximations.

UNIT IV

Calculus of Variation: Functional and their variation; Eulers equation for function of one and two independent variables; Application to engineering problems.

UNIT V

FEM: Variational functional; Euler Lagrange's equation; Variational forms; Ritz methods, Galerkin's method; Descretization; Finite elements method for one dimensional problems.

Text Books:

1. Higher Engineering Mathematics by B.V. Ramana, Tata Mc Hill.
2. Advance Engineering Mathematics by Ervin Kreszig, Wiley Easten Edd.
3. Applied Numerical Methods with MATLAB by Steven C Chapra, TMH
4. Numerical Methods in engineering, Salvadori and Baron

Reference Books:

1. CF Froberg, Introduction to numerical analysis.
2. SS Sastry, Introductory methods of numerical analysis
3. Krasnove, Kiselevandened Makarenho, Integral equations
4. Buchanan, Finite element Analysis (schaum Outline S), TMH
5. Krishnamurthy, Finite element analysis, TMH

MTCE 1102	DCS	ADVANCE CONCRETE TECHNOLOGY	60	20	20	30	20	2	1	2	4

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objectives:

1. To understand the concrete material and their mechanism.
2. To study the Creep in detail.
3. To study about the fresh concrete and the strength
4. To study the durability and the hardness of concrete.

Course Outcomes:

1. To have the deep knowledge of concrete material
2. To know the characteristics of fresh concrete
3. To know about creep and to analyze it
4. To have the deep knowledge about the test on hard concrete

Syllabus:

UNIT I

Cement and cement properties; Properties of fresh concrete; Compaction of concrete; Curing of concrete.

UNIT II

Properties of hardened concrete; Strength characteristic; Shrinkage; Creep; Durability; Fatigue

UNIT III

Permeability and durability of concrete; Special concrete and their properties

UNIT IV

Concrete for low and high temperatures; Air entrained concrete; High performance concrete

UNIT V

Mix Design, Non destructive Testing of Concrete.

Shri Vaishnav Vidyapeeth Vishwavidyalaya

Master of Technology (Structural Engineering)

SEMESTER I

Text Books:

1. A.M. Neville, Concrete Technology, ELBS, London
2. M.L. Gambhir, Concrete Technology, Tata Mc Graw Hill Book Co.

Reference Books:

1. Peurifoy R.L., Construction Planning Equipment & Methods, TMH
2. Verma Mahesh, Construction Equipments and its Planning & Application

List of Practicals:

1. To determine fineness of cement by dry sieving
2. To determine the normal consistency of a given sample of cement.
3. To determine the initial and final setting time of a given sample of cement.
4. To determine bulking of aggregate.
5. To determine specific gravity of a given sample of fine aggregate.
6. To determine particle size distribution of coarse aggregates by sieving or screening
7. To determine the impact value coarse aggregates.
8. To determine the relative consistency of freshly mixed concrete by the use of Slump test.
9. Determination of compressive strength of concrete specimens
10. Determination of flexural strength of moulded concrete specimens.
11. To assess the likely concrete by using rebound hammer

Shri Vaishnav Vidyapeeth Vishwavidyalaya

***Teacher Assessment** shall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objectives:

Student (A) will be able to analyze various loads acting on structure and design different components of RCC structure (B) at particular site (C) economically & safely.

Course Outcomes:

1. To provide a coherent development to the students for the courses in sector of reinforced concrete designing.
2. To present the foundations of many basic engineering concepts related designing of structures.
3. To give an experience in the implementation of designing concepts which are applied in field of structural engineering
4. To involve the application of scientific and technological principles of design of buildings according to limit state method of design

Syllabus:

UNIT I

Design Philosophies: Introduction to various design philosophies; Merits and drawbacks of design philosophies; Code provision and their meaning; Introduction to pre-stressed concrete.

UNIT II

Grid Structures: Types of R.C.C Grids; Behaviour; Design by approximate and exact methods.

UNIT III

Flat Slab: Definition; Types; Behaviour; Direct design method; Equivalent frame method.

UNIT IV

Circular Cylindrical Shells: Behaviour and design using ASCE Manual Method.

Shri Vaishnav Vidyapeeth Vishwavidyalaya

Master of Technology (Structural Engineering)

SEMESTER I

UNIT V

Concept of ductility; Detailing for ductility; Design of beams and columns for ductility; Design of cast-in-situ joints in frames

Text Books:

1. Shah and Kale, Text book of reinforced concrete, Publisher, McMillan Company of India., 1984
2. B.C. Punamia, RCC designs, Laxmi Publications.

Reference Books:

1. Krishna Raju, Prestressed Concrete, Tata McGraw-Hill Education
2. Varghese, Advanced RC Designs, PHI
3. Everard, Theory and problems of RC design (Shaum's Outline S), Tata McGraw-Hill Education

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objectives:

The objectives of the course are to build on the student's knowledge on the theory and application of structures in buildings and to introduce the students to concept of structural stability, methods in structural analysis.

Course Outcomes:

1. Ability to analyze statically determinate trusses, beams, and frames and obtain internal loading
2. Ability to analyze cable and arch structures
3. Ability to obtain the influence lines for statically determinate and indeterminate structures
4. Ability to determine deflections of beams and frames using classical methods
5. Ability to solve statically indeterminate structures using classical methods
6. Ability to solve statically indeterminate structures using matrix (stiffness) method

Syllabus:

UNIT I

Matrix Method (Flexibility Method): Force methods; Basic concepts; Evaluation of flexibility; transformation; Analysis of a single member of different types; Transformation of single member.

UNIT II

Applications to plane and space structures with pin joints and rigid joints; Energy approach in flexibility method; Effect of support displacement and transformation

;

UNIT III

Matrix Method (stiffness Method): Displacement methods; Basic concepts; Evaluation of stiffness coefficients; Direct stiffness method; Energy approach in stiffness method; Effect of support displacement and temperature.

Shri Vaishnav Vidyapeeth Vishwavidyalaya

Master of Technology (Structural Engineering)

SEMESTER I

UNIT IV

Symmetrical and anti-symmetrical problems; Stiffness of plane and space frames solution of problems; Comparison of force and displacement methods of solution

UNIT V

Space Frame: Tension coefficient method for analysis of pin jointed structural frames.

Text Books:

1. C.S. Reddy, Basic Structural Analysis, TMH, Publishers
2. W Wearer Jr. & James M. Gere, Matrix Analysis of Framed Structures, CBS Publication

Reference Books:

1. Rajsekeran, Sankarsubramanian, Computational structural Mechanics, PHI

MTCE 1105(1)	DCS	THEORY OF ELASTICITY AND PLASTICITY	60	20	20	0	0	2	1	0	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objectives:

1. To impart knowledge of Principal stresses and strains.
2. To develop analytical skills of solving problems using plain stress and plain strain.
3. To impart knowledge of engineering application of plasticity.

Course Outcomes:

1. The students shall be able to demonstrate the application of plane stress and plane strain in a given situation.
2. The student will demonstrate the ability to analyze the structure using plasticity.
3. To impart the knowledge of stress-strain relations for linearly elastic solids, and Torsion.

Syllabus:

UNIT I

Plane Stress & Plane Strain: Plane Stress; Plane Strain; Stress and Strain at a points; Differential equations of equilibrium; Anisotropic materials; Linear elasticity; Stress, strain, Constitutive relations; Boundary conditions; Generalised Hooke's law; Elastic Constants; Compatibility equation; Stress function.

UNIT II

Two Dimensional Problems in Rectangular Co-ordinates: Solutions by Polynomials; Saint-Venant's Principle; Determination of displacements; Bending of beams; Solution of two dimensional problems in Fourier series

UNIT III

Two Dimensional Problems in Polar Coordinates: General equations in Polar coordinate; Pure bending of curved bars; Analysis of stress and strain in three dimensions; Principal stress and strain; Shearing stress and strains; Elementary equation of equilibrium; Compatibility conditions

Shri Vaishnav Vidyapeeth Vishwavidyalaya

Master of Technology (Structural Engineering)

SEMESTER I

UNIT IV

Theory of Plasticity: Basic experiments of monotonic loading tension and compression tests; Loading-Unloading reloading types; Loading-Unloading reverse loading types and their observations; Definition of nominal stress, strain, true stress, natural Strain etc and their relations; Bauschinger's effects; Strain hardening; Stress strain curve and their empirical equations.

UNIT V

Stress and strain tensors; Principal stresses and strains; Stress and strain invariants; Maximum and octahedral shear stresses and strains; Stress and strain deviator tensor; assumptions; Yield Criteria like Rankine's, Saint Venant's, Trescas and Von mises and their two Dimensional representation; Failure Theories.

Text Books:

1. Timoshenko, S.P., Theory of Elasticity, McGraw Hill Book Company.
2. Iyenger N.G.R., Structural Stability of Columns & Plates, Prentice Hall

MTCE 1105(2)	DCS	THEORY OF VIBRATIONS	60	20	20	0	0	2	1	0	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objectives:

The objective of this course is to cover comprehensive fundamental principles of vibration theory. Formulate mathematical models of problems in vibrations using Newton's second law or energy principles. Determine a complete solution to mechanical vibration problems using mathematical or numerical techniques, and Determine physical and design interpretations from the results.

Course Outcomes:

1. Students will be able to construct the equations of motion from free-body diagrams.
2. Students will be able to solve for the motion and the natural frequency of a freely vibrating single degree of freedom un-damped motion and a freely vibrating single degree of freedom damped motion.
3. Students will be able to construct the governing differential equation and its solution for a vibrating mass subjected to an arbitrary force.
4. Students will be able to decompose any periodic function into a series of simple harmonic motions using Fourier series analysis.
5. Students will be able to solve for the motion and the natural frequency for forced vibration of a single degree of freedom damped or un-damped system.
6. Students will have an ability to obtain the complete solution for the motion of a single degree of freedom vibratory system (damped or un-damped) that is subjected to non-periodic forcing functions.
7. Students will be able to solve vibration problems that contain multiple degrees of freedom.
8. Students will be able to obtain design parameters and indicate methods of solution for a complicated vibratory problem.

Syllabus:

UNIT I

Single degree of freedom system; Free and forced vibrations; Linear Viscous Damper; Coulomb Damper; Response to harmonic excitation; Rotating unbalance and support excitations; Vibration isolation and transmissibility; Single degree of freedom system as vibro-meter and accelerometer; Response to periodic and arbitrary excitation.

Shri Vaishnav Vidyapeeth Vishwavidyalaya

Master of Technology (Structural Engineering)

SEMESTER I

UNIT II

Duhamel's integral; Impulse response function; Laplace transform Fourier transform methods; Frequency response function; Phase-Plane techniques; Critical speed of rotors; Energy methods; Rayleigh's method; Equivalent viscous damping

UNIT III

Two degree of freedom system; Matrix Formulation; Free Vibration; Beat phenomenon; Principle of damped and un-damped vibration absorbers

UNIT IV

Multi degree of freedom system; Matrix formulation; Stiffness and flexibility influence coefficients; Eigen value problem; Normal modes and their properties; Matrix iteration technique for Eigen value and Eigen vectors; Free and forced vibration by modal analysis.

UNIT V

Continuous System; Axial vibration of bar; Torsion of shafts; Transverse vibration of strings and bending vibration beams; Forced vibration; Normal mode method; Lagrange's equation; Approximate methods of Rayleigh-Ritz, Galerkin's etc.

Text Books:

1. Dynamics of structures, by Ray W. Clough and Joseph Penzien, 2nd edition, McGraw-Hill, New York
2. Theory of Vibration with Applications, William Thomson, CRC Press

Reference Books:

1. Structural Dynamics: Theory and Computation, Mario Paz Springer Science & Business Media
2. Dynamics of Structures: Theory and Applications to Earthquake Engineering, Anil K. Chopra, Prentice Hall, 2000

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Outcomes:

At the end of the course, students will be able to

1. Determine stability of columns and frames
2. Determine stability of beams and plates
3. Use stability criteria and concepts for analyzing discrete and continuous systems,

Syllabus:

UNIT I

Buckling of Columns; States of equilibrium; Classification of buckling problems; Concept of equilibrium, energy, imperfection and vibration approaches to stability analysis; Eigen value problem; Governing equation for columns; Analysis for various boundary conditions

UNIT II

Buckling of Beam-Columns and Frames; Theory of beam column; Stability analysis of beam column with single and several concentrated loads; Distributed load and end couples; Analysis of rigid jointed frames with and without sway; Moment distribution; Slope deflection and stiffness method.

UNIT III

Torsional and Lateral Buckling; Torsional buckling; Torsional and flexural buckling; Local buckling; Buckling of Open Sections; Numerical solutions; Lateral buckling of beams; Pure bending of simply supported beam and cantilever.

UNIT IV

Buckling of Plates; Governing differential equation; Buckling of thin plates; Various edge conditions; Analysis by equilibrium and energy approach; Approximate and numerical techniques

UNIT V

Inelastic Buckling; Double modulus theory; Tangent modulus theory; Shanley's model; Eccentrically loaded inelastic column; Inelastic buckling of plates; Post buckling behaviour of plates
