Choice Based Credit System (CBCS) in the light of NEP-2020

B. Tech (CSE/ IT) - All Programs

SEMESTER- III (2025-29)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTCS301N	DCC	Discrete Structures	60	20	20	0	0	3	0	0	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Provide the fundamentals of formal techniques for solving the problems in computational domain and algorithm development.
2. Apply appropriate mathematical and statistical concepts and operations to interpret data and to solve problems
3. Formulate and evaluate possible solutions to problems, and select and defend the chosen solutions
4. Construct graphs and charts, interpret them, and draw appropriate conclusions.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Apply set theory, relations, and functions to solve computational problems.
2. Analyse logical statements and proofs using propositional and predicate logic, truth tables, and inference rules to determine validity and correctness of arguments.
3. Evaluate and construct graph-theoretic and algebraic structures to model and solve real-world problems in computer science.

SYLLABUS

UNIT I

10 HOURS

Set Theory-

Definition of Sets, Venn Diagrams, complements, Cartesian products, power sets, counting principle, cardinality and countability (Countable and Uncountable sets), pigeonhole principle. Relation: Definition, types of relation, domain and range of a relation, pictorial representation of relation, properties of relation, partial ordering relation. Function: Definition and types of function, composition of functions, recursively defined functions.

UNIT II

9 HOURS

Propositional logic

Proposition logic, basic logic, logical connectives, truth tables, tautologies, contradiction, normal forms (conjunctive and disjunctive), modus ponens and modus tollens, validity, predicate logic, universal and existential quantification. Notion of proof: proof by implication, converse, inverse, contra positive, negation, and contradiction, proof by using truth table.

UNIT III

9 HOURS

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore

Shri Vaishnav Institute of Information Technology

Choice Based Credit System (CBCS) in the light of NEP-2020

B. Tech (CSE/ IT) - All Programs

SEMESTER- III (2025-29)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTCS301N	DCC	Discrete Structures	60	20	20	0	0	3	0	0	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Graph Theory

Terminology Graph Representation Graph isomorphism; Connectedness; Various graph properties; Euler & Hamiltonian graph; shortest paths algorithms. Trees: Terminology; Tree traversals; prefix codes; Spanning trees; Minimum spanning trees.

UNIT IV

9 HOURS

Algebraic Structure

Binary composition and its properties definition of algebraic structure; Groupoid, Semi group, Monoid Groups, Abelian Group, properties of groups, Permutation Groups, Sub Group, Cyclic Group, Rings and Fields (definition and standard results).

UNIT V

9 HOURS

Posets, Hasse Diagram and Lattices

Introduction, ordered set, well-ordered set, Hasse diagram of partially, Lattices, properties of Lattices, bounded and complemented lattices. Generating functions, Solution by method of generating functions. Recurrence Relation and Generating Function: Introduction to Recurrence Relation, Linear recurrence relations with constant coefficients, Homogeneous solutions, Particular solutions, Total solutions.

SEMESTER- III (2025-29)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTCS306M	DCC	Fundamentals of Data Structures	60	20	20	30	20	3	0	2	4

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. To understand efficient storage mechanisms of data for easy access.
2. To design and implementation of various basic and advanced data structures.
3. To introduce various techniques for representation of the data in the real world.
4. To develop applications using data structures.
5. To understand the concept of protection and management of data.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Get a good understanding of applications of Data Structures.
2. Develop applications using data structures.
3. Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
4. Decide the appropriate data type and data structure for a given problem.
5. Select the best algorithm to solve a problem by considering various problem characteristics, such as the data size, the type of operations, etc.

SYLLABUS

UNIT I

10 HOURS

Introduction: Overview of Data structures, Types of data structures, Primitive and Non-Primitive data structures and Operations, Introduction to Algorithms & complexity notations. Characteristics of Array, One-Dimensional Array, Operation with Array, Two-Dimensional Arrays, Three or Multi-Dimensional Arrays, Sparse matrix, Drawbacks of linear arrays. Strings, Array of Structures, Pointer and one-dimensional Arrays, Pointers and Two-Dimensional Arrays, Pointers and Strings, Pointer and Structure.

UNIT II

9 HOURS

Linked List: Linked List as an ADT, Linked List Vs. Arrays, Dynamic Memory Allocation & De-allocation for a Linked List, Types of Linked List: Circular & Doubly Linked List. **List operations:** All possible insertions and deletion operations on all types of Linked list Reverse a Single Linked List; Divide a singly linked list into two equal halves, Application of Linked List.

UNIT III

8 HOURS

Stack: The Stack as an ADT, Stack operation, Array Representation of Stack, Link Representation of Stack, Application of stack – Recursion, Polish Notation. Types of Recursions, problem based on Recursion: Tower of Hanoi. **The Queue:** The Queue as an ADT, Queue operation, Array Representation of Queue, Linked Representation of Queue, Types of Queue: Circular Queue & Dequeue, Introduction of Priority Queue, Application of Queues.

UNIT IV

10 HOURS

Tree: Definitions and Concepts of Binary trees, Types of Binary Tree, Representation of Binary tree: Array & Linked List. General tree, forest, Expression Tree. Forest and general tree to binary tree conversion. Binary Search Tree Creation, Operations on Binary Search Trees: insertion, deletion & search an element, Traversals on Binary SEARCH TREE and algorithms. Height balanced Tree: AVL, B-Tree, 2-3 Tree, B+Tree: Creation, Insertion & Deletion. **Graph:** Definitions and Concepts Graph Representations: Adjacency MATRIX, Incidence matrix, Graph TRAVERSAL (DFS & BFS), Spanning Tree and Minimum Cost Spanning Tree: Prim's & Kruskal's Algorithm.

UNIT V

8 HOURS

Sorting: Sorting Concept and types of Sorting, Stable & Unstable sorting. Concept of Insertion Sort, Selection sort, Bubble sort, Quick Sort, Merge Sort, Heap & Heap Sort, Shell Sort & Radix sort. Algorithms and performance of Insertion, selection, bubble, Quick sort & Merge sort.

LIST OF PRACTICALS

- To develop a program to find an average of an array using AVG function.
- To implement a program that can insert, delete and edit an element in array.
- To implement an algorithm for insert and delete operations of circular queue and implement the same using array.
- Write a menu driven program to implement the push, pop and display option of the stack with the help of static memory allocation.
- Write a menu driven program to implement the push, pop and display option of the stack with the help of dynamic memory allocation.
- Write a menu driven program to implementing the various operations on a linear queue with the help of static memory allocation.
- Write a menu driven program to implementing the various operations on a linear queue with the help of dynamic memory allocation.
- Write a menu driven program to implement various operations on a linear linked list.
- Write a menu driven program to implement various operations on a circular linked list
- Write a program for implementation of Bubble sort
- Write a program for Insertion sort
- Write a program for Merge Sort
- Write a program to implement Heap sort
- Write a program to implement Quick sort
- Write a program to Construct a Binary Search Tree and perform deletion, inorder traversal on it
- Write a program to develop an algorithm for binary tree operations and implement the same.
- Write a program to design an algorithm for sequential search, implement and test it.
- Write a program to develop an algorithm for binary search and perform the same.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Learn the fundamentals of Operating Systems.
2. Study the mechanisms of Operating System to handle processes and threads and their communication.
3. Gain knowledge of process management concepts that includes architecture, Mutual exclusion algorithms, deadlock detection and recovery algorithms.
4. Learn the mechanisms involved in memory management in Operating System.
5. Understand the components and management aspects of disc scheduling

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Describe the structure of Operating System in detail.
2. Design and Implement Process management Techniques in Operating System.
3. Calculate CPU Scheduling criteria.
4. Understand The Memory Management of Operating System.
5. Elaborate Disc Scheduling.

SYLLABUS

UNIT I

10 HOURS

Introduction to Operating System: Introduction and Need of operating system, Layered Architecture/Logical Structure of Operating system, Type of OS (Multiprogramming, Timesharing, Real-Time, Networked, Distributed, Clustered, Handheld), Operating system as Resource Manager and Virtual Machine, System Calls/Monitor Calls, Firmware- BIOS, Boot Strap Loader. Threads- processes versus threads, threading, concepts, models, kernel & user level threads, thread usage, benefits.

UNIT II

9 HOURS

Process Management: Process Model, Creation, Termination, States & Transitions, Context Switching, Process Control Block, CPU and I/O bound, CPU scheduler- short, medium, long-term, dispatcher, Scheduling: - preemptive and non-preemptive, Static and Dynamic Priority. Criteria/Goals/Performance Metrics, scheduling algorithms- FCFS, SJFS, shortest remaining time, round robin, Priority scheduling, multilevel queue scheduling, multilevel feedback queue scheduling.

UNIT III

8 HOURS

Inter process Communication: Introduction to Message Passing, Race Condition, Critical Section Problem, Peterson's Solution, Semaphore, Classical Problems of Synchronization Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem. **Deadlock-** System model, Resource types, Deadlock Problem, Deadlock Characterization, Methods for Deadlock Handling, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock Detection, Recovery from Deadlock.

UNIT IV

9 HOURS

Memory Management: concepts, functions, logical and physical address space, address binding, degree of multiprogramming, swapping, static & dynamic loading- creating a load module, loading, static & dynamic linking, memory allocation schemes- first fit, next fit, best fit, worst fit and quick fit.

Virtual Memory- concept, virtual address space, paging scheme, pure segmentation and segmentation with paging scheme hardware support and implementation details, memory fragmentation, demand paging, working set model, page fault frequency, thrashing, page replacement algorithms- optimal, FIFO, LRU, Belady's anomaly; TLB (translation look aside buffer).

UNIT V

9 HOURS

File Management: Concepts, Naming, Attributes, Operations, Types, Structure, File Organization & Access (Sequential, Direct, Index Sequential) Methods, Memory Mapped Files, Directory Structures One Level, Two Level, Hierarchical/Tree, Acyclic Graph, General Graph, File System Mounting, File Sharing, Path Name, Directory Operations, Overview Of File System in Linux & Windows.

Input/output Subsystems- Concepts, Functions/Goals, Input/ Output devices- Block and Character, Spooling, Disk Structure & Operation, Disk Attachment, Disk Storage Capacity, Disk Scheduling Algorithm- FCFS, SSTF, Scan Scheduling, C-Scan Schedule.

4. M. Singhal and N. G. Shivaratri, Advanced Concepts in Operating Systems. New Delhi, India: Tata McGraw-Hill Education, 2017.

LIST OF PRACTICALS

1. Implement and update the BIOS settings of your PC.
2. Suppose there are five printers connected to a system. Each printing process requires a different amount of time to complete. The CPU allocates a fixed time slice to each process. After the time slice expires, the next process enters the CPU. If a process is not completed within its time slice, it is re-entered into the queue based on First-Come, First-Served (FCFS) scheduling in a rotational manner. Apply scheduling to this scenario.
3. Implement Non-Preemptive Priority CPU Scheduling.
4. Implement Non-Preemptive Shortest Job First (SJF) CPU Scheduling.
5. Suppose there are five different resources connected to a system (e.g., three printers and two scanners), each requiring different times to complete their tasks. Identify which scheduling algorithm provides the best CPU performance.
6. Implement scheduling where the CPU executes the process that arrives first (FCFS Scheduling).
7. Implement Round-Robin CPU Scheduling.
8. Write a program to implement Semaphore.
9. Consider a situation where five faculty members are seated around a table with four ballpoint pens placed on it. At any time, only one pen can be picked up by one faculty member for writing. What happens if all attempt to pick up a pen simultaneously? Find the solution.
10. Consider a dentist's clinic with one dentist and one treatment chair, along with n waiting chairs for patients:
 - If no patient is present, the dentist sleeps in the chair.
 - When a patient arrives, they wake up the dentist.
 - If multiple patients arrive while the dentist is treating one, the remaining patients wait if chairs are available; otherwise, they leave if no chairs are free. Find the solution for this scenario.
11. Write a program to implement Memory Management Algorithms such as *First Fit*, *Best Fit*, and *Worst Fit*.
12. Demonstrate Virtual Memory Techniques such as *LRU* (Least Recently Used) and *FIFO* (First-In, First-Out).

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. To build a solid foundation in the core "Three Pillars" of the web: HTML, CSS, and JavaScript.
2. To understand responsive design principles for mobile-first development.
3. To introduce modern "Utility-First" styling to speed up development.
4. To learn how to make websites interactive and connect them to real-world data.
5. To gain practical experience in deploying a live website to the cloud.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Create structured, accessible web pages using Semantic HTML5.
2. Design responsive, professional layouts using Flex box and Tailwind CSS.
3. Write JavaScript logic to handle user events and manipulate the page dynamically.
4. Fetch and display data from external APIs to create "live" applications.
5. Manage project versions with Git and deploy a functional site to a hosting platform.

SYLLABUS

UNIT I

6 HOURS

The Building Blocks: Web Basics: How the internet works (Client vs. Server) and setting up VS Code. HTML5: Semantic tags (header, section, footer), forms, and accessibility. Deployment 101: Moving from local folder to a live URL using Git Hub and Netlify/Vercel.

UNIT II

6 HOURS

Modern Styling: CSS Foundations: The Box Model, Positioning, and Typography, Layouts: Mastering Flex box, Tailwind CSS: Introduction to utility-first styling—styling a page without writing a single CSS file.

UNIT III

6 HOURS

Interactivity with JavaScript JS Basics: Variables, simple Functions, and Arrays. DOM Power: Selecting elements and changing text/colors when a user clicks a button. Events: Handling clicks, form submissions, and keyboard inputs.

LIST OF PRACTICALS

1. Personal Resume: Create a multi-section HTML page about yourself.
2. Landing Page: Style a professional-looking "Product Landing Page" using Tailwind CSS.
3. Interactive Menu: Build a mobile navigation menu that opens and closes with JavaScript.
4. Dark Mode Toggle: Use JS to switch between light and dark themes on a page.
5. Weather App: Fetch live weather data for Indore using a public API and display it.
6. To-Do List: Build a simple task manager that saves your list even if you refresh the page.
7. Contact Form: Create a validated form that "submits" data to the console.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Get knowledge of basic software engineering methods and practices.
2. Define software requirements and requirement engineering.
3. Apply approaches for various designs and their principles.
4. Explore testing in various domains.
5. Development of significant teamwork and project-based experience.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Compare various software process models and identify where these models are applicable.
2. Define and analyze software project management, the framework and the dimensions of software project management.
3. Comprehend System modeling using UML.
4. Identify software testing strategies by using testing tools.
5. Analyze software risks and risk management strategies.

SYLLABUS

UNIT I

10 HOURS

Introduction to Software Engineering: The evolving role of software, changing nature of software, software myths.

A Generic view of process: Software engineering- a layered technology, a process framework, the capability maturity model integration (CMMI), process patterns, process assessment, personal and team process models.

Process models: The waterfall model, incremental process models, evolutionary process models, the unified process. Agile development-Agile Process, Extreme Programming

UNIT II

9 HOURS

Software Requirements: Functional and non-functional requirements, user requirements, system requirements, interface specification, the software requirements document.

Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

System models: Context models, behavioral models, data models, object models, structured methods.

UNIT III

10 HOURS

Design Engineering: Design Process- Design concepts: Abstraction, Architecture, patterns, Separation of Concerns, Modularity, Information Hiding, Functional Independence, Refinement, Aspects, Refactoring, Object Oriented Design Concepts, Design Classes- Design Model: Data, Architectural, Interface, Component, Deployment Level Design Elements

Creating an architectural design: software architecture, data design, architectural styles and patterns, architectural design, conceptual model of UML, basic structural modeling, Use Case Diagrams, Class Diagrams, Interaction Diagrams, State chart Diagrams, Activity Diagrams, Package Diagrams, Component Diagrams, Deployment Diagrams

UNIT IV

7 HOURS

Software Implementation: - Structured coding Techniques, Coding Styles, Standards and Guidelines, Documentation Guidelines-Modern Programming Language Features: Type Checking-User defined data types-Data Abstraction-Exception Handling, Concurrency Mechanism.

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, black-box and white-box testing, Object oriented software, Web Apps-validation testing, system testing, and the art of debugging.

UNIT V

9 HOURS

Metrics for Process and Products: Software measurement, metrics for software quality. Quality Management: Quality concepts, software quality assurance, software reviews, formal technical reviews, statistical software quality assurance, software reliability, ISO 9000 quality standards.

Risk management: Reactive Vs proactive risk strategies, software risks, risk identification, risk projection, risk refinement, RMMM, RMMM plan.

Maintenance: Software Maintenance, Software Supportability, Reengineering, Business Process Reengineering, Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering, Economics of Reengineering

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability:

1. Analyse fundamental Python programming structures, data types, and optimization techniques to construct computationally efficient code.
2. Formulate algorithmic solutions using dynamic programming, sliding windows, and modular syntax to solve complex problems on competitive programming platforms.
3. Apply vectorized data manipulation and statistical visualization principles using NumPy, Pandas, and Matplotlib to preprocess real-world datasets for downstream AI/ML workflows.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Implement Python core constructs, exception handling, and functional paradigms to build clean, error-resistant scripts.
2. Synthesize high-performance vectorized computation matrices and relational multi-index data frames for exploratory data analysis.
3. Construct production-grade statistical plots and clean, pre-processed data frames formatted directly for machine learning pipelines.

SYLLABUS

UNIT I

6 HOURS

Python Basics & Control Structures: Environment & Setup: Installing Python and VS Code; running scripts via the terminal; using pip to install packages. **Variables & Core Data Types:** Basic tokens, keywords, and identifiers; working with Integers, Floats, Strings, and Booleans; explicit Type Casting. **Operators & Input/Output:** Arithmetic, Assignment, Comparison, and Logical operators; reading user input with input(); formatting output using f-strings. **Conditional Statements:** Single and multi-way branching layouts using if, elif, and else blocks; nested conditions. **Looping Mechanisms:** Fixed iterations using for loops and the range() generator; conditional tracking using while loops; loop break parameters using break and continue.

UNIT II

6 HOURS

Modular Programming, Arrays & Hashing: Functions & Scope: Defining functions with def; executing the return statement; distinguishing between Local and Global variable scope. **Function Parameters:** Passing positional arguments, default keyword parameters, and handling variable-length inputs using *args and kwargs.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Linear Data Configurations: Python Lists and Tuples; indexing, slicing syntax [start : stop : step], and list manipulation methods (append, insert, pop, remove). **Dictionaries & Sets:** Creating key-value pairs in Dictionaries; basic dictionary tracking methods (keys(), values(), items()); Set creation and unique element mathematical operations.

UNIT III

6 HOURS

Object-Oriented Programming: Transitioning from procedural code to Object-Oriented Programming; defining a class and instantiating an object. **Attributes & Methods:** Understanding instance variables; creating class methods; utilizing the instance reference parameter (self). **Object Lifecycle:** Implementing the constructor framework using the __init__() method to initialize object state parameters. **Core OOP Pillars:** Implementing basic Single Inheritance to reuse code; understanding Encapsulation via public and private attribute prefixes. **Robust Programming:** Anticipating runtime crashes; implementing structured code protection using try, except, and finally blocks; catching standard errors (ValueError, IndexError, KeyError).

UNIT IV

6 HOURS

NumPy: Array Memory Allocation Hierarchy: N-Dimensional array (ndarray) layout, contiguous block allocations, homogeneous data storage bounds vs standard Python lists, managing data types (dtype). **Vectorization & Matrix Operations:** Eliminating raw loops via universal functions (ufuncs), broadcasting rules across arrays of mismatched shapes, logical indexing masks, element filtering, sorting array axes. **Mathematical Dimension Manipulations:** Axis math definitions (axis=0 row vectors vs axis=1 column vectors), array reshape metrics, flattening operations, matrix splitting and stacking procedures (hstack, vstack). **Data Synthesis:** Generating pseudo-random numbers (np.random), managing execution continuity with seeds, generating linear and step distribution scales (linspace, arange).

UNIT V

6 HOURS

Data Structural Analysis & Visualization: Pandas Architecture: Series and DataFrame data layouts, handling structural metadata labels, alignment mechanics during mathematical execution. **Data Ingestion & Cleaning:** Parsing tabular file inputs (pd.read_csv, pd.read_excel), locating structural missing entities (isna, isnull), managing missing rows/columns via drops (dropna) and imputations (fillna), removing duplicate indexes. **Transformation & Aggregation Engines:** Slicing indexes via positional labels (loc, iloc), running query filtering criteria, applying mapping alterations across axis elements, the GroupBy lifecycle split-apply-combine paradigm, joining relational data schemas (merge, concat). **Matplotlib Visual Analytics:** Figure vs Axes execution frames, styling line graphs,

LIST OF PRACTICALS

1. Write a program to calculate employee net salary based on basic pay, variable tax rates, and allowance conditions.
2. Build a custom user authentication lookup utility using interactive while-loops, input checks, and break parameters.
3. Write a function that accepts variable-length numerical scores (*args) and calculates the optimized running average.

- Implement a string formatting utility that takes a raw paragraph, filters out punctuation, and returns a unique word-frequency dictionary.
- Create a class BankAccount with attributes for account number and balance, including methods for deposit() and withdraw().
- Write a program that implements a class hierarchy where a subclass Manager inherits properties from a base class Employee.
- Implement a file-parsing utility protected by try-except blocks to open a text file and trap potential file-not-found exceptions gracefully.
- Create an array of 20 random floating-point configurations using NumPy and replace all elements greater than a threshold with a default boundary value.
- Write a Pandas data cleaning script that inputs a dirty CSV dataset, drops rows with critical missing items, and groups records by a category index.
- Construct a dual-subplot visualization using Matplotlib that tracks and compares line plots of monthly business costs versus revenue scales side-by-side.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Improve the background for choosing appropriate programming languages for certain classes of programming problems.
2. Understand principles to program in an imperative (or procedural), an object-oriented, a functional, and a logical programming language.
3. Understand the significance of implementation of a programming language in a compiler or interpreter
4. Increase the ability to learn new programming languages
5. Increase the capacity to express programming concepts and choose among alternative ways to express things.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Gain insight and develop understanding of the underlying principles and concepts of programming languages.
2. Competent with analyzing programming language design issues related to data types, expressions and control structures.
3. Describe the concept of sub-programming with the help of Functions. Also develop understanding with the parameter passing techniques and concept of function overloading.
4. Analyze various memory management techniques as well as apply various concepts of object-oriented programming.
5. Develop understanding with the exception handling concepts and gain knowledge of logical and functional programming.

SYLLABUS

UNIT I

8 HOURS

Preliminary Concepts: Reasons for Studying, Concepts of Programming Languages, Programming Domains, Language Evaluation Criteria, Influences on Language Design, Language Categories, Programming Paradigms – Imperative, Object Oriented, Functional Programming, Logic Programming.

UNIT II

8 HOURS

Data Types: Introduction, Primitive, Character, User Defined, Record, Union, Pointer and Reference Types, Design and Implementation Uses Related to these Types. Names, Variable, Concept of Binding

UNIT III

B. Tech (CSE/IT) – All Programs

SEMESTER III (2025-2020)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTDSE323	DSE	Go Lang	60	20	20	30	20	2	0	2	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability:

1. To introduce the design philosophy of Go: Simplicity, Safety, and Concurrency.
2. To master Go's type system, focusing on composition over class-based inheritance.
3. To develop highly concurrent systems using Go routines and Channels.
4. To build production-grade web services and high-performance APIs.
5. To understand the integration of Go with modern DevOps and Cloud tools.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Apply Go syntax and memory management concepts to solve computational problems.
2. Design modular software using Structs, Methods, and Implicit Interfaces.
3. Implement concurrent algorithms using Go routines and synchronization primitives (Channels, Wait Groups).
4. Build and test RESTful web services using Go's standard library and middleware logic.
5. Evaluate and optimize Go code performance for cloud-native software development.

SYLLABUS

UNIT I

6 HOURS

The Go Environment & Foundations: History and Motivation; Installing Go; The go tool chain; Creating the first module; Compilation vs. Interpretation. Primitive Types, Variables, and Zero-values; Constants and iota; Scope rules. Control Structures: if, switch, and the versatile for loop; Logical operators and Bitwise operations.

UNIT II

6 HOURS

Data Structures & Functional Logic: Arrays vs. Slices: Under-the-hood mechanics of slice headers, dynamic growth, and append logic. Maps (Hash tables) and String manipulation; Pointers: Stack vs. Heap allocation and Garbage Collection basics. Functions: Multiple returns, Variadic parameters, Anonymous functions, and Closures.

UNIT III

6 HOURS

structs' & The Interface System: Struts': Initialization and Nesting; Methods: Value vs. Pointer receivers; The equivalent in Go. Interfaces: The "Implicit" implementation philosophy; Interface values and the Empty interface (interface {}). Composition: Embedding structs and interfaces to achieve reusability without class-based inheritance.

UNIT IV

6 HOURS

Mastering Concurrency: Go routines: The M: N scheduler; Lightweight vs. OS threads; sync. Wait Group for

task synchronization. Channels: Directional channels, Buffered vs. Buffered; The select statement for non-blocking I/O. Advanced Patterns: Worker Pools, Fan-in/Fan-out, Murexes (sync. Mutex), and Context cancellation for API timeouts.

UNIT V

6 HOURS

Web Services & Production Readiness (9 hours): Error Handling: The Go idiom (error interface, Defer, Panic, Recover); Writing idiomatic Go code. Web Development: net/http package; JSON Marshaling/ Unmarshaling; Middleware design and Routing. Tooling & Testing: Unit testing with go test; Benchmarking; Compilation and Cross-platform builds.

TEXTBOOKS:

1. A. A. A. Donovan and B. W. Kernighan, *The Go Programming Language*. Boston, MA, USA: Addison-Wesley, 2015.
2. W. Kennedy, B. Ketelsen, and E. St. Martin, *Go in Action*. Shelter Island, NY, USA: Manning Publications, 2016.

REFERENCE:

1. K. Bodner, *Learning Go: An Idiomatic Approach to Real-World Go Programming*. Sebastopol, CA, USA: O'Reilly Media, 2021.
2. M. Ryer, *Go Programming Blueprints: Build real-world, high-performance, and robust Go applications*, 2nd ed. Birmingham, UK: Packt Publishing, 2016.
3. T. Tsoukalos, *Mastering Go: Create high-performance concurrent applications and micro services with Go*, 3rd ed. Birmingham, UK: Packt Publishing, 2021.

LIST OF PRACTICALS

1. Workspace setup and implementing a basic CLI tool for mathematical series generation.
2. Implement a "Student Record Search" using Slices and Binary Search logic.
3. Build a "Company Directory" using Maps with functions to add, delete, and list entries.
4. Implement a "Geometry Library" using Interfaces to calculate area/perimeter for different shapes.
5. Simulation of an "Order Processing System" using multiple Goroutines and Wait Groups.
6. Create a "Concurrent Web Scraper" that fetches multiple URLs simultaneously via Channels.
7. Build a basic REST API for a "Sajag" Cyber-Alert system where users can submit alerts via JSON.
8. Writing Unit Tests and Benchmarking performance for the API developed in Lab 7.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Understand the general overview of the concepts and fundamentals of computer networks.
2. Understand the various components required to build different networks.
3. Familiarize the students with the standard models for the layered approach to communication between machines in a network and the protocols of the various layers.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Understanding basic computer network technology.
2. Understand the functions of each layer in the OSI and TCP/IP reference model.
3. Obtain the skills of subnetting and routing mechanisms.
4. Familiarity with the essential protocols of computer networks, and how they can be applied in network design and implementation.

SYLLABUS

UNIT I

9 HOURS

Introduction: Importance of Computer Networks, Classifications & Types. Layered Architecture: Protocol hierarchy, Interfaces and Services, Connection Oriented & Connection less Services, ISO- OSI Reference Model, TCP/IP model overview, comparison of TCP/IP and ISO-OSI reference model.

UNIT II

9 HOURS

Data Link Layer & MAC Sublayer: Need, Services Provided, Design issues, Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel. Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, MAC Addressing, Binary Exponential Back-off (BEB) Algorithm, Distributed Random Access Schemes/Contention Schemes: for Data Services (ALOHA and Slotted- ALOHA), CSMA, CSMA/CA, CSMA/CD.

UNIT III

9 HOURS

Network Layer: Need, Services Provided, Design Issues, Routing Algorithms and types of Routing Algorithm, IPv4, IPv6, Classful and classless Addressing, Subnetting, Supernetting.

UNIT IV

10 HOURS

Transport Layer: Need, Design Issues, Multiplexing and Demultiplexing, transport layer services, UDP, UDP Header Format, Principles of reliable data transfer, TCP, Connection Management, TCP Flow Control, TCP

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Congestion Control, TCP Header Format, TCP Timer Management, SCTP.

UNIT V

8 HOURS

Session layer: Overview, Authentication, Session layer protocols.

Presentation layer: Overview, Data conversion, Encryption and Decryption, Presentation layer protocols (LPP, Telnet, X.25 packet Assembler/Disassembler).

Application Layer: Domain name system, SNMP, Electronic Mail; the World WEB, HTTP, FTP.

TEXTBOOKS:

1. Andrew S Tanenbaum, *Computer Networks*, 6thEd., Pearson Education, 2016.
2. Behrouz A. Forouzan, *TCP/IP-Protocol suite*, 4th Ed., McGraw-Hill, 2010.

REFERENCE:

1. William Stallings, *Data and Computer Communication*, 10th Ed., Pearson, 2014.
2. Comer, *Internet working with TCP/IP Volume one*, Addison-Wesley, 2015.
3. W. Richard Stevens, *TCP/IP Illustrated, Volume 1*, 2nd Ed., Addison-Wesley Professional Computing Series.

LIST OF PRACTICALS

1. Demonstrate Different Types of Network Equipment's.
2. Color coding standard of CAT 5, 6, 7 and crimping of cable in RJ-45.
3. LAN installations and Configurations.
4. Experiment with basic Network configuration commands.
5. Write a program for error detection and correction technique.
6. Write a program for framing.
7. Write a program for routing algorithm.
8. Socket Programming.
9. Study about different network simulators.
10. Establish and simulate peer to peer network using packet tracer.
11. Simulate LAN using hub and switch and discuss pros and cons of hub.
12. Router configuration using packet tracer.
