B. Tech - CSE/ CSE (ES/MA/AI/DS/MLCC/ICS/BDCE) /IT

SEMESTER-VII (2023-2027)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTCS710	DCC	Deep Learning Foundations	60	20	20	30	20	3	1	2	5

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability:

1. To understand the fundamental theoretical concepts of neural networks and deep learning.
2. To provide knowledge of various optimization algorithms used in training deep models.
3. To enable the design and implementation of CNNs and RNNs for real-world tasks.
4. To explore unsupervised learning frameworks like Auto encoders and Generative Models.
5. To develop skills in using modern deep learning frameworks for solving complex engineering and data-driven problems.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Demonstrate fundamental knowledge of McCulloch-Pitts neurons, Perceptron, and the mathematical foundations of gradient descent.
2. Design and optimize Multi-Layer Perceptron using backpropagation and advanced regularization techniques.
3. Implement Convolutional Neural Networks for image recognition, denoising, and computer vision tasks.
4. Apply Recurrent Neural Networks and LSTMs for sequential data analysis and natural language processing.
5. Evaluate generative models and unsupervised learning architectures for data synthesis and dimensionality reduction.

SYLLABUS

UNIT I

9 HOURS

Foundations of Neural Networks: - History of Deep Learning, McCulloch-Pitts Neuron, Perceptron's and Perceptron Learning Algorithm. Multilayer Perceptron's (MLPs), Representation Power of MLPs, Sigmoid Neurons, Feed Forward Neural Networks, Back propagation.

UNIT II

9 HOURS

Optimization and Linear Algebra for DL: - Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam. Mathematical Foundations: Eigenvalue Decomposition, Singular Value Decomposition (SVD), Principal Component Analysis (PCA).

UNIT III

9 HOURS

Regularization and Effective Training: - Bias-Variance Tradeoff, L1 & L2 regularization, Early stopping, Dataset augmentation, Parameter sharing, Dropout, Batch Normalization, Instance and Group Normalization. Weight Initialization methods (Xavier/He), Greedy Layer wise pre-training.

UNIT IV

9 HOURS

Convolutional Neural Networks (CNN): - Building blocks of CNN: Convolution, Pooling, and Stride. Architectures: LeNet, AlexNet, VGGNet, GoogLeNet, ResNet (Skip Connections). Applications: Image Denoising, Semantic Segmentation, Object Detection, Transfer Learning.

UNIT V

9 HOURS

Sequence Models and Generative Modeling: - Recurrent Neural Networks (RNN), Backpropagation through time (BPTT), Vanishing/Exploding Gradients. GRU, LSTMs. Attention Mechanism and Encoder-Decoder Models. Introduction to Generative Modeling: Variational Autoencoders (VAE) and Generative Adversarial Networks (GAN).

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability:

1. To introduce the fundamental principles of quantum mechanics as applied to computing.
2. To develop proficiency in the linear algebraic representation of quantum states and operations.
3. To analyze and design quantum circuits and basic quantum algorithms.
4. To understand complex quantum algorithms like Shor's and Grover's and their implications for cryptography.
5. To explore quantum query complexity and the theoretical limits of quantum speedup.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Explain the concepts of quantum "weirdness" and represent quantum states using Dirac notation and linear algebra.
2. Design and simulate quantum circuits using basic gates (Hadamard, CNOT, and Phase) and measurement principles.
3. Implement and analyze fundamental quantum algorithms such as Deutsch-Jozsa, Simon's, and Quantum Fourier Transform.
4. Evaluate the efficiency of Grover's Search and Quantum Walks compared to classical randomized computation.
5. Assess the impact of quantum computing on modern security (Shor's algorithm) and understand the limits of quantum query complexity.

SYLLABUS

UNIT I

9 HOURS

Introduction and Mathematical Foundations: - Overview of Quantum Computing; Quantum Weirdness: Mach-Zehnder Interferometer; Linear Algebraic Formulation: Kat-Bra notation, deterministic vs. randomized vs. quantum states; Cubits and Composite Systems (Tensor products).

UNIT II

9 HOURS

Quantum Operations and Circuits: - Operations in Quantum Computing: Unitary matrices and Semi definite matrices; Basic Gates: Pauli gates, Hadamard, Phase, and CNOT; Circuit representation; Projectors and

Measurements; Principle of Deferred Measurement; Swap Circuits.

UNIT III

9 HOURS

Fundamental Quantum Algorithms: - Classical vs. Quantum Circuits; The Deutsch and Deutsch-Jozsa Algorithms; Simon's Algorithm; Quantum Fourier Transform (QFT): Mathematical derivation and circuit implementation.

UNIT IV

9 HOURS

Advanced Algorithms and Random Walks: - Applications of QFT: Phase Estimation and Shor's Algorithm (Period finding and Factoring); Grover's Search Algorithm: Amplitude amplification and optimality; Randomized computation; Discrete-time Quantum Walks.

UNIT V

9 HOURS

Query Complexity and Future Trends: - The Query Model: Classical vs. Quantum complexity; Approximate degree; Total functions: Polynomial separation; Partial functions: For relation problem; Aaronson-Amboina's conjecture; Introduction to Quantum Security and Post-Quantum Cryptography.

COURSE OBJECTIVES:

The student will have ability to:

1. Understand cloud development concepts and AWS architecture.
2. Develop applications using AWS services like S3, Lambda, and DynamoDB.
3. Implement secure, scalable, and event-driven cloud applications.
4. Analyze deployment strategies and CI/CD pipelines in cloud environments.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Develop and deploy applications using AWS cloud services.
2. Implement REST APIs and serverless architectures.
3. Analyze cloud security, scalability, and performance issues.
4. Design distributed applications using messaging and workflow services.

SYLLABUS

UNIT I

6 HOURS

Introduction to Cloud Developing on AWS: Overview of AWS Cloud and infrastructure, Roles in cloud computing, Introduction to development lifecycle in cloud, AWS SDKs and development tools (Cloud9, CloudShell), Basics of distributed systems and cloud architecture.

UNIT II

6 HOURS

Storage and Security in AWS: Amazon S3: Buckets, objects, and storage management, Data protection and access control, AWS Identity and Access Management (IAM), Authentication and authorization mechanisms, Cross-account access and security best practices.

UNIT III

6 HOURS

Database and API Development: AWS database services overview, Amazon DynamoDB concepts (RCU, WCU, indexing), Developing NoSQL solutions, REST API development using Amazon API Gateway, API deployment, monitoring, and optimization

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. To expose students to authentic engineering environments, corporate operations, and professional workflows, bridging the gap between classroom theory and industry practice.
2. To train students in systematic problem identification, data collection, and analytical troubleshooting by tackling real-world engineering issues or software deployment constraints.
3. To cultivate essential workplace competencies, including professional ethics, time management, collaborative teamwork, and structured technical reporting.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Analyze the operational architecture, infrastructure, and technical tools utilized by a modern engineering enterprise or research institution.
2. Formulate, evaluate, and propose optimal engineering or software-driven solutions for a minimum of three distinct real-world technical problems observed during the training period.
3. Compile an industry-grade technical training report and professionally defend their observations, technical skills, and project outcomes before an expert evaluation committee.

Guidelines for Students Undergoing Industrial Training

1. Overview & Institutional Scope

Students need to complete a mandatory **minimum 2-week industrial training** program during the summer vacation of after third year.

- **Prerequisite:** Before starting your training, students must obtain clear instructions and official approval from the designated Faculty In-Charge and then by Head of Department (HOD).
- **Alternative Attachments:** In place of a traditional corporate internship, students are permitted to complete an academic attachment of equal duration at a recognized national institution (such as an IIT, NIT, or IIIT) or an accredited university abroad.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

- **Professional Value:** This training serves as initial transition into corporate engineering. It is designed to cultivate practical engineering skills, build industry networks, enhance employability, and establish a foundational awareness of workplace behavior, interpersonal dynamics, and professional ethics.

2. Operational Phasing & Responsibilities

Students are completely responsible for ensuring their conduct throughout the placement cycle is ethical, conscientious, and professional.

1. Application & Approval: Pre-Training.

Apply for a suitable training slot through the Training and Placement (T&P) Officer at least one semester in advance. Once an offer is secured, submit a copy of the official offer letter to your HOD or Faculty Coordinator. You are strictly prohibited from changing your company choice once it has been officially approved.

2. Verify Company Eligibility: Conflict of Interest Check.

To prevent a conflict of interest, students are strictly prohibited from completing training at a family-owned business or an enterprise where close relatives hold direct management authority.

3. Immediate Joining Notification: Day 1 of Training.

Upon arriving at training site, students must immediately contact to Faculty Coordinator. Provide your exact start date, company name, your active contact details, and the contact information of your designated industry supervisor.

4. Problem Formulation & Study: During Training.

Actively engage with the industry's technical tasks. Students must identify and document 3 to 4 practical problems currently faced by the facility or software engineering team

5. Professional Conduct & Confidentiality: Daily Operations.

Maintain 100% attendance and strictly follow all rules, safety protocols, and regulations enforced by the host organization. Protect the company's intellectual property; students are legally and ethically bound to maintain absolute confidentiality and must not share proprietary company data with third parties.

3. Industrial Training Report Guidelines

Students must compile a comprehensive technical report of **at least 25 to 30 pages** documenting their work. If multiple students are trained at the same organization, each student must author and submit an entirely independent, unique report.

Core Content Requirements

The technical manuscript must thoroughly document the following areas:

- **Enterprise Profile:** Essential history, market domain, infrastructure, and corporate introduction of the company.
- **Operational Workflows:** The sequence of manufacturing operations, production systems, or software development lifecycles (SDLC) deployed at the site.
- **Physical or Logical Layout:** A clear description of the facility floors, laboratories, workshops, or administrative networks.
- **Technical Configurations:** The major industrial equipment used, or the complete computer/server architecture and development environments required for running specialized enterprise software.
- **Logistics (Where Applicable):** The physical movement of raw, semi-finished, and finished materials (exempt for pure software engineering tracks).
- **Technical Case Studies:** Detailed formulation of your 3 to 4 technical problems, including the underlying data gathered, analysis steps, precise software commands or engineering math used, and your final data-driven recommendations.

9. Executive Summary & Bibliography (properly referencing all text citations, books, technical papers, or engineering standards used)

4. Assessment Framework & Evaluation

Evaluation is continuous and designed to measure the quality of your insights relative to graduate-level engineering attributes. A copy of your finalized report must be distributed to your industry employer, your internal department advisor, and your personal archive.

Evaluation Mechanism

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; ***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

The overall grade will be determined by the Faculty Coordinator and an appointed departmental expert committee via a formal **Seminar Presentation and Viva-Voce**.

Assessment Component	Evaluation Focus Criteria	Expected Graduate Attributes Tested
Technical Report	- Analytical depth of the case studies - Technical accuracy of data and logs - Structure and formatting compliance	- Engineering Knowledge - Problem Analysis - Investigation of Complex Problems
Seminar Presentation	- Clarity and quality of visual slides - Professional delivery and communication flow - Depth of technical knowledge during Q&A	- Modern Tool Usage - Design/Development of Solutions - Executive Presence

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Enable students to identify real-world, complex engineering problems and apply systematic research methodologies to formulate viable technical solutions.
2. Train students in designing, engineering, testing, and validating a complete product, system module, or computing architecture using modern engineering tools and industry-standard practices.
3. Foster collaborative engineering management skills, technical report writing, and the professional defense of engineered solutions before an evaluation panel.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Formulate a well-defined problem statement by critically reviewing contemporary research literature, identifying technical gaps, and establishing clear engineering requirements.
2. Design and develop an architectural framework, hardware prototype, or software system by incorporating sustainable design methodologies, algorithm design, and resource optimization.
3. Implement and deploy the proposed system using modern development environments, programming paradigms, cloud infrastructure, or advanced technical tools.
4. Evaluate the performance, scalability, and security parameters of the developed system against standard benchmark metrics, interpreting the results through rigorous testing.
5. Compile comprehensive, industry-grade technical project reports and documentation compliant with standard engineering formats, defending the work effectively through oral presentations.

Project Timeline

Phases

Phase 1: Planning & Requirement Analysis (Weeks 1–2)

Focus: Defining the scope, setting up infrastructure, and identifying functional requirements.

- **Week 1: Project Initiation**

- Form teams and define the problem statement.
- **Tooling:** Set up **Jira** boards (Scrum or Kanban), create Backlog, and initialize **Git** repositories.
- **Deliverable:** Project Vision document and initial Product Backlog.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

- Week 2: Functional Modeling**

- Identify Actors and Use Cases.
- UML Deliverables: * Use Case Diagram:** To define system boundaries.
 - Use Case Descriptions:** Detailed text for each primary flow.
- Tooling:** Map Use Cases to Jira User Stories.

Phase 2: Object-Oriented Analysis (Weeks 3–4)

Focus: Understanding the "What" of the system without focusing on implementation.

- Week 3: Static Analysis**

- Identify domain entities and their relationships.
- UML Deliverables:**
 - Object Diagram:** To model specific instances and data snapshots.
 - Initial Class Diagram (Domain Model):** Focus on attributes and relationships (1:1, 1:N, M:N) without methods.

- Week 4: Dynamic Analysis**

- Model how the system reacts to events.
- UML Deliverable: Activity Diagram:** To model complex business logic and parallel workflows.

Phase 3: Object-Oriented Design (Weeks 5–7)

Focus: Defining the "How" – architecture, patterns, and component interactions.

- Week 5: Interaction Modeling**

- UML Deliverable: * Sequence Diagram:** Detailed logic showing how objects communicate over time to fulfill a use case.

- Week 6: Detailed Class Design & Packaging**

- Apply SOLID principles and Design Patterns.
- UML Deliverables:**
 - Detailed Class Diagram:** Including methods, visibility, and interfaces.
 - Package Diagram:** Organizing classes into logical modules/subsystems.

- **Week 7: System Architecture**

- **UML Deliverables:**

- **Component Diagram:** Visualizing physical modules (API, Database, UI).
 - **Deployment Diagram:** Mapping software components to hardware/nodes (Cloud, Servers).

Phase 4: Implementation & CI/CD Integration (Weeks 8–10)

Focus: Coding, version control, and automated pipelines.

- **Week 8: Sprint 1 - Core Features**

- Develop core logic based on the Class and Sequence diagrams.
 - **Git Strategy:** Use branching (Feature branches → Develop → Main).

- **Week 9: CI/CD Pipeline Setup**

- Configure **GitHub Actions** or **GitLab CI**.
 - Automate build triggers on every git push.

- **Week 10: Sprint 2 - Integration**

- Develop UI and connect to the database.
 - **Jira:** Move stories to "In Progress" and "Testing."

Phase 5: Testing & Deployment (Weeks 11–12)

Focus: Quality assurance and final delivery.

- **Week 11: Testing Phase**

- **Unit Testing:** (JUnit, PyTest) ensuring methods work as intended.
 - **Integration Testing:** Testing the flow between components.
 - **Tooling:** Integrate test reports into the CI/CD pipeline.

- **Week 12: Deployment & Final Review**

- Finalize the **Deployment Diagram** to match the production environment.
 - Deploy to a staging/production environment (Heroku, AWS, or Azure).
 - Project Demo and handover.

Jira Backlog and a Git Branching Strategy

1. Jira Backlog & Sprint Structure

The project is divided into **six 2-week Sprints**. **Sample Jira Epic & Story Structure:**

Epic	Sample User Stories (Tasks)	Status
Requirements & Design	Create Use Case Diagrams; Draft System Architecture; Set up Jira Board.	Done/Sprint 1
Infrastructure	Initialize Git Repo; Configure CI/CD Pipeline; Setup Database.	Sprint 2
User Management	Design User Class; Implement Login/Auth; Sequence Diagram for Auth.	Sprint 3
Core Features	[Project Specific Logic]; Unit Tests for Core Logic.	Sprint 4-5
Deployment	Final Deployment Diagram; Production Hosting; Documentation.	Sprint 6

2. Git Branching Strategy

Students should avoid pushing directly to the main branch. A **Feature Branch Workflow** is best for academic teams to prevent code conflicts.

- **main branch:** Contains stable, production-ready code.
- **develop branch:** The integration branch where all features are merged before going to main.
- **feature/feature-name branches:** Created for every individual Jira task (e.g., feature/user-login).

3. Testing & CI/CD Pipeline

B.Tech./ B. Tech + M.Tech / B.Tech + MBA (CSE/ IT/CSBS) - All Programs

SEMESTER-VII (2023-2027)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTCS706N	SEC	Project	0	0	0	120	80	0	0	8	4

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

To meet your requirement for testing software and CI/CD, the students should implement a pipeline that triggers on every **Pull Request** to the develop branch.

The Pipeline Flow:

1. **Build:** Compile the code to ensure there are no syntax errors.
2. **Unit Test:** Automatically run tests (e.g., JUnit, PyTest, or Jest). If tests fail, the merge is blocked.
3. **Static Analysis:** Use tools like SonarQube or ESLint to check for code "smells."
4. **Deploy:** Automatically deploy to a staging environment (like Vercel, Netlify, or AWS).

4. UML to Code Mapping (Object-Oriented Focus)

Students must ensure that their diagrams are not just "drawings" but blueprints:

- **Class Diagram** → Directly maps to the Classes and Attributes in their code.
- **Sequence Diagram** → Maps to the logic inside their methods (which object calls which method).
- **Package Diagram** → Maps to the Folder Structure of their project.

Project Grading Rubric (Total 100%)

1. Analysis & Design (30%)

- **UML Consistency:** Do the diagrams match the actual code implementation?
 - *Check:* Does the **Class Diagram** reflect the actual inheritance and associations in the source code?
- **Behavioral Accuracy:** Do **Sequence Diagrams** correctly identify method calls between objects?
- **Architectural Soundness:** Does the **Deployment Diagram** accurately map to the cloud/server infrastructure used?

2. Object-Oriented Implementation (25%)

- **Encapsulation:** Are attributes private? Are getters/setters used appropriately?
- **Inheritance/Polymorphism:** Are these used to reduce code redundancy?
- **Solid Principles:** Is the code modular? (e.g., Single Responsibility Principle).
- **Design Patterns:** Did the team implement at least one recognizable pattern (e.g., Singleton, Factory, or Observer)?

3. DevOps & Tooling (20%)

- **Jira Management:** Is the backlog updated? Are stories assigned to specific members?
 - *Check:* Do commit messages reference Jira ticket IDs?
- **Git Workflow:** Is there evidence of Pull Requests and Code Reviews?
 - *Check:* Avoid "Mega-commits" (one giant commit at the end of the week).
- **CI/CD Pipeline:** Does the pipeline automatically trigger on pushes? Is the build status visible (Green/Red)?

4. Testing & Quality (15%)

- **Unit Testing:** Is there a significant percentage of code coverage?
- **Integration Testing:** Are API endpoints or database connections tested?
- **Documentation:** Is the README.md clear, including setup instructions and a system overview?

5. Final Deployment (10%)

- **Accessibility:** Is the project hosted on a live URL?
- **Stability:** Does the system handle basic "unhappy path" errors without crashing?

Definition of Done (DoD) Checklist

A Jira ticket is only considered **Done** when it meets the following criteria:

1. Design & Modeling

- **UML Alignment:** Any changes to the code structure are reflected in the **Class Diagram**.
- **Logic Validation:** For complex logic, a **Sequence Diagram** has been updated or created.
- **Documentation:** Public methods and classes are documented using standard docstrings (e.g., Javadoc, Docstring).

2. Code Quality & Standards

- **OO Principles:** Code follows Encapsulation and avoids "God Classes" (Single Responsibility Principle).
- **No Hardcoding:** Configuration values (like API keys or DB URLs) are in environment variables.
- **Peer Review:** At least one other team member has reviewed the **Pull Request (PR)** on Git.

3. Testing & CI/CD

- **Unit Tests:** New logic has corresponding unit tests.
- **CI Pipeline:** The CI/CD build is **Green** (passing) on the feature branch.
- **Zero Regressions:** Existing functionality still works as expected.

4. Integration

- **Git Merge:** The feature branch has been merged into the develop branch.
- **Jira Update:** The ticket is moved to the "Done" column and the "Actual Time Spent" is logged.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

COURSE OBJECTIVES:

The student will have ability to:

1. Understand the end-to-end machine learning pipeline, focusing on the evolution from N-gram models to modern Transformer architectures.
2. Develop technical expertise in data preprocessing, tokenization, and neural network design to build and train functional small language models.
3. Analyze and Optimize model performance through fine-tuning techniques (PEFT) and hardware acceleration strategies for efficient scaling.

COURSE OUTCOMES:

Upon completion of the subject, students will be able to:

1. Differentiate between traditional and modern language models and implement a basic machine learning development pipeline.
2. Design and implement custom tokenizers and prepare structured text representations for neural network input.
3. Build, train, and debug neural networks while effectively managing issues like overfitting and underfitting.
4. Deconstruct the Transformer architecture and visualize attention mechanisms to understand contextual predictions.
5. Execute parameter-efficient fine-tuning and apply hardware acceleration techniques to scale models under resource constraints.

SYLLABUS

UNIT I

10 HOURS

Language Modelling & Neural Foundations: Evolution of Language Models; N-gram Models and their limitations. The ML Pipeline: Defining the Machine Learning Development Pipeline for NLP. Neural Basics: Basics of Neural Networks; Training Machine Learning Models. Model Fitting: Identifying and resolving Overfitting and Underfitting; Debugging training issues. Project Kick-off: Practical implementation of a Small Language Model (SLM) skeleton.

UNIT II

8 HOURS

Data Representation & Tokenization: Text Processing: Introduction to Text Data Processing; Data Cleaning and Preprocessing techniques. Tokenization: Building a Tokenizer; Advanced Tokenization techniques (BPE, Word

Piece). Representation: Text Representation methods; Encoding text for models. Structured Input: Preparing structured input for LLMs; Mapping data to embeddings.

UNIT III

9 HOURS

Transformer Architecture & Training: Transformer Deep Dive: Introduction to Transformers; Transformer Architecture Components (Encoder/Decoder). The Attention Mechanism: Self-Attention and Multi-head Attention explained. Contextual Logic: How models make Contextual Predictions; Visualizing Attention Weights. Training Loop: Preparing Training Datasets; Training Transformer Models from scratch.

UNIT IV

9 HOURS

Fine-Tuning & Model Adaptation: Introduction to Fine-Tuning: Why fine-tune? Full-parameter vs. Task-specific adaptation. Efficient Adaptation: Parameter-Efficient Fine-Tuning (PEFT) and LoRA (Low-Rank Adaptation) concepts. LLM Scaling: Adapting Large Models for specific downstream tasks. Evaluation: Evaluating Model Performance and Accuracy after fine-tuning; Comparative metrics (Perplexity, BLEU).

UNIT V

9 HOURS

Model Acceleration & Efficiency: Acceleration Fundamentals: Introduction to Model Acceleration; GPU Fundamentals for ML Resource Management: Estimating Compute Requirements; Scaling models with limited resources. Performance Optimization: Optimizing Training Performance; Parallelism (Data vs. Model Parallelism). Deployment Logic: Efficiency techniques for inference and scaling in research environments.

TEXTBOOKS:

1. D. Jurafsky and J. H. Martin, Speech and Language Processing, 3rd ed. draft. Stanford, CA, USA: Pearson, 2023.
2. A. Vaswani et al. "Attention is All You Need," in Proc. Advances in Neural Information Processing Systems (NeurIPS), 2017.

REFERENCE:

1. I. Goodfellow, Y. Bengio, and A. Courville, *Deep Learning*, 1st ed. Cambridge, MA, USA: MIT Press, 2016.
2. L. Tunstall, L. von Werra, and T. Wolf, *Natural Language Processing with Transformers*, 1st ed. Sebastopol, CA, USA: O'Reilly Media, 2022.
3. DeepMind, "Research," [Online]. Available: <https://deepmind.google/research/>.

Choice Based Credit System (CBCS) in the light of NEP-2020

B. Tech CSE (MLCC)

SEMESTER-VII (2023-2027)

COURSE CODE	CATEGORY	COURSE NAME	TEACHING & EVALUATION SCHEME					L	T	P	CREDITS
			THEORY			PRACTICAL					
			END SEM University Exam	Two Term Exam	Teachers Assessment*	END SEM University Exam	Teachers Assessment*				
BTMLCC7 11	DSE	Google DeepMind AI Research Foundation	60	20	20	30	20	3	0	2	4

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

- Hugging Face, “NLP Course,” [Online]. Available: <https://huggingface.co/learn/nlp-course/>.
- PyTorch, “Transformer Layers — torch.nn,” [Online]. Available: <https://pytorch.org/docs/stable/nn.html#transformer-layers>.

LIST OF PRACTICALS

- Implementing an N-gram model and observing the "curse of dimensionality".
- Building a custom Byte-Pair Encoding (BPE) Tokenizer.
- Data Pipeline: Cleaning and vectorizing a raw text dataset.
- Designing a Simple Multi-layer Perceptron (MLP) for text classification.
- Building the Self-Attention block from scratch in Python/PyTorch.
- Training a Small Transformer (SLM) on a specialized dataset.
- Visualizing Attention Maps to interpret model focus.
- Fine-tuning an SLM using Parameter-Efficient Fine-Tuning (PEFT).
- Profiling GPU memory usage during training and optimizing batch sizes.
- Implementing an N-gram model and observing the "curse of dimensionality".
