Choice Based Credit System (CBCS) in the light of NEP-2020

B. Tech (CSE/ IT) - All Programs

SEMESTER- III (2025-29)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTCS306M	DCC	Fundamentals of Data Structures	60	20	20	30	20	3	0	2	4

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. To understand efficient storage mechanisms of data for easy access.
2. To design and implementation of various basic and advanced data structures.
3. To introduce various techniques for representation of the data in the real world.
4. To develop applications using data structures.
5. To understand the concept of protection and management of data.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Get a good understanding of applications of Data Structures.
2. Develop applications using data structures.
3. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
4. Decide the appropriate data type and data structure for a given problem.
5. Select the best algorithm to solve a problem by considering various problem characteristics, such as the data size, the type of operations, etc.

SYLLABUS

UNIT I

10 HOURS

Introduction: Overview of Data structures, Types of data structures, Primitive and Non-Primitive data structures and Operations, Introduction to Algorithms & complexity notations. Characteristics of Array, One-Dimensional Array, Operation with Array, Two-Dimensional Arrays, Three or Multi-Dimensional Arrays, Sparse matrix, Drawbacks of linear arrays. Strings, Array of Structures, Pointer and one-dimensional Arrays, Pointers and Two-Dimensional Arrays, Pointers and Strings, Pointer and Structure.

UNIT II

9 HOURS

Linked List: Linked List as an ADT, Linked List Vs. Arrays, Dynamic Memory Allocation & De-allocation for a Linked List, Types of Linked List: Circular & Doubly Linked List. **List operations:** All possible insertions and deletion operations on all types of Linked list Reverse a Single Linked List; Divide a singly linked list into two equal halves, Application of Linked List.

BTCS306M	DCC	Fundamentals of Data Structures	60	20	20	30	20	3	0	2	4

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

UNIT III

8 HOURS

Stack: The Stack as an ADT, Stack operation, Array Representation of Stack, Link Representation of Stack, Application of stack – Recursion, Polish Notation. Types of Recursions, problem based on Recursion: Tower of Hanoi. **The Queue:** The Queue as an ADT, Queue operation, Array Representation of Queue, Linked Representation of Queue, Types of Queue: Circular Queue & Dequeue, Introduction of Priority Queue, Application of Queues.

UNIT IV

10 HOURS

Tree: Definitions and Concepts of Binary trees, Types of Binary Tree, Representation of Binary tree: Array & Linked List. General tree, forest, Expression Tree. Forest and general tree to binary tree conversion. Binary Search Tree Creation, Operations on Binary Search Trees: insertion, deletion & search an element, Traversals on Binary SEARCH TREE and algorithms. Height balanced Tree: AVL, B-Tree, 2-3 Tree, B+Tree: Creation, Insertion & Deletion. **Graph:** Definitions and Concepts Graph Representations: Adjacency MATRIX, Incidence matrix, Graph TRAVERSAL (DFS & BFS), Spanning Tree and Minimum Cost Spanning Tree: Prim's & Kruskal's Algorithm.

UNIT V

8 HOURS

Sorting: Sorting Concept and types of Sorting, Stable & Unstable sorting. Concept of Insertion Sort, Selection sort, Bubble sort, Quick Sort, Merge Sort, Heap & Heap Sort, Shell Sort & Radix sort. Algorithms and performance of Insertion, selection, bubble, Quick sort & Merge sort.

- G. Pai, *Data Structures*. New Delhi, India: Tata McGraw-Hill, 2015.

LIST OF PRACTICALS

- To develop a program to find an average of an array using AVG function.
- To implement a program that can insert, delete and edit an element in array.
- To implement an algorithm for insert and delete operations of circular queue and implement the same using array.
- Write a menu driven program to implement the push, pop and display option of the stack with the help of static memory allocation.
- Write a menu driven program to implement the push, pop and display option of the stack with the help of dynamic memory allocation.
- Write a menu driven program to implementing the various operations on a linear queue with the help of static memory allocation.
- Write a menu driven program to implementing the various operations on a linear queue with the help of dynamic memory allocation.
- Write a menu driven program to implement various operations on a linear linked list.
- Write a menu driven program to implement various operations on a circular linked list
- Write a program for implementation of Bubble sort
- Write a program for Insertion sort
- Write a program for Merge Sort
- Write a program to implement Heap sort
- Write a program to implement Quick sort
- Write a program to Construct a Binary Search Tree and perform deletion, inorder traversal on it
- Write a program to develop an algorithm for binary tree operations and implement the same.
- Write a program to design an algorithm for sequential search, implement and test it.
- Write a program to develop an algorithm for binary search and perform the same.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Learn the fundamentals of Operating Systems.
2. Study the mechanisms of Operating System to handle processes and threads and their communication.
3. Gain knowledge of process management concepts that includes architecture, Mutual exclusion algorithms, deadlock detection and recovery algorithms.
4. Learn the mechanisms involved in memory management in Operating System.
5. Understand the components and management aspects of disc scheduling

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Describe the structure of Operating System in detail.
2. Design and Implement Process management Techniques in Operating System.
3. Calculate CPU Scheduling criteria.
4. Understand The Memory Management of Operating System.
5. Elaborate Disc Scheduling.

SYLLABUS

UNIT I

10 HOURS

Introduction to Operating System: Introduction and Need of operating system, Layered Architecture/Logical Structure of Operating system, Type of OS (Multiprogramming, Timesharing, Real-Time, Networked, Distributed, Clustered, Handheld), Operating system as Resource Manager and Virtual Machine, System Calls/Monitor Calls, Firmware- BIOS, Boot Strap Loader. Threads- processes versus threads, threading, concepts, models, kernel & user level threads, thread usage, benefits.

UNIT II

9 HOURS

Process Management: Process Model, Creation, Termination, States & Transitions, Context Switching, Process Control Block, CPU and I/O bound, CPU scheduler- short, medium, long-term, dispatcher, Scheduling: - preemptive and non-preemptive, Static and Dynamic Priority. Criteria/Goals/Performance Metrics, scheduling algorithms- FCFS, SJFS, shortest remaining time, round robin, Priority scheduling, multilevel queue scheduling, multilevel feedback queue scheduling.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

UNIT III

8 HOURS

Inter process Communication: Introduction to Message Passing, Race Condition, Critical Section Problem, Peterson's Solution, Semaphore, Classical Problems of Synchronization Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem. **Deadlock-** System model, Resource types, Deadlock Problem, Deadlock Characterization, Methods for Deadlock Handling, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock Detection, Recovery from Deadlock.

UNIT IV

9 HOURS

Memory Management: concepts, functions, logical and physical address space, address binding, degree of multiprogramming, swapping, static & dynamic loading- creating a load module, loading, static & dynamic linking, memory allocation schemes- first fit, next fit, best fit, worst fit and quick fit.

Virtual Memory- concept, virtual address space, paging scheme, pure segmentation and segmentation with paging scheme hardware support and implementation details, memory fragmentation, demand paging, working set model, page fault frequency, thrashing, page replacement algorithms- optimal, FIFO, LRU, Belady's anomaly; TLB (translation look aside buffer).

UNIT V

9 HOURS

File Management: Concepts, Naming, Attributes, Operations, Types, Structure, File Organization & Access (Sequential, Direct, Index Sequential) Methods, Memory Mapped Files, Directory Structures One Level, Two Level, Hierarchical/Tree, Acyclic Graph, General Graph, File System Mounting, File Sharing, Path Name, Directory Operations, Overview Of File System in Linux & Windows.

Input/output Subsystems- Concepts, Functions/Goals, Input/ Output devices- Block and Character, Spooling, Disk Structure & Operation, Disk Attachment, Disk Storage Capacity, Disk Scheduling Algorithm- FCFS, SSTF, Scan Scheduling, C-Scan Schedule.

4. M. Singhal and N. G. Shivaratri, Advanced Concepts in Operating Systems. New Delhi, India: Tata McGraw-Hill Education, 2017.

LIST OF PRACTICALS

1. Implement and update the BIOS settings of your PC.
2. Suppose there are five printers connected to a system. Each printing process requires a different amount of time to complete. The CPU allocates a fixed time slice to each process. After the time slice expires, the next process enters the CPU. If a process is not completed within its time slice, it is re-entered into the queue based on First-Come, First-Served (FCFS) scheduling in a rotational manner. Apply scheduling to this scenario.
3. Implement Non-Preemptive Priority CPU Scheduling.
4. Implement Non-Preemptive Shortest Job First (SJF) CPU Scheduling.
5. Suppose there are five different resources connected to a system (e.g., three printers and two scanners), each requiring different times to complete their tasks. Identify which scheduling algorithm provides the best CPU performance.
6. Implement scheduling where the CPU executes the process that arrives first (FCFS Scheduling).
7. Implement Round-Robin CPU Scheduling.
8. Write a program to implement Semaphore.
9. Consider a situation where five faculty members are seated around a table with four ballpoint pens placed on it. At any time, only one pen can be picked up by one faculty member for writing. What happens if all attempt to pick up a pen simultaneously? Find the solution.
10. Consider a dentist's clinic with one dentist and one treatment chair, along with n waiting chairs for patients:
 - If no patient is present, the dentist sleeps in the chair.
 - When a patient arrives, they wake up the dentist.
 - If multiple patients arrive while the dentist is treating one, the remaining patients wait if chairs are available; otherwise, they leave if no chairs are free. Find the solution for this scenario.
11. Write a program to implement Memory Management Algorithms such as *First Fit*, *Best Fit*, and *Worst Fit*.
12. Demonstrate Virtual Memory Techniques such as *LRU* (Least Recently Used) and *FIFO* (First-In, First-Out).

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. To provide an insight into the concept of information in the context of communication theory and its significance in the design of communication receivers.
2. To explore in detail, the calculations of channel capacity to support error-free transmission and, commonly used source coding and channel coding algorithms.
3. To encourage and train to design coding schemes for data compression and error correction, and they will also get an overall perspective of how this impacts the design of an optimum communication receiver.
4. To give a detailed study about the cryptography and their algorithms.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Overview of Probability Theory, significance of “Information” with respect to Information Theory.
2. Derive equations for entropy, mutual information, and channel capacity for all kinds of channels.
3. Implement the various types of source coding algorithms and analyse their performance.
4. Explain various methods of generating and detecting different types of error correcting codes.
5. Design linear block codes and cyclic codes (encoding and decoding).
6. Implement and decode a sequence at the receiver using Trellis decoder and Viterbi decoder.
7. understand and implement the concept of cryptography and various Algorithms.

SYLLABUS

UNIT I

6 HOURS

Introduction of Information Theory: Introduction, Measure of information, Mark off statistical model for information source, Entropy, and information rate of mark off source. Mutual Information, Conditional and Joint Entropy.

UNIT II

6 HOURS

Source Coding: Encoding of the source output, Shannon’s encoding algorithm, Communication Channels, Discrete communication channels, Continuous channels. Fundamental Limits on Performance: Source coding theorem, Huffman coding, Discrete memory less Channels, Channel Capacity.

UNIT III

6 HOURS

Channel: Channel coding theorem, Differential entropy and mutual information for continuous ensembles, Channel capacity Theorem Introduction. Introduction to Error Control Coding: Types of errors, examples, Types of codes Linear Block Codes: Matrix description, Error detection and correction, Standard arrays and table look up for decoding.

UNIT IV

6 HOURS

Cyclic Codes: Binary Cycle Codes, Algebraic structures of cyclic codes, Encoding using an (n-k) bit shift register, Syndrome calculation. BCH codes. RS codes, Golay codes, shortened cyclic codes, Burst error correcting codes. Burst and Random Error correcting codes. Convolution Codes: Convolution Codes, Time domain approach. Transform domain approach.

UNIT V

Introduction to Cryptography: Symmetric Key and Asymmetric Key Cryptography, DES, IDEA, PGP, RSA.

TEXTBOOKS: 6 HOURS

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Improve the background for choosing appropriate programming languages for certain classes of programming problems.
2. Understand principles to program in an imperative (or procedural), an object-oriented, a functional, and a logical programming language.
3. Understand the significance of implementation of a programming language in a compiler or interpreter
4. Increase the ability to learn new programming languages
5. Increase the capacity to express programming concepts and choose among alternative ways to express things.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Gain insight and develop understanding of the underlying principles and concepts of programming languages.
2. Competent with analyzing programming language design issues related to data types, expressions and control structures.
3. Describe the concept of sub-programming with the help of Functions. Also develop understanding with the parameter passing techniques and concept of function overloading.
4. Analyze various memory management techniques as well as apply various concepts of object-oriented programming.
5. Develop understanding with the exception handling concepts and gain knowledge of logical and functional programming.

SYLLABUS

UNIT I

8 HOURS

Preliminary Concepts: Reasons for Studying, Concepts of Programming Languages, Programming Domains, Language Evaluation Criteria, Influences on Language Design, Language Categories, Programming Paradigms – Imperative, Object Oriented, Functional Programming, Logic Programming.

UNIT II

8 HOURS

Data Types: Introduction, Primitive, Character, User Defined, Record, Union, Pointer and Reference Types, Design and Implementation Uses Related to these Types. Names, Variable, Concept of Binding

Expressions and Statements: Arithmetic Relational and Boolean Expressions, Short Circuit Evaluation Mixed Mode Assignment, Assignment Statements, Control Structures

UNIT IV

8 HOURS

Subprograms and Blocks: Fundamentals of Sub-Programs, Scope and Lifetime of Variable, Static and Dynamic Scope, Design Issues of Subprograms and Operations, Local Referencing Environments, Parameter Passing Methods, Overloaded Sub-Programs, Generic Sub-Programs.

UNIT V

8 HOURS

Abstract Data Types: Abstractions and Encapsulation, Introductions to Data Abstraction, Static and Stack Based Storage Management. Heap Based Storage Management. Garbage Collection. Object Oriented Programming in Smalltalk, C++, Java, C#, Php, Perl.

TEXTBOOKS:

1. R. W. Sebesta, *Concepts of Programming Languages*, 12th ed. Harlow, U.K.: Pearson Education, 2023.

5. T. W. Pratt, M. V. Zelkowitz, and T. V. Gopal, *Programming Languages: Design and Implementation*, 4th ed. Upper Saddle River, NJ, USA: Pearson Education, 2000.

LIST OF PRACTICALS

1. Examine name and scope including static variables in C and call resolution in Java
2. Examine garbage and memory leak in C and develop a mechanism to avoid or detect memory leak
3. Examine assignment operation including assignment of arrays in Java, assignment of lists in Python, and assignment of structures in C
4. Examine goto statement including scope of goto in C, jump into or out of the block, and non-local goto
5. Examine callbacks including callbacks in C and interface and inner classes in Java

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTDSE323	DSE	Go Lang	60	20	20	30	20	2	0	2	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability:

1. To introduce the design philosophy of Go: Simplicity, Safety, and Concurrency.
2. To master Go's type system, focusing on composition over class-based inheritance.
3. To develop highly concurrent systems using Go routines and Channels.
4. To build production-grade web services and high-performance APIs.
5. To understand the integration of Go with modern DevOps and Cloud tools.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Apply Go syntax and memory management concepts to solve computational problems.
2. Design modular software using Structs, Methods, and Implicit Interfaces.
3. Implement concurrent algorithms using Go routines and synchronization primitives (Channels, Wait Groups).
4. Build and test RESTful web services using Go's standard library and middleware logic.
5. Evaluate and optimize Go code performance for cloud-native software development.

SYLLABUS

UNIT I

6 HOURS

The Go Environment & Foundations: History and Motivation; Installing Go; The go tool chain; Creating the first module; Compilation vs. Interpretation. Primitive Types, Variables, and Zero-values; Constants and iota; Scope rules. Control Structures: if, switch, and the versatile for loop; Logical operators and Bitwise operations.

UNIT II

6 HOURS

Data Structures & Functional Logic: Arrays vs. Slices: Under-the-hood mechanics of slice headers, dynamic growth, and append logic. Maps (Hash tables) and String manipulation; Pointers: Stack vs. Heap allocation and Garbage Collection basics. Functions: Multiple returns, Variadic parameters, Anonymous functions, and Closures.

UNIT III

6 HOURS

structs' & The Interface System: Struts': Initialization and Nesting; Methods: Value vs. Pointer receivers; The equivalent in Go. Interfaces: The "Implicit" implementation philosophy; Interface values and the Empty interface (interface {}). Composition: Embedding structs and interfaces to achieve reusability without class-based inheritance.

UNIT IV

6 HOURS

Mastering Concurrency: Go routines: The M: N scheduler; Lightweight vs. OS threads; sync. Wait Group for

task synchronization. Channels: Directional channels, Buffered vs. Buffered; The select statement for non-blocking I/O. Advanced Patterns: Worker Pools, Fan-in/Fan-out, Murexes (sync. Mutex), and Context cancellation for API timeouts.

UNIT V

6 HOURS

Web Services & Production Readiness (9 hours): Error Handling: The Go idiom (error interface, Defer, Panic, Recover); Writing idiomatic Go code. Web Development: net/http package; JSON Marshaling/ Unmarshaling; Middleware design and Routing. Tooling & Testing: Unit testing with go test; Benchmarking; Compilation and Cross-platform builds.

3. T. Tsoukalos, *Mastering Go: Create high-performance concurrent applications and micro services with Go*, 3rd ed. Birmingham, UK: Packt Publishing, 2021.

LIST OF PRACTICALS

1. Workspace setup and implementing a basic CLI tool for mathematical series generation.
2. Implement a "Student Record Search" using Slices and Binary Search logic.
3. Build a "Company Directory" using Maps with functions to add, delete, and list entries.
4. Implement a "Geometry Library" using Interfaces to calculate area/perimeter for different shapes.
5. Simulation of an "Order Processing System" using multiple Goroutines and Wait Groups.
6. Create a "Concurrent Web Scraper" that fetches multiple URLs simultaneously via Channels.
7. Build a basic REST API for a "Sajag" Cyber-Alert system where users can submit alerts via JSON.
8. Writing Unit Tests and Benchmarking performance for the API developed in Lab 7.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Get knowledge of basic software engineering methods and practices.
2. Define software requirements and requirement engineering.
3. Apply approaches for various designs and their principles.
4. Explore testing in various domains.
5. Development of significant teamwork and project-based experience.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Compare various software process models and identify where these models are applicable.
2. Define and analyze software project management, the framework and the dimensions of software project management.
3. Comprehend System modeling using UML.
4. Identify software testing strategies by using testing tools.
5. Analyze software risks and risk management strategies.

SYLLABUS

UNIT I

10 HOURS

Introduction to Software Engineering: The evolving role of software, changing nature of software, software myths.

A Generic view of process: Software engineering- a layered technology, a process framework, the capability maturity model integration (CMMI), process patterns, process assessment, personal and team process models.

Process models: The waterfall model, incremental process models, evolutionary process models, the unified process. Agile development-Agile Process, Extreme Programming

UNIT II

9 HOURS

Software Requirements: Functional and non-functional requirements, user requirements, system requirements, interface specification, the software requirements document.

Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management.

System models: Context models, behavioral models, data models, object models, structured methods.

UNIT III

10 HOURS

Design Engineering: Design Process- Design concepts: Abstraction, Architecture, patterns, Separation of Concerns, Modularity, Information Hiding, Functional Independence, Refinement, Aspects, Refactoring, Object Oriented Design Concepts, Design Classes- Design Model: Data, Architectural, Interface, Component, Deployment Level Design Elements

Creating an architectural design: software architecture, data design, architectural styles and patterns, architectural design, conceptual model of UML, basic structural modeling, Use Case Diagrams, Class Diagrams, Interaction Diagrams, State chart Diagrams, Activity Diagrams, Package Diagrams, Component Diagrams, Deployment Diagrams

UNIT IV

7 HOURS

Software Implementation: - Structured coding Techniques, Coding Styles, Standards and Guidelines, Documentation Guidelines-Modern Programming Language Features: Type Checking-User defined data types-Data Abstraction-Exception Handling, Concurrency Mechanism.

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, black-box and white-box testing, Object oriented software, Web Apps-validation testing, system testing, and the art of debugging.

UNIT V

9 HOURS

Metrics for Process and Products: Software measurement, metrics for software quality. Quality Management: Quality concepts, software quality assurance, software reviews, formal technical reviews, statistical software quality assurance, software reliability, ISO 9000 quality standards.

Risk management: Reactive Vs proactive risk strategies, software risks, risk identification, risk projection, risk refinement, RMMM, RMMM plan.

Maintenance: Software Maintenance, Software Supportability, Reengineering, Business Process Reengineering, Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering, Economics of Reengineering

COURSE OBJECTIVES:

The student will have ability to:

1. Understand the general overview of the concepts and fundamentals of computer networks.
2. Understand the various components required to build different networks.
3. Familiarize the students with the standard models for the layered approach to communication between machines in a network and the protocols of the various layers.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Understanding basic computer network technology.
2. Understand the functions of each layer in the OSI and TCP/IP reference model.
3. Obtain the skills of subnetting and routing mechanisms.
4. Familiarity with the essential protocols of computer networks, and how they can be applied in network design and implementation.

SYLLABUS

UNIT I

9 HOURS

Introduction: Importance of Computer Networks, Classifications & Types. Layered Architecture: Protocol hierarchy, Interfaces and Services, Connection Oriented & Connection less Services, ISO- OSI Reference Model, TCP/IP model overview, comparison of TCP/IP and ISO-OSI reference model.

UNIT II

9 HOURS

Data Link Layer & MAC Sublayer: Need, Services Provided, Design issues, Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel. Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, MAC Addressing, Binary Exponential Back-off (BEB) Algorithm, Distributed Random Access Schemes/Contention Schemes: for Data Services (ALOHA and Slotted- ALOHA), CSMA, CSMA/CA, CSMA/CD.

UNIT III

9 HOURS

Network Layer: Need, Services Provided, Design Issues, Routing Algorithms and types of Routing Algorithm, IPv4, IPv6, Classful and classless Addressing, Subnetting, Supernetting.

UNIT IV

10 HOURS

Transport Layer: Need, Design Issues, Multiplexing and Demultiplexing, transport layer services, UDP, UDP Header Format, Principles of reliable data transfer, TCP, Connection Management, TCP Flow Control, TCP

Congestion Control, TCP Header Format, TCP Timer Management, SCTP.

UNIT V

8 HOURS

Session layer: Overview, Authentication, Session layer protocols.

Presentation layer: Overview, Data conversion, Encryption and Decryption, Presentation layer protocols (LPP, Telnet, X.25 packet Assembler/Disassembler).

Application Layer: Domain name system, SNMP, Electronic Mail; the World WEB, HTTP, FTP.

TEXTBOOKS:

1. Andrew S Tanenbaum, *Computer Networks*, 6thEd., Pearson Education, 2016.
2. Behrouz A. Forouzan, *TCP/IP-Protocol suite*, 4th Ed., McGraw-Hill, 2010.

2. Comer, *Internet working with TCP/IP Volume one*, Addison-Wesley, 2015.
3. W. Richard Stevens, *TCP/IP Illustrated, Volume 1*, 2nd Ed., Addison-Wesley Professional Computing Series.

LIST OF PRACTICALS

1. Demonstrate Different Types of Network Equipment's.
2. Color coding standard of CAT 5, 6, 7 and crimping of cable in RJ-45.
3. LAN installations and Configurations.
4. Experiment with basic Network configuration commands.
5. Write a program for error detection and correction technique.
6. Write a program for framing.
7. Write a program for routing algorithm.
8. Socket Programming.
9. Study about different network simulators.
10. Establish and simulate peer to peer network using packet tracer.
11. Simulate LAN using hub and switch and discuss pros and cons of hub.
12. Router configuration using packet tracer.

COURSE OBJECTIVES:

The student will have ability to:

1. Understand the fundamental concepts of cloud computing, IBM Cloud platform, and cloud service models for modern application deployment.
2. Apply IBM Cloud tools, Cloud Foundry architecture, and DevOps practices to deploy, manage, and integrate cloud-based applications.
3. Develop workflow-based applications using Node-RED and cloud services for scalable and automated solutions.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Explain the concepts of cloud computing, service models, deployment models, and IBM Cloud fundamentals.
2. Demonstrate the use of IBM Cloud platform components, Cloud Foundry architecture, and cloud deployment tools.
3. Configure and integrate IBM Cloud services, storage, and APIs within cloud applications.

SYLLABUS

UNIT I

10 HOURS

Fundamentals of Cloud Computing: Traditional IT infrastructure and challenges, Future trends in IT. Introduction to Cloud Computing, Characteristics of Cloud Computing, Service Models: IaaS, PaaS, SaaS, Deployment Models: Public, Private, Hybrid, IBM Cloud overview, Benefits of Cloud Computing.

UNIT II

8 HOURS

IBM Cloud Platform and Architecture: IBM Cloud evolution and features, IBM Cloud UI walkthrough, Organizations, Spaces, Domains, Users, User Management and Quotas, Monitoring and Logging, Containers and Services, Introduction to Cloud Foundry, Cloud Foundry Architecture, Cloud Controller and Diego Brain, Application staging and execution, Cloud Foundry CLI tools.

UNIT III

9 HOURS

IBM Cloud Services and Application Integration: IBM Cloud Services Overview, Analytics Services, Watson Services, Storage Services, Auto-scaling concepts, DevOps support services, registering services in IBM Cloud, Adding, services to applications, Service instances and metadata, VCAP_SERVICES configuration.

UNIT IV

9 HOURS

IBM Cloud DevOps and Continuous Delivery: Introduction to IBM Cloud DevOps, Continuous Integration and

LIST OF PRACTICALS

1. Create and configure an IBM Cloud account and explore IBM Cloud dashboard features
2. Study and demonstrate different cloud service models (IaaS, PaaS, SaaS) using IBM Cloud
3. Deploy a sample application using IBM Cloud Foundry CLI
4. Create and manage Organizations, Spaces, and Users in IBM Cloud
5. Monitor application logs and resource usage in IBM Cloud
6. Create and configure IBM Cloud service instances for storage and analytics
7. Integrate IBM Watson services with a cloud application
8. Configure VCAP_SERVICES for cloud application deployment
9. Create a DevOps Toolchain and configure Continuous Delivery pipeline
10. Implement automated application deployment using IBM Cloud DevOps services
11. Install and configure Node-RED environment
