COURSE CO	CATEGOR	COURSE NAME	END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*	L	Т	P	CREDITS
BTCS301N	DCC	Discrete Structures	60	20	20	0	0	3	0	0	3

COL	URSE OBJECTIVES:
The	student will have ability to:
1.	Provide the fundamentals of formal techniques for solve the problems in computational domain and
	algorithm development.
2.	Apply appropriate mathematical and statistical concepts and operations to interpret data and to solve
	problems.
3.	Formulate and evaluate possible solutions to problems, and select and defend the chosen solutions.
4.	Construct graphs and charts, interpret them, and draw appropriate conclusions.
COI	URSE OUTCOMES:
Upor	n completion of the subject, students will be able to:
1.	Understand the notion of mathematical thinking, mathematical proofs, and algorithmic thinking, and be able
	to apply them in problem solving.
2.	Define sets and perform operations and algebra on sets.
3.	Demonstrate an understanding of relations and functions and be able to determine their properties.
4.	Analyze logical propositions via truth tables.
5.	Write an argument using logical notation and determine if the argument is or is not valid.
6.	Understand some basic properties of graphs and related discrete structures and be able to relate these to
	practical examples.
7.	Model problems in Computer Science using graphs and trees.
8.	Be able to use effectively algebraic techniques to analyze basic discrete structures and algorithms.
9.	Draw hasse diagram and identify lattice.
10.	Understand generating functions and recurrence relation.
SYL	LABUS
TINIT	TI 10 HOURS

UNIT I 10 HOURS

Set Theory: Definition of Sets, Venn Diagrams, complements, Cartesian products, power sets, counting principle, cardinality and countability (Countable and Uncountable sets), pigeonhole principle. Relation: Definition, types of relation, domain and range of a relation, pictorial representation of relation, properties of relation, partial ordering relation. Function: Definition and types of function, composition of functions, recursively defined functions.

UNIT II 9 HOURS

Propositional logic: Proposition logic, basic logic, logical connectives, truth tables, tautologies, contradiction,

normal forms (conjunctive and disjunctive), modus ponens and modus tollens, validity, predicate logic, universal and existential quantification. Notion of proof: proof by implication, converse, inverse, contrapositive, negation, and contradiction, proof by using truth table.

UNIT III 9 HOURS

Graph Theory: Terminology Graph Representation Graph isomorphism; Connectedness; Various graph properties; Euler & Hamiltonian graph; shortest paths algorithms. Trees: Terminology; Tree traversals; prefix codes; Spanning trees; Minimum spanning trees.

UNIT IV 8 HOURS

Algebraic Structure: Binary composition and its properties definition of algebraic structure; Groupoid, Semi group, Monoid Groups, Abelian Group, properties of groups, Permutation Groups, Sub Group, Cyclic Group, Rings and Fields (definition and standard results).

UNIT V 9 HOURS

Posets, Hasse Diagram and Lattices: Introduction, ordered set, well ordered set, Hasse diagram of partially, Lattices, properties of Lattices, bounded and complemented lattices. Generating functions, Solution by method of generating functions. Recurrence Relation and Generating Function: Introduction to Recurrence Relation, Linear recurrence relations with constant coefficients, Homogeneous solutions, Particular solutions, Total solutions.

COU	URSE OBJECTIVES:
The s	tudent will have ability to:
1.	To understand efficient storage mechanisms of data for an easy access.
2.	To design and implementation of various basic and advanced data structures.
3.	To introduce various techniques for representation of the data in the real world.
4.	To develop application using data structures.
5.	To understand the concept of protection and management of data.
COU	URSE OUTCOMES:
Upon	completion of the subject, students will be able to:
1.	Get a good understanding of applications of Data Structures.
2.	Develop application using data structures.
3.	Handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
4.	Decide the appropriate data type and data structure for a given problem.
5.	Select the best algorithm to solve a problem by considering various problem characteristics, such as the data
	size, the type of operations, etc.
CITIT :	TADTIC

SYLLABUS

UNIT I 10 HOURS

Introduction: Overview of Data structures, Types of data structures, Primitive and Non Primitive data structures and Operations, Introduction to Algorithms & complexity notations. Characteristic of Array, One Dimensional Array, Operation with Array, Two Dimensional Arrays, Three or Multi-Dimensional Arrays, Sparse matrix, Drawbacks of linear arrays. Strings, Array of Structures, Pointer and one dimensional Arrays, Pointers and Two Dimensional Arrays, Pointers and Strings, Pointer and Structure.

UNIT II 9 HOURS

Linked List: Linked List as an ADT, Linked List Vs. Arrays, Dynamic Memory Allocation & De-allocation for a Linked List, Types of Linked List: Circular & Doubly Linked List.

Linked List operations: All possible insertions and deletion operations on all types of Linked list Reverse a Single Linked List; Divide a singly linked list into two equal halves, Application of Linked List.

UNIT III 8 HOURS

Stack: The Stack as an ADT, Stack operation, Array Representation of Stack, Link Representation of Stack, Application of stack – Recursion, Polish Notation. Types of Recursion, problem based on Recursion: Tower of Hanoi.

Choice Based Credit System (CBCS) in the light of NEP-2020 B.Tech. (CSE-Full Stack Development & Blockchain-IBM) SEMESTER-III(2024-2028)

The Queue: The Queue as an ADT, Queue operation, Array Representation of Queue, Linked Representation of Queue, Types of Queue: Circular Queue & Dequeue, Introduction of Priority Queue, Application of Queues.

UNIT IV 7 HOURS

Tree: Definitions and Concepts of Binary trees, Types of Binary Tree, Representation of Binary tree: Array & Linked List. General tree, forest, Expression Tree. Forest and general tree to binary tree conversion. Binary Search Tree Creation, Operations on Binary Search Trees: insertion, deletion & Search an element, Traversals on Binary SEARCH TREE and algorithms. Height balanced Tree: AVL, B-Tree, 2-3 Tree, B+Tree: Creation, Insertion & Deletion.

Graph: Definitions and Concepts Graph Representations: Adjacency MATRIX, Incidence matrix, Graph TRAVERSAL (DFS & BFS), Spanning Tree and Minimum Cost Spanning Tree: Prim's & Kruskal's Algorithm.

UNIT V 8 HOURS

Sortings: Sorting Concept and types of Sorting, Stable & Unstable sorting. Concept of Insertion Sort, Selection sort, Bubble sort, Quick Sort, Merge Sort, Heap & Heap Sort, Shell Sort & Radix sort. Algorithms and performance of Insertion, selection, bubble, Quick sort & Merge sort.

TEXTBOOKS:

COU	URSE OBJECTIVES:										
The s	tudent will have ability to:										
1.	To learn the fundamentals of Operating Systems.										
2.	To study the mechanisms of Operating System to handle processes and threads and their communication.										
3.	To gain knowledge of process management concepts that includes architecture, Mutual exclusion										
	algorithms, deadlock detection and recovery algorithms.										
4.	To learn the mechanisms involved in memory management in Operating System.										
5.	To know the components and management aspects of disc scheduling.										
COU	RSE OUTCOMES:										
Upon	completion of the subject, students will be able to:										
1.	To describe the detail structure of Operating System.										
2.	To design and Implement Process management Techniques in Operating System.										
3.	To calculate CPU Scheduling criteria.										
4.	To understand The Memory Management of Operating System.										
5.	5. To elaborate Disc Scheduling.										
~	T A DETG										

SYLLABUS

UNIT I 10 HOURS

Introduction to Operating System: Introduction and Need of operating system, Layered Architecture/Logical Structure of Operating system, Type of OS(Multiprogramming, Time Sharing, Real Time, Networked, Distributed, Clustered, Hand Held), Operating system as Resource Manager and Virtual Machine, System Calls/Monitor Calls, Firmware-BIOS, Boot Strap Loader. Threads- processes versus threads, threading, concepts, models, kernel & user level threads, thread usage, benefits.

UNIT II 9 HOURS

Process Management: Process Model, Creation, Termination, States & Transitions, Context Switching, Process Control Block, CPU and I/O bound, CPU scheduler- short, medium, long-term, dispatcher, scheduling:preemptive and non-preemptive, Static and Dynamic Priority Criteria/Goals/Performance Metrics, scheduling algorithms- FCFS, SJFS, shortest remaining time, Round robin, Priority scheduling, multilevel queue scheduling, multilevel feedback queue scheduling.

UNIT III 8 HOURS

Interprocess Communication: Introduction to Message Passing, Race Condition, Critical Section Problem, Peterson's Solution, Semaphore, Classical Problems of Synchronization Classical IPC Problems: Reader's &

Writer Problem, Dinning Philosopher Problem.

Deadlock-System model, Resource types, Deadlock Problem, Deadlock Characterization, Methods for Deadlock Handling, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock Detection, Recovery from Deadlock.

7 HOURS **UNIT IV**

Memory Management: concepts, functions, logical and physical address space, address binding, degree of multiprogramming, swapping, static & dynamic loading- creating a load module, loading, static & dynamic linking, memory allocation schemes- first fit, next fit, best fit, worst fit and quick fit.

Virtual Memory- concept, virtual address space, paging scheme, pure segmentation and segmentation with paging scheme hardware support and implementation details, memory fragmentation, demand paging, working set model, page fault frequency, thrashing, page replacement algorithms- optimal, FIFO, LRU; Bleady's anomaly; TLB (translation look aside buffer).

UNIT V 8 HOURS

File Management: Concepts, Naming, Attributes, Operations, Types, Structure, File Organization & Access (Sequential, Direct ,Index Sequential) Methods, Memory Mapped Files, Directory Structures One Level, Two Level, Hierarchical/Tree, Acyclic Graph, General Graph, File System Mounting, File Sharing, Path Name, Directory Operations, Overview Of File System in Linux & Windows.

Input/output Subsystems- Concepts, Functions/Goals, Input/Output devices- BlockaAnd Character, Spooling, Disk Structure & Operation, Disk Attachment, Disk Storage Capacity, Disk Scheduling Algorithm- FCFS, SSTF, Scan Scheduling, C-Scan Schedule.

com	ponent shall exceed more than 10 marks.
2.	If there are 5 printers are connected in a system each process to print will take different time to complete, and CPU will give a fixed time to each process after that deadline next process will enter in CPU. If a problem not
	completed in a given slot then that process will be reenter as per the FCFS, on rotation basis? Apply the
	scheduling on this?
3.	Implement Non Preemptive Priority CPU Scheduling.
4.	Implement Non Preemptive Shortest Job first CPU Scheduling.
5.	If there are 5 different resources like 3 printer, 2 Scanner are connected to a system each taking different time to complete the task. Which scheduling is best and gives best performance of CPU?
6.	Implement the scheduling for that where CPU give chance to complete those process first which comes first?
7.	Implement Round-Robin CPU scheduling.
8.	Write a program to implement Semaphore.
9.	Find the solution for the situation where 5 faculties are sitting in a round table. There are 4 ball pens are
	placed on this table. At a time only one pen can be picked by one faculty to writing work. What will happen if
	all picked the pen for writing simultaneously?
10.	Find the solution for dentist checkup clinic where only one chair and one dentist is available for treatment.
	And having n chairs to waiting for patient.
	• If there is no patient, then the doctor sleeps in his own chair.
	• When a patient arrives, he has to wake up the doctor.
	• If there are many patients and the doctor is doing treatment of him, then the remaining patients either wait if
	there are empty chairs in the waiting room or they leave if no chairs are empty.
11.	Write a program for Memory Management Algorithms e.g. First Fit, Best Fit, Worst Fit.
12.	Demonstrate Virtual memory Techniques like, LRU, FIFO etc.
13.	Implement Shortest Seek Time First Disk Scheduling Algorithm.
14.	Implement Scan Scheduling Disk Scheduling Algorithm.
15.	Implement Circular Scan Disk Scheduling Algorithm.
16.	Implement Look Disk Scheduling Algorithm.

The s	tudent will have ability to:								
1.	Get the knowledge of basic software engineering methods and practices.								
2.	Define software requirements and requirement engineering.								
3.	Apply approaches for various design and their principle.								
4.	Explore testing in various domain.								
5.	Development of significant teamwork and project based experience.								
COU	URSE OUTCOMES:								
Upon	completion of the subject, students will be able to:								
1.	Compare various software process models and identify where these models are applicable.								
2.	Define and analyze software project management, the framework and the dimensions of software								
	project management.								
3.	Comprehend System modeling using UML.								
4.	Identify software testing strategies by using testing tools.								
5.	Analyze software risks and risk management strategies.								
CVI	I ARUS								

SYLLABUS

UNIT I 10 HOURS

Introduction to Software Engineering: The evolving role of software, changing nature of software, software myths.

A Generic view of process: Software engineering- a layered technology, a process framework, the capability maturity model integration (CMMI), process patterns, process assessment, personal and team process models.

Process models: The waterfall model, incremental process models, evolutionary process models, the unified process. Agile development-Agile Process, Extreme Programming.

UNIT II 9 HOURS

Software Requirements: Functional and non-functional requirements, user requirements, system requirements, interface specification, the software requirements document.

Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management.

System models: Context models, behavioral models, data models, object models, structured methods.

UNIT III 8 HOURS

Design Engineering: Design Process- Design concepts: Abstraction, Architecture, patterns, Separation of

Concerns, Modularity, Information Hiding, Functional Independence, Refinement, Aspects, Refactoring, Object Oriented Design Concepts, Design Classes- Design Model: Data, Architectural, Interface, Component, Deployment Level Design Elements.

Creating an architectural design: software architecture, data design, architectural styles and patterns, architectural design, conceptual model of UML, basic structural modeling, Use Case Diagrams, Class Diagrams, Interaction Diagrams, State chart Diagrams, Activity Diagrams, Package Diagrams, Component Diagrams, Deployment Diagrams.

UNIT IV 7 HOURS

Software Implementation: Structured coding Techniques, Coding Styles, Standards and Guidelines, Documentation Guidelines-Modern Programming Language Features: Type checking-User defined data types-Data Abstraction-Exception Handling- Concurrency Mechanism.

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, black-box and white-box testing, Object oriented software, Web Apps-validation testing, system testing, the art of debugging.

UNIT V 8 HOURS

Metrics for Process and Products: Software measurement, metrics for software quality. Quality Management: Quality concepts, software quality assurance, software reviews, formal technical reviews, statistical software quality assurance, software reliability, the ISO 9000 quality standards.

Risk management: Reactive Vs proactive risk strategies, software risks, risk identification, risk projection, risk refinement, RMMM, RMMM plan.

Maintenance: Software Maintenance - Software Supportability - Reengineering - Business Process Reengineering - Software Reengineering - Reverse Engineering - Restructuring - Forward Engineering - Economics of Reengineering.

COU	URSE OBJECTIVES:								
The s	tudent will have ability to:								
1.	Identify the core technologies and frameworks involved in full-stack development using MERN and Django.								
2.	Explain the architecture of modern web applications and the role of frontend and backend components.								
3.	Build and connect both frontend and backend using React, Express.js, and Django.								
4.	Evaluate different technologies for developing scalable and secure web applications.								
5.	. Optimize web applications for performance and implement best security practices.								
6.	Develop and deploy a complete full-stack web application using both MERN and Django frameworks								
COU	URSE OUTCOMES:								
Upon	completion of the subject, students will be able to:								
1.	Understand the principles and structure of full-stack development using MERN and Django frameworks.								
2.	Develop proficiency in building frontend components using React and Django templates								
3.	Create RESTful APIs and handle backend functionality using Node.js/Express and Django								
4.	Work with MongoDB and SQL databases for data storage and manipulation.								
5.	Deploy and maintain full-stack applications in real-world environments								
6.	Apply industry best practices for security, scalability, and optimization in web development.								
SYL	LABUS								

UNIT I 8 HOURS

Introduction to Web Development and Frontend Basics: Web Development Fundamentals, Overview of web technologies and client-server architecture, Introduction to HTML5, CSS3, and JavaScript, React Basics, Introduction to React: Components, JSX, Props, and State, Functional and class components in React, Handling events and form inputs in React, Advanced React Features, Hooks (useState, useEffect), State management and context API, Routing in React with React Router

UNIT II 8 HOURS

Backend Development with Node.js and Express.js: Node.js Fundamentals, Introduction to Node.js: Asynchronous JavaScript, Event loop, Working with NPM and Node package management, Handling file system and events in Node.js, Express.js for Web Development, Introduction to Express.js: Setting up servers, Routing, middleware, and request handling, Creating RESTful APIs with Express.js, MongoDB Integration, Introduction to MongoDB: NoSQL concepts and data modeling, CRUD operations with MongoDB, Connecting Express.js with MongoDB using Mongoose

UNIT III 8 HOURS

Full-Stack Development with MERN: MERN Stack Overview, Integrating React frontend with Express.js and

Choice Based Credit System (CBCS) in the light of NEP-2020 B.Tech. (CSE-Full Stack Development & Blockchain-IBM) SEMESTER-III(2024-2028)

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

MongoDB, State management across MERN stack, Frontend to backend communication using APIs, Authentication and Authorization in MERN, Implementing JWT (JSON Web Tokens) for user authentication, Securing routes and handling sessions, Building user registration and login systems, MERN Project, Develop a Full-Stack MERN application: User registration, login, and dashboard, Deploying MERN applications using Heroku or Netlify

UNIT IV 8 HOURS

Introduction to Django Framework and Python: Introduction to Django, Overview of Django: MTV (Model-Template-View) architecture, Setting up Django environment and creating Django projects, Understanding Django apps, models, views, and templates, Django ORM and Databases, Introduction to Django ORM (Object-Relational Mapping), Connecting to SQL databases: MySQL, PostgreSQL, Performing CRUD operations in Django, Templating and Static Files in Django, Using Django templates to create dynamic web pages, Managing static files (CSS, JavaScript) in Django projects.

UNIT V 8 HOURS

Advanced Django Features and API Development: Django Forms and Validations, Handling form submissions in Django, Building custom forms with Django forms, Adding validation and error handling, Django REST Framework (DRF), Introduction to Django REST Framework for API development, Building RESTful APIs in Django, Authenticating users with JWT in Django, Django Project, Build a Django-based eCommerce or Blog application, Implementing user authentication, CRUD operations, and API integration

TEXTBOOKS:

- 1. "Full-Stack React Projects" by Shama Hoque
- 2 "Learning React: Modern Patterns for Developing React Apps" by Alex Banks and Eve Porcello
- 3 "Node.js Design Patterns" by Mario Casciaro and Luciano Mammino

REFERENCE:

- 1. Pro MERN Stack" by Vasan Subramanian
- 2. "REST API Design Rulebook" by Mark Masse
- 3. "Fluent Python" by Luciano Ramalho
- 4. "Web Development with Node and Express" by Ethan Brown
- 5 "Two Scoops of Django 3.x" by Daniel Roy Greenfeld and Audrey Roy Greenfeld

LIST OF PRACTICALS

- 1. Full Stack Developer: Develop both the frontend and backend of web applications using the MERN stack or Django.
- 2. Frontend Developer (React.js): Specialize in building user interfaces and managing state using React.

Choice Based Credit System (CBCS) in the light of NEP-2020 B.Tech. (CSE-Full Stack Development & Blockchain-IBM) SEMESTER-III(2024-2028)

BTIBMC40 1N	DSC	Web Development	60	20	20	30	20	2	0	2	3

3.	Backend Developer (Node.js/Django): Focus on server-side logic, API development, and database integration using Node.js/Express or Django.
4.	Web Developer: Build and maintain full-featured websites and web applications.
5.	API Developer: Develop secure and scalable APIs for web and mobile applications.
6.	DevOps Engineer: Manage the deployment and scaling of web applications using platforms like AWS,
	Heroku, or Docker.
7.	Database Administrator: Design and maintain databases, ensure optimal performance, and implement security
	protocols.
8.	UI/UX Designer: Design user-friendly interfaces and optimize the user experience in web applications.
9.	Software Engineer: Work across all aspects of software development, including web, mobile, and desktop
	applications.
10.	Web Performance Analyst: Focus on optimizing web applications for speed, scalability, and security.

Choice Based Credit System (CBCS) in the light of NEP-2020 B.Tech. (CSE-Full Stack Development & Block chain-IBM) SEMESTER-III(2024-2028)

COU	COURSE OBJECTIVES:						
The s	student will have ability to:						
1.	Understand the general overview of the concepts and fundamentals of computer networks.						
2.	Understand the various components required to build different networks.						
3.	Familiarize the students with the standard models for the layered approach to communication between						
	machines in a network and the protocols of the various layers.						
COU	COURSE OUTCOMES:						
Upon	completion of the subject, students will be able to:						
1.	Understanding basic computer network technology.						
2.	Understand the functions of each layer in the OSI and TCP/IP reference model.						
3.	Obtain the skills of subnetting and routing mechanisms.						
4.	Familiarity with the essential protocols of computer networks, and how they can be applied in network design and implementation.						
SYL	LABUS						
LINI	T I Q HOURS						

Introduction: Importance of Computer Networks, Classifications & Types. Layered Architecture: Protocol hierarchy, Interfaces and Services, Connection Oriented & Connection less Services, ISO- OSI Reference Model, TCP/IP model overview, comparison of TCP/IP and ISO-OSI reference model.

UNIT II 9 HOURS

Data Link Layer & MAC Sublayer: Need, Services Provided, Design issues, Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel. Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, MAC Addressing, Binary Exponential Back-off (BEB) Algorithm, Distributed Random Access Schemes/Contention Schemes: for Data Services (ALOHA and Slotted- ALOHA), CSMA, CSMA/CA, CSMA/CD.

UNIT III 9 HOURS

Network Layer: Need, Services Provided, Design Issues, Routing Algorithms and types of Routing Algorithm, IPv4, IPv6, Classful and classless Addressing, Subnetting, Supernetting.

UNIT IV 10 HOURS

Transport Layer: Need, Design Issues, Multiplexing and Demultiplexing, transport layer services, UDP, UDP

Header Format, Principles of reliable data transfer, TCP, Connection Management, TCP Flow Control, TCP Congestion Control, TCP Header Format, TCP Timer Management, SCTP.

8 HOURS **UNIT V** Session layer: Overview, Authentication, Session layer protocols. Presentation layer: Overview, Data conversion, Encryption and Decryption, Presentation layer protocols (LPP, Telnet, X.25 packet Assembler/Disassembler). Application Layer: Domain name system, SNMP, Electronic Mail; the World WEB, HTTP, FTP. **TEXTBOOKS:** Andrew S Tanenbaum, Computer Networks, 6th Ed., Pearson Education, 2016.

- Behrouz A. Forouzan, TCP/IP-Protocol suite, 4th Ed., McGraw-Hill, 2010.

REFERENCE:

- William Stallings, *Data and Computer Communication*, 10th Ed., Pearson, 2014.
- Comer, Internet working with TCP/IP Volume one, Addison-Wesley, 2015. 2.
- W. Richard Stevens, TCP/IP Illustrated, Volume 1, 2nd Ed., Addison-Wesley Professional Computing Series. 3.

LIST OF PRACTICALS

- Demonstrate Different Types of Network Equipment's. 1.
- 2. Color coding standard of CAT 5, 6, 7 and crimping of cable in RJ-45.
- 3. LAN installations and Configurations.
- 4. Experiment with basic Network configuration commands.
- Write a program for error detection and correction technique. 5.
- Write a program for framing. 6.
- 7. Write a program for routing algorithm.
- Socket Programming. 8.
- 9. Study about different network simulators.
- 10. Establish and simulate peer to peer network using packet tracer.
- 11. Simulate LAN using hub and switch and discuss pros and cons of hub.
- Router configuration using packet tracer. 12.

COURSE OBJECTIVES:							
The student will have ability to:							
1. Understand Java Environment for application	Understand Java Environment for application development.						
	Understand Programing using Object Oriented Technology.						
3. Develop computer program to solve specific	problems with high performance.						
4. Create debug and run java standalone applica	ations.						
5. Understand the concept of Exception handlin	g and Multithreading.						
COURSE OUTCOMES:							
Upon completion of the subject, students will be abl	e to:						
1. Design new applications using object oriente	d methodologies.						
2. Explore various system libraries.							
3. Develop reusable programs using the concep	ts of inheritance, polymorphism, interfaces and packages.						
4. Apply the concepts of Multithreading and Ex	ception handling to develop efficient and error free codes.						
5. Design Data base connectivity program for si	imple problems.						
SYLLABUS							
UNIT I 12 HOURS							
Introduction to Java: Java's magic, The Byte of	code, Java Development Kit (JDK), Java Buzzwords, Object						
oriented programming, Simple Java programs, Data	types, variables and arrays, Operators, Control Statements.						
UNIT II 8 HOURS							
Classes, Inheritance, Packages and Interfaces: C	Classes: Classes fundamentals, Declaring objects, Constructors,						
this keyword, garbage collection. Inheritance: in	this keyword, garbage collection. Inheritance: inheritance basics, using super, creating multilevel hierarchy,						
method overriding. Packages, Access Protection, Importing Packages, Interfaces.							
UNIT III 7 HOURS							
Exceptions handling and Multithreading: Exception , Exceptions and Errors ,Types of Exception, Control Flow							
in Exceptions, Use of Try, Catch, Finally, Throw, Throws in Exception Handling, In-Built and User Defined							
Exceptions, Checked and Un Checked Exceptions.							
	O YYOYIDG						
UNIT IV	8 HOURS						
Understanding Threads: Needs of Multi-Thre	aded Programming, Thread Life Cycle, Thread Priorities,
