Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objective s(CEOs):

The subject aims to provide the student with:

1. Provide students with a comprehensive understanding of advanced manufacturing techniques and their economic and technological impact on industry.
2. Familiarize students with the role of automation, including CNC machines, Flexible Manufacturing Systems (FMS),
3. Familiarize students with Industry 4.0, emphasizing their role in optimizing production efficiency and quality in modern production.
4. Introduction of Micro manufacturing and nano manufacturing

Course Outcomes (COs):

Students will be able to:

1. Analyze the economic and technological impact of advanced manufacturing technologies on modern industrial practices, including the role of automation techniques like CNC and FMS.
2. Evaluate and apply advanced metal forming techniques such as micro-forming to meet precision manufacturing requirements.
3. Demonstrate knowledge of composite materials and surface engineering techniques.
4. Develop expertise in nano- and micro-manufacturing techniques and
5. Demonstrate Industry 4.0 concepts such as smart factories and digital manufacturing to the design and production of high-precision components.

Syllabus

UNIT I

8 Hrs.

Manufacturing Techniques: Introduction and Importance of Manufacturing: Economic and technological impact on industry, types of production system, Automation in Manufacturing: Role of CNC machines, Flexible Manufacturing Systems (FMS), Lean Manufacturing and Six Sigma: Principles and their application in modern production. Introduction to Industry 4.0.

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

UNIT II

9 Hrs.

Metal Forming Techniques: Introduction to forming: Principle, applications, and materials used, different types of modern forming techniques such as Explosive forming, magnetic pulse forming etc. Introduction to rolling process and types of rolling mills, micro-forming and nano-forming: techniques such as micro-extrusion, micro-stamping (micro-punching), micro-deep drawing micro-bending.

UNIT III

8 Hrs.

Composite Materials Manufacturing: Classifications of materials, Introduction to Composites: Types (fiber-reinforced, particulate-reinforced, and hybrid etc.). forming of composites. Applications of Composites in Aerospace, Automotive, and Marine Industries.

UNIT IV

8 Hrs.

Surface Engineering: Surface Engineering: Definition, importance, and applications, Surface Hardening Techniques: Case hardening, nitriding, and carburizing, Fundamentals of friction, wear, and lubrication. Wear types: Adhesive, abrasive, erosive, corrosive.

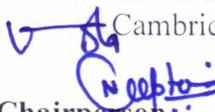

UNIT V

9 Hrs.

Nano-Manufacturing and Micro-Manufacturing: Introduction to Nano-Manufacturing: Fundamentals and importance, Techniques for Nano-Manufacturing: Lithography, chemical vapor deposition. Micro-Manufacturing: Micro-machining, micro-molding, Applications of micromanufacturing.

List of Practical's:

1. To study different types of production systems (Job, Batch, Mass, Continuous) through case analysis.
2. To study the construction, working and basic part programming of CNC lathe/milling machine.
3. To perform rolling operation and calculate percentage reduction in thickness.
4. To understand principles and applications of explosive forming process.
5. To fabricate a simple glass fiber reinforced plastic (GFRP) specimen.
6. To study compression molding or resin transfer molding process.
7. To perform case hardening on mild steel specimen and measure surface hardness.
8. To study carburizing processes and observe microstructure changes.
9. To understand steps involved in photolithography process.
10. To perform micro-drilling or micro-milling and measure dimensional accuracy.

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

- (A) To familiarize students with basic types of mechanisms, joints and degrees of freedom to perform position, velocity and acceleration analysis using graphical and analytical methods.
- (B) To provide students an understanding of different types of mechanisms and to teach the basics of synthesis of simple mechanisms and also teach student the kinematic analysis of cam-follower motion.
- (C) To provide basic concept gyroscope, which allows the calculation of orientation and rotation; designers have incorporated them into modern technology.

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes

1. Students will be able to define systematically design and develop mechanisms to perform a specified task and demonstrate an understanding of the concepts of various mechanisms and pairs.
2. Students will be able to do the velocity and acceleration analysis of simple mechanisms.
3. Students will be able to explain effectively present written, oral, and graphical solutions to design problems & develop ability to come up with innovative ideas and design a layout of cam for specified motion.
4. Students will be able demonstrate an understanding of principle of gears.
5. Students will be able to synthesis simple gyroscopic forces and couple, and gyroscopic effect in airplanes, ship and vehicle.

Syllabus: -

UNIT- I

9 Hrs.

Simple Mechanism: Introduction of theory of machines; definitions of statics, dynamics, kinematics, kinetics, kinematic pair, kinematic chain, mechanism, machine inversions, relation between number of links, number of joints and number of pairs; Four bar chain and its inversion; Slider crank chain and its inversions.

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

UNIT-II

8 Hrs.

Cams and Followers: Need, Classification, motion of follower; Displacement, velocity and acceleration diagrams uniform velocity, uniform acceleration, and retardation.

UNIT-III

9 Hrs.

Brakes and Dynamometers: Brakes-Need, types, braking force, braking torque; Band brakes; block brakes; Band and Block brakes; internally expanded brakes; Dynamometers-Need, Types, principles, Construction and working.

UNIT-IV

8 Hrs.

Power Transmission: Classification of power transmission devices, belt drive, chain drive, rope drive and gear drives; Flat and 'V' belt drives; ratio of tensions; Slip length of belt calculation for open and cross belt drive.

UNIT-V

9 Hrs.

Governors: Classification of governors, Watt governor, porter governor, proell governor and Hartnell governor-their construction and working; Sensitivity; stability; power and effort; hunting phenomenon and isochronous governor.

Course Educational Objectives (CEOs):

1. To understand the design methodology for machine elements.
2. To analyze the forces acting on a machine element,
3. Apply suitable design methodology.
4. To understand the various standards and methods of standardization.
5. To apply the concept of parametric design and validation by strength analysis

Course Outcomes (COs):

Students will:

1. Understand the design concepts of various machine elements.
2. Design for fatigue and endurance limit
3. Design the shafts and couplings.
4. Design the various types of springs.
5. Understand the concepts of bearing lubrication and design the journal bearings.

Syllabus

UNIT I

8 Hrs.

Introduction: Introduction to Design process, Design considerations, Design Procedure, engineering materials properties and processes of their selection, Bending and Torsional stress equations, Stress concentration, causes of stress concentration factor, reduction of stress concentration.

UNIT II

9 Hrs.

Design for fatigue strength and endurance limit: fatigue, cyclic loading, endurance limit, Design consideration for fatigue, stress concentration factor, loading factor, size factor, surface factor, Goodman and modified Goodman's diagram, Soderberg equation, Gerber parabola.

UNIT III

10 Hrs.

Design of Shafts: Various types of shafts; Stresses in Shafts; Design of shafts (solid and hollow) subjected to torque and bending moment.

keys and Coupling: Definition of term key, its various types, Design of keys, Forces acting on sunk keys, Shaft coupling and its various types.

UNIT IV

8 Hrs.

Design of Springs: Introduction and types of springs, Material for helical spring, terms used in compression springs, stresses in helical spring, Design of helical compression & tension spring, leaf spring, fatigue loading of springs, surge in springs.

UNIT V

9 Hrs.

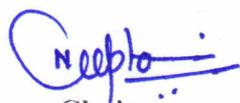

Journal Bearing: Types of lubrication, viscosity, hydrodynamic theory, design factors, temperature and viscosity considerations, Reynold's equation, stable and unstable operation, heat dissipation and thermal equilibrium, boundary lubrication, dimensionless numbers, Design of journal bearings, Rolling-element Bearings: Types of rolling contact bearing, bearing friction and power loss, bearing life.

Course Educational Objectives (CEOs):

This course will provide knowledge of (A) Fluid and its properties, (B) behavior of fluid under various conditions, (C) Water turbine and pumps, (D) Applications.

Course Outcomes (COs):

After the successful completion of this course students will be able to

1. Understand the fundamentals of fluid mechanics.
2. Understand basics of compressible flow.
3. Understand fundamentals of flow through pipes.
4. Understand statics, dynamics and various approaches to fluid mechanics.
5. Understand the working of hydraulic turbine and centrifugal pump.

Syllabus

UNIT-I

8 Hrs.

Introduction to Industrial Engineering

Industrial engineering concepts, Work Study, Method study, Motion economy and analysis, Work measurement

UNIT -II

8 Hr.

Production Planning and Control: Definition and importance, types of production -job, batch and mass, forecasting, routing, scheduling, dispatching and follow up. Break even analysis and Gantt chart Project.

UNIT – III

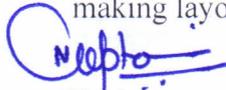

7 Hr.

Productivity Management: Concept of Productivity, Factors affecting Productivity, Total productivity model. Short term and Long term Productivity Planning Models. Productivity improvement Techniques.

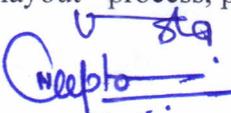

UNIT – IV

8 Hr.

Plant Location and Layout: Definition, factors affecting the site selection of plant Factor affecting plant layout Types of layout - process, product, combination and fixed position layout Techniques in making layout.

Course Educational Objectives (CEOs):

Students will be able to design, model, and assemble mechanical components while applying solid and surface modeling techniques to produce professional engineering drawings.

Course Outcomes (COs):

After completion of this course the student are expected to be able to demonstrate following knowledge skills and attitudes. The student will be able to

1. Students will be able to Design complex 2D and 3D models using basic and advanced CAD commands.
2. Students will be able to Create effective 2D drawings with layers, blocks, annotations, and layout setups.
3. Students will be able to Develop and modify complex surface models using advanced surface modeling techniques.
4. Students will be able to Assemble components, apply constraints, and conduct analysis for functional validation.

Unit I

Introduction: Introduction to CAD, Why CAD Software, Scope, objective, benefit, limitation & evaluation; Engineering Design process, Considerations, Product Design Cycle, Digital Prototyping, Product development today.

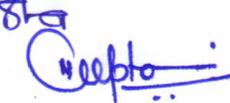

Unit II

Graphics Fundamentals: CAD Interface, coordinate system, Creating, Creating Additional Drawing Objects, Inquiry Commands, Modify and Manipulating Objects, Construction and Reference Geometry, Hatching Objects, Layers & Blocks, Text, Table & Dimensions, Printing, Plotting, Layouts and view ports.

Unit III

Solid Modeling: Introduction, Types of models, Construction of 3D Solid Primitives, create 3D Solids from Objects, Extrude, Revolve, Sweep, Loft, Combine or Slice 3D Objects, Move Rotate & Scale 3D Objects, Object Sectioning, Save and Publish Section Objects Wire Frame Models, Wire frame Entities.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;
***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

5. Create a 3D model using solid primitives such as cube, cylinder, and sphere.
6. Create a 3D object using the extrude, revolve, and loft commands from 2D sketches.
7. Section a 3D object using the slice command and modify its properties.
8. Create complex surfaces using tools like sweep, loft, and boundary blend.
9. Create a surface model, using mesh operations and Nurbs creation.
10. Assemble multiple components using constraints like mate, align, insert, and tangent.
11. Conduct interference and motion analysis on an assembly model to validate constraints.
12. Apply materials, textures, and light effects to an assembly and generate a rendered image.
