Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit.

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

- (A) To expose to the students, the different techniques of metal cuttings & machining processes.
- (B) To provide to the students an understanding and appreciation of the gears and thread manufacturing processes.
- (C) To provide a proper insight about the importance of jigs and fixtures used in production technology.
- (D) To provide the students with a proper understanding of non-traditional machining processes.

Course Outcomes (COs):

1. Students will be able to apply basics of metal machining processes very well with the detailed signature of tools.
2. Students able to understand different casting processes and able to apply knowledge to economical production processes.
3. Students can be able to grasp distinctive knowledge of press working and other fabrication processes.
4. Students will be able to understand the rolling and extrusion and other metal forming processes.
5. Students can understand about various joining processes.

Syllabus: -

UNIT-I

8 Hrs.

Manufacturing Processes: Definition and classification of basic manufacturing processes. Metal cutting process: Machine tool and cutting tool. Operations and parts of various metal cutting machines such as Lathe, shaper, milling planer, drilling, and grinding machine. Equipment used and safety precautions for handling such machines in

Diploma in Mechanical Engineering (2021-2024)

industry.

UNIT -II

8 Hrs.

Metal Casting: Introduction of casting process; Definition of pattern, their types, material selection and allowances; Molding-Definition, types of molds, molding materials, molding sand, and its composition; testing parameters of sand and their effects; sand preparations, sand conditioning, characteristics, and defects of mold; Function of runners, risers, gate, and Core. Casting defects, causes, remedies.

UNIT – III

7 Hrs.

Press Working: Introduction of press working of metals; principle of press working; press working operations-punching, shearing, drawing, bending, slitting, knurling, notching, trimming, and piercing (brief description); Double action press; description and its field of application, types of dies; specifications of a press; safety precautions to be observed while working on a press.

UNIT – IV

8 Hr.

Mechanical Working: Introduction of hot and cold working; advantages and limitations; Metal Rolling; Principle of metal rolling; basic components of a simple rolling process equipment; Types of rolling mill; Rolling defects; Metal Drawing; Extrusion; Types of extrusion; Extrusion defects; forging-Types of forging, die forging, differentiate between the cold die and hot die forging; Limitations of forging, drop forging and upset forging.

UNIT -V

7 Hrs.

Metal Joining: Introduction; Classification of metal joining processes; Welding classification. Resistance Welding-Spot, seam, butt, projection, and percussion techniques; Gas welding and gas cutting-Principle of operation, working and applications; Arc Welding-TIG, MIG, Submerged arc, atomic hydrogen, Electro-slag, and Plasma arc welding; Electrodes- types and selection; flux and their uses; Defects in welds; Soldering, Brazing.

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

(A) This subject aims at introduction of basic concepts, laws & principles of thermodynamics. (B) It covers the zeroth, first and second law of thermodynamics and heat transfer. (C) It also includes the basic principles and applications of air compressors & steam generation & steam process

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills, and attitudes

1. To understand the laws of thermodynamics and its applications.
2. To understand the different modes of heat, transfer in practical applications.
3. To understand the working and applications of various air compressors.
4. To understand the process of steam generation & steam process

Syllabus

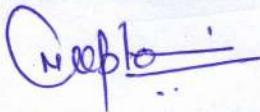

UNIT-I

8 Hr.

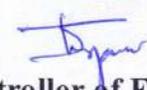

Dimensions & Basic concepts of thermodynamics: Basic and Derived units for common engineering variables and properties like mass, length, time, temperature, area, volume, velocity, acceleration, force, pressure, work, heat, energy, power system, surroundings, boundary, universe, control volume, Properties (intensive, extensive), process, path, cycle, working substance, cyclic process, reversible, irreversible process, Thermodynamic equilibrium, zeroth law of thermodynamics, temperature & its measurement, Gas laws-Boyle's, Charles, ideal gas equation, characteristic & universal gas constant.

Diploma in Mechanical Engineering (2021-2024)

UNIT -II

9 Hr.

First law & Second Law of Thermodynamic: First law of thermodynamics & Joules experiment first law applied to a process & cyclic process. Determination of heat transfer, work transfer and internal energy change for thermodynamic processes. Limitations of First law of thermodynamics, Thermal efficiency of heat engine, cop of refrigerator & heat pump. Kelvin Planck's & Clausius statements of second law of thermodynamics.

UNIT-III

8 Hr.

Pure substance: phase transformation at constant pressure, p-v diagram for water, and various states of steam Enthalpy changes during steam formation, properties of steam & properties diagrams. Process of steam, constant pressure, constant volume, reversible adiabatic, Isothermal, polytropic & throttling process.

UNIT-IV

8 Hr.

Vapor power cycle: Carnot cycle its limitation, Rankine cycle, their representation on P-V and T-S and H-S Planes, derivation of expression for thermal efficiency,
Air Standard cycles: Air Standard cycles- definition and standard efficiency of Carnot, Otto, Diesel and dual cycle.

UNIT -V

8 Hr.

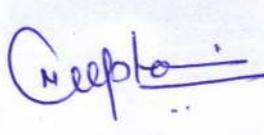

I.C. Engine-Introduction, classification I.C. Engine Components and their functions, working of two stroke and four- stroke cycle engines and their comparison. Indicator diagram, Calculation of IHP, BHP thermal efficiency, Mechanical efficiency and relative efficiency, Governing, Cooling and lubrication of I.C. Engines

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit.

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

(A) To gain knowledge of different types of stresses, strain and deformation induced in the mechanical components due to external loads. (B) To study the distribution of various stresses in the mechanical elements such as beams, shafts etc. (C) To study effect of various loading conditions of column and gain knowledge of theories of failure.

Course Outcomes (COs):

On completion of this course the students will be able to understand

1. Define and memorize mechanical properties of material & select appropriate material for a given working Conditions.
2. Explain simple stresses, bending stress, shear stress, torsion stress, principal stresses, thin and thick cylinder, shaft, springs, columns and theories of failures.
3. Calculate and design structural members subjected to tension, compression, torsion, bending, and combined stresses using the fundamental concepts of stress, strain and elastic behavior of materials.
4. Design of shaft and pressure vessels.
5. Justify bending equation and torsion equation and use it to solve the numerical.

Syllabus: -

UNIT-I

8 Hrs.

Introduction: Mechanical Properties; Define Stress and strain; tensile, compressive stresses and shear stresses; Stress-Strain Diagram; Poisson's Ratio, Modulus of elasticity, Modulus of rigidity and Bulk modulus; Factor of safety; Deformation due to self-weight; bars of varying sections; composite sections; principle of superposition and strain energy.

UNIT-II

7 Hrs.

Diploma in Mechanical Engineering (2021-2024)

Compound Stresses: principal stresses, normal and shear stress, Mohr's circle, Thermal Stress and its applications, Introduction of thin-walled cylindrical pressure vessel; Hoop's and longitudinal stress in thin-walled cylindrical pressure vessel.

UNIT-III

7 Hrs.

Bending: Define bending and their assumptions; Pure bending; bending equation; Section Modulus; deformation and stress occur due to bending; bending of composite sections; shear stresses in beam for different section.

UNIT-IV

7 Hrs.

Torsion: Define torsion and their assumptions; Torsion Equation; Polar Modulus; Torsion of circular shafts-solid and hollow; Strength of Shaft for varying sections and composite shaft; combined bending and torsion.

UNIT-V

8 Hrs.

Columns and Theories of Failure: Buckling load; Types of end conditions for column; Euler's column theory and its limitations; Define Theories of failures- Maximum principal stress theory, Maximum principal strain theory, maximum shear stress theory, maximum strain energy theory and maximum shear strain energy theory.

Reference Books:

4. *Mechanics of Materials—S. S. Rattan, TMH Pvt. Ltd. 2010.*
5. *Strength of Materials, Subramanyam, Oxford University Press, Edition, 2005.*

List of Practical's:

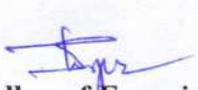

1. Perform Brinell and Rockwell Hardness tests to find BHN and RHN for given specification.
2. Perform Izod/ Charpy impact test.
3. Perform Fatigue test.
4. Perform Torsion test.
5. To find tensile strength of given specimen by tensile test on MS and CI using UTM.

Course Educational Objectives (CEOs):

(A) This course provides comprehensive knowledge of production drawing, assembly drawings and orthographic Sectional views. (B) This course provides comprehensive knowledge of computer applications in production drawing assembly drawing, solid modeling & graphics standards.

Course Outcomes (COs):

On completion of this course the students will be able to acquire knowledge of the applications of computers in design, parts creation, assembling and production drawing creation, mechanism, and manufacturing activity

1. Students will be able to understand all drawing conventions, symbols and concepts of machine drawing Creation.
2. Student would be able to convert functional specification of mechanical engineering parts and assembly requirements into manufacturing drawing in a manner consistent with standards.
3. Students will be able to interpret manufacturing and assembly drawings and acquire skill in preparing production drawings pertaining to various designs.

Syllabus

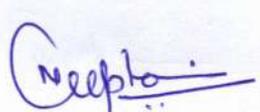

UNIT -I

6 Hrs.

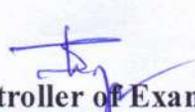

Dimensioning Tolerance, Machining and Welding Symbols: Types of dimensions; dimensioning terms and notations, screw threads taper with conventions; Application of tolerances (Use I.S. Code 696) Machining marks,

finish marks, machining (circularity and Angularity), (Ref IS 969); Representation of welded joints, welding symbols, Procedure of drawing fits, limits, size, tolerance, and clearance.

UNIT – II

7 Hrs.

Projection and multi view Representation: Orthographic projection; First and third angle projection; choice of views; conversion of pictorial views into orthographic view.

UNIT – III

7 Hrs.

Sectional Views: Full section, half section, partial or broken section, revolved section, and offset section; Sectioning conventions; section lines; Hatching procedure for different materials; Sectional views of assembled parts.

UNIT-IV

7 Hrs.

Assembly Drawing: Detailed drawing; assembly drawing; scale, and bill of material; Preparation of assembly drawing from detailed drawing; Exploded views; assembly drawing of Pedestal bearing, footstep bearing and journal bearing; cotter joint and knuckle joint.

UNIT -V

6 Hrs.

Riveted Joints: Types of rivet heads; Different types of riveted joints lap joint and butt joint; chain riveting and zigzag riveting.

Reference Books:

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

To paraphrases with (A) CAD related application with it and its need, (B) 2-D and 3-D modeling terms, draw editing commands and utility commands.

Course Outcomes (COs):

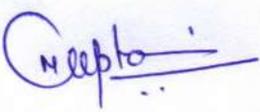

After completion of this course the student are expected to be able to demonstrate following knowledge skills and attitudes. The student will be able to

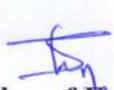

1. Student would be able to understand CAD, its application and limitation.
2. Student would be able to use 2-D drawing, editing commands and its applications.
3. Student would be able to solve assembly related problems.

List of Practical's:

1. Setting up of drawing environment by setting drawing limits, drawing units, naming the drawing, naming layers, setting line types for different layers using various type of lines in engineering drawing, saving the file with .dwg extension.
2. Layout drawing of a building using different layer and line colours indicating all Building details. Name the details using text commands, Make a title Block.
3. To draw Orthographic Projection Drawings (Front, Top and side) of Mechanical Parts - safety valve, knuckle joint, cotter joint & Plummer block etc.
4. Make an Isometric dimensioned drawing from orthographic drawings.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

***Teacher's Assessment** shall be based upon following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Objective

1. To create awareness towards various environmental problems.
2. To create awareness among students towards issues of sustainable development.
3. To expose students towards environment friendly practices of organizations.
4. To sensitize students to act responsibly towards environment.

Examination Scheme

The internal assessment of the students' performance will be done out of 40 Marks. The semester Examination will be worth 60 Marks. The question paper and semester exam will consist of two sections A and B. Section A will carry 36 Marks and consist of five questions, out of which student will be required to attempt any three questions. Section B will comprise of one or more cases / problems worth 24 marks.

Course Outcomes

1. The course will give students an overview of various environmental concerns and practical challenges in environmental management and sustainability.
2. Emphasis is given to make students practice environment friendly behavior in day-to-day activities.

COURSE CONTENT

Unit I: Introduction to Environment Pollution and Control

1. Pollution and its types (Air, Water, and Soil): Causes, Effects and Control measures
2. Municipal Solid Waste: Definition, Composition, Effects
3. Electronic Waste: Definition, Composition, Effects
4. Plastic Pollution: Causes, Effects and Control Measures

Unit II: Climate Change and Environmental Challenges

1. Global Warming and Green House Effect
2. Depletion of the Ozone Layer
3. Acid Rain
4. Nuclear Hazards

Unit III: Environmental Management and Sustainable Development

1. Environmental Management and Sustainable Development: An overview
2. Sustainable Development Goals (17 SDGs)
3. Significance of Sustainable Development
4. Environment Friendly Practices At Workplace and Home (Three Rs' of Waste Management, Water Conservation, Energy Conservation)

Unit IV: Environmental Acts

1. The Water (Prevention and Control of Pollution) Act, 1974: Objectives, Definition of Pollution under this act, Powers and Functions of Boards
2. The Air (Prevention and Control of Pollution) Act, 1981: Objectives, Definition of Pollution under this act, Powers and Functions of Boards
3. The Environment (Protection) Act, 1986: Objectives, Definition of important terms used in this Act, Details about the act.
4. Environmental Impact Assessment: Concept and Benefits

Unit V: Role of Individuals, Corporate and Society

1. Environmental Values
2. Positive and Adverse Impact of Technological Developments on Society and Environment
3. Role of an individual/ Corporate/ Society in environmental conservation
4. Case Studies: The Bhopal Gas Tragedy, New Delhi's Air Pollution, Arsenic Pollution in Ground Water (West Bengal), Narmada Valley Project, Cauvery Water Dispute, Fukushima Daiichi Disaster (Japan), Ozone Hole over Antarctica, Ganga Pollution, Deterioration of Taj Mahal, Uttarakhand flash floods
