Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

To introduction with (A) Introduction, (B) Product development, system design, productivity and quality control, (C) Planning and managing operations.

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes:

- 1. Students would be able to understand the need of Operation management, changes and challenges.
- 2. Students would be able to analyses product strategy and development process.
- 3. Students would be able to understand material handling strategy and assembly line balancing...
- 4. Students will be able to understand the system design i.e. CPM PERT, line of balance etc
- 5. Students would be able to focus is on efficiency and effectiveness of processes.
- 6. Students would be able to demonstrate various case studies based on new product development, Assembly line balancing, Value engineering, supply chain management etc.

Syllabus

Unit – I

Introduction

Introduction on Operations Management and overview, Operations Management Strategy framework Understanding similarities and difference among products, goods and services, Historical evolution of operations management-Changes & Challenges Life Cycle and PLC management, Stages of Product Development.

Unit - II

Product Development: Product Strategy and integrated product development, Process Strategy, Capacity Planning Decisions, Facilities Location Strategies.

Chairperson Shri Vaishnav Vidyapeeth Vishwavidyalaya Board of Studies

Joint Registrar Shri Velshnav Vidyapeeth Vishwavidyalaya Indore

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Unit - III

System Design: Facilities Layout and Material Handling Strategy, Group Technology, Flexible manufacturing system, Assembly line balancing, Project Management-CPM PERT, Line of Balance (LOB).

Unit - IV

Productivity & Quality tools, Productivity Concepts: Quality Circle, Kaizen and other SGA, Value analysis and Value Engineering, Total Quality management, Statistical Quality Control, Maintenance Planning and Control (Reliability, availability, maintainability).

Unit-V

Planning and Managing Operations: Demand Forecasting, Value chain and Supply chain Management Purchasing, vendor selection and material management, Inventory Management & Just-in-Time Systems, Materials Requirement Planning, MRP II and ERP Aggregate Process Planning, Scheduling, sequencing and dispatching.

Diploma in Mechanical Engineering

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs)

The theory should be taught and practical should be carried out in such a manner that students are able to acquire (A)Re-sharpen given cutting tool. (B) Interpret designation system of cutting tool and tool holder. (C) Select locating and clamping devices for given component. (D) Select and design jig and fixture for given simple component. (E) Classify and explain various press tools and press tools operations. (F) .Select a die for a given simple component.

Course Outcomes (COs)

The theory should be taught and practical should be carried out in such a manner that students are able to acquire different learning outcomes in cognitive, psychomotor and affective domain to demonstrate following course outcomes.

- 1. Re-sharpen given cutting tool.
- 2. Interpret designation system of cutting tool and tool holder.
- 3. Select locating and clamping devices for given component.
- 4. Select and design jig and fixture for given simple component.
- 5. Classify and explain various press tools and press tools operations.
- 6. Select a die for a given simple component.

Syllabus

Unit-I

Introduction: Concept, meaning and definitions of tool, tool design and tool engineering, Tools types, classification, features & applications, Tool engineering-functions and importance to enhance productivity and quality, Importance of process planning in tool engineering, Economy-concept, meaning, importance and principles in tool engineering, Universal acts & their elements of a manufacturing operation with suitable simple example.

Joint Shrl Valshnav Vidyapeeth Vishwavldyalaya Indore

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Unit – II

Tooling Classification

Tooling classification, material, properties and application, General design considerations. Design of single point cutting tool for strength & rigidity, Design for optimum geometry, Design strategies for H.S.S. Carbide and Ceramic, Chip Breakers, Design of form tool. Design of drill, and milling cutters.

Unit - III

Jigs and Fixtures: Definition, purpose and basic elements of designing jig and fixture, Functions of Jigs and fixtures. Clamping devices, Locators: Types-Sketches with nomenclature, Working, Applications, Fool proofing and ejecting. 3-2-1 principle of location, Design criteria for simple jigs and fixtures. Work holding devices Degree of freedom principle of location Locating devices various clamping devices Tool guiding methods and guide bushings Types of drill jigs and their application Common types of milling fixtures. Welding fixture.

Unit-IV

Tooling for forging and rolling – Equipment, Design principles for forging dies, drop forging, upset forging, Design principles and practice for rolling, roll pass design, Sketch, working and applications of following dies/mold Extrusion, Plastic injection, Blow molding.

Unit -V

Press Tools: Press working processes-types, Press tools: types, working, components and their functions. Calculations of press tonnage and shut height of press tool, Shear action in die cutting operation, Die clearance, Cutting force: Methods to calculate and methods of reducing. Shear angle- concept, need and method to give shear angle on punch and die. Types, working, and applications of stock stop, pilots, strippers and knockouts. Cutting dies-types and applications. Design of progressive cutting die, Prepare scrap strip layout, Determine dimensions of punches, die block and die shoe, Prepare sketch of stripper plat.

Diploma in Mechanical Engineering

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

The basic objectives of subject are (A)to understand fundamentals of industrial management practices.(B)To understand basics of system thinking.(C)To understand the concepts of material management.(D)To understand fundamentals of planning.(E)To understand basics of product planning and control.(F)To understand new trends in management.

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes

- 1. Students would be able to understand the need of fundamentals of industrial management practices.
- 2. Students would be able to analyses basics of system thinking and able to understand its aspects.
- 3. Students would be able to understand concepts of material management.
- 4. Students would be able to recognize fundamentals of planning and their need.
- 5. Students will be able to understand the basics of product planning and control.
- 6. Students would be able to understand new trends in management.

Syllabus

Unit – I

Introduction: Definition and functions of management. Management theories - Decision, Quantitative, Mathematical and Behavioral Science.

System Thinking: System definition and parameters. Different production and nonproduction systems, system design, different types of models under system thinking.

Unit - II

Material Management: Introduction, function, purchase systems, stock turn-over, ordered quantity. Inventory, need of inventory control, EOQ and simple numerical problems on EOQ.

person oard of Studies Shri Vaishnav Vidyapeeth Vishwavidyalaya Indore

Joint Registrar Shr! Valshnav Vidyspeeth Vishwavidyalayr Indore

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Safety stock, different techniques of inventory control, ABC analysis (simple treatment only). Stores management storing procedure and store records.

Unit - III

Planning: Nature, importance and purpose of planning process Objectives types of plans (Meaning only) Decision making Importance of planning steps in planning & planning premises Hierarchy of plans

Unit - IV

Production Planning and Control: Production systems, characteristics of each type, production and consumption rate. PPC functions, Gantt chart, advantages and preparation of Gantt chart (simple cases only), Critical ratio scheduling.

Unit-V

New Trends in Management:Role of computers in management, Introduction to Management Information System (MIS).Total Quality Management (TQM) - Introduction, stages of development - Inspection, Quality Control, Quality Assurance, Total Quality Control, TQM. Introduction to ISO-9000. Deming's PDCA Cycle (Plan, Do, Check and Action). Japanese Quality Management, culture, Kaizen Strategy (continuous improvement), Quality Circle, Just in Time (JIT) - concept and application.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

To introduction with (A) Estimation, (B) Process and production cost (C) Budgeting and Contracting

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes

- 1. Students would be able to calculate material cost of given component/ product.
- 2. Students would be able to identify and estimate elements of cost in various processes.
- 3. Students would be able to understand break even analysis to calculate break even quantity.
- 4. Students will be able to investigate the problem of cost and suggest their solution using cost reduction techniques.
- 5. Students would be able to interpret given model of balance sheet and profit loss account.
- 6. Students would be able to prepare simple engineering contracts.

Syllabus

Unit - I

Estimating- Need, Scope & importance in industries; Qualities of estimator; Estimating procedures, Sources of error; Constituents of estimation.

Costing- Need, Scope & importance in industries; Difference between estimating and costing; Procedure for costing; Costing methods; Advantages of efficient costing; Classification of costs; Précising determination; Process costing.

Elements of costs: Element of cost material; labor costs; Expenses; Component of costs; Terminology associated with overheads, their classification and allocation; Depreciation and obsolescence- Definition, types, different methods of calculating depreciation, numeric examples; Method to calculate machine hour rate (MHR) and process hour rate (PHR).

person Board of Studies Shri Vaishnav Vidyapeath Vishwavidyalaya

Join distrar Shrl Valshnav Vidyapeeth Vishwavidye indore

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Unit - II

Break Even Analysis: Classification of costs as fixed and variable costs; Relationship between the costs and quantity of production; Construction of breakeven charts and determination of breakeven quantity from given data; Definition of Break Even Point (BEP) and its needs in industry; Procedure of construction of Break Even Chart; Assumptions made in constructing Break even chart; Calculation of BEP analytically and graphically; Effect of changing various parameters on BEP.

Cost Estimation of Welding: Estimation of welding cost; Estimation of gas cutting cost; Estimation of arc welding cost; Factors affecting welding cost; Estimation of production cost of welding job.

Unit - III

Cost Estimation of Forging:Cost terminology associated with forging shop; Procedure of calculating material cost of a product for forging shop (including input weight, cut weight, forged weight etc.); Procedure of estimating cost of forging dies; Estimation of production cost of forging job.

Cost Estimation of Casting: Cost terminology associated with foundry shop; Procedure of calculating material cost of a product for foundry shop; Procedure of estimating cost of pattern making; Procedure of estimating foundry cost; Estimation of production cost of casting job.

Unit - IV

Cost Estimation of Machined Part: Terminology associated with machine shop estimation; Procedure of estimating cost of machined part for following operations- Lathe operations (Turning, Knurling, Facing, Boring, Drilling, Reaming, Tapping and Threading); Power consumption; Metal removal rates; Tool life.

Estimation of Process Cost: Understand importance of estimating various process costs; Procedure and steps to estimate cost for following processes- Producing power using diesel generating set (cost per hour and cost per unit), Power produced at thermal power plants (Cost per unit), Heat exchanger, cooling or heating (Cost per hour), Ice plant (Cost per unit weight).

Unit-V

Budgeting and Contracting: Define budget and budgetary control; Purpose of budget; Various types and benefits of budget; Prepare simple budget given required input data; Explain various accounting terminology like book value, Net Present Value, Work in progress, Gross Domestic Product (GDP), Balance sheet terminology, etc.; Define contracts, its characteristics and advantages; Types of contract; Tendering, manual tendering and E-tendering; Provision of different conditions in a contract; Documents required in an engineering contract; Prepare a contract for a given input situation.

Diploma in Mechanical Engineering

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

Students will learn (A) How to apply the concepts of stress analysis(B)Theories of failure and selection of machine components(C)Familiarize the various steps involved in the Design Process (D) The principles involved in evaluating the shape and dimensions of a component(E)Functional and strength requirements, (F) Use of standard practices and standard data.

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes

- 1. Students will be able to know about the machine elements, mechanical properties and types of failure.
- 2. Students will be able to Design of shaft and flange coupling.
- 3. Students will be able to Design of machine elements subjected to different types of load and moment.
- 4. Students will be able to Design Riveted joint, welded joints and Threaded joints.
- 5. Students will be able to Design of Clutch.

Note: PSG Design data book and/ or Mahadevan and Reddy's Mechanical design data book are to be provided/ permitted in exam hall (duly verified by authority)

Syllabus

Unit- I: Introduction to Machine Design: Machine and machine elements, Introduction of bolt, nut, axle, shaft, bearing, coupling, clutch, belt, rope, chain, gear etc. Basic design procedure, Basic requirements for machine elements, Mechanical properties, General design considerations like fatigue, creep, fabrication methods and economic considerations for strength, Types of failure, Types of forces, Types of loading and factor of safety.

Joint Registrar Shri Valshnav Vidyapeeth Vishwavidyalaya

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Unit-II

Shafts, Keys and Couplings: Various types of shafts, Stresses in Shafts, Design of shafts(solid and hollow) subjected to torque and bending moment, Definition of term key; Its various types, Splines, Forces acting on sunk keys, Shaft coupling and its various types, Design of flanges coupling.

Unit – III

Design of Machine Elements: Design of Machine Elements Subjected to Direct and Shear Loads; members subjected to direct loads – bolt, column, rod, cotter and knuckle joints, members subjected to shear loads rivet, cotter knuckle pin, root of threaded bolt, coupling, bolt, key. Design of Machine Elements Subjected to Bending Moment, Twisting Moment and Combined Bending and Twisting Moment; Introduction to pure bending, fundamental equation of pure

bending

Unit - IV

Design of Riveted Joint, Welded Joints, Threaded Joints: Types of Riveted joint - lap and butt joint, Modes of failure of riveted joints, Definition of welding, types of welded joints, strength of the butt weld, Types of threads and their proportions, Types of bolts, design of bolt, designation of threads as per I.S. codes.

Unit-V

Design of Clutch and Brakes:

Clutch: Need, Classification, Construction and Working of single and multi plate clutches, horse power transmitted by single and multi plate clutches.

Brake: Need & Classification of Brakes, Constructional detail and working of mechanical, hydraulic and vacuum brake, Details of master cylinder, wheel cylinder, Concept of brake drum, brake lining and brake equipment, Bleeding of brake.

Diploma in Mechanical Engineering

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

To introduction with (A) Importance of heat transfer, (B) various modes of heat transfer in detail (C) Heat Exchanger (D) Radiation.

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes

- 1. Students would be able to understand various modes of heat transfer.
- 2. Students would be able to analyses basics difference of conduction, convection and radiation.
- 3. Students would be able to understand significant of various dimension less no in convection.
- 4. Students will be able to understand concept of radiation.
- 5. Students would be able to explain concept boiling of liquids.

Syllabus

Unit - I

Basic Concepts: Modes of heat transfer, Fourier's law, Newton's law, Stefan Boltzman law; thermal resistance and conductance, analogy between flow of heat and electricity, combined heat transfer process;

Conduction: Fourier heat conduction equation, its form in rectangular, cylindrical and spherical coordinates, thermal diffusivity, linear one dimensional steady state conduction through a slab, tubes, spherical shells and composite structures, electrical analogies, critical-insulation-thickness for pipes, effect of variable thermal conductivity.

Unit – II

Transient Heat Conduction- lumped heat capacity analysis, time constant, transient heat conduction in solids with finite conduction and convective resistances

hairperson Board of Stu . dyalaya Shri Vaishna

Vidyapeeth Vishwavidyalay-Shri Valshnav indore

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Heat Transfer From Extended Surface: Types of fin, heat flow through rectangular fin, infinitely long fin, and fin insulated at the tip and fin losing heat at the tip, efficiency and effectiveness of fin, Biot number.

Unit – III

Convection

Newton's law of cooling, Dimensional analysis applied to forced and free convection, dimensionless numbers and their physical significance, empirical correlations for free and forced convection Continuity, momentum and energy equations,

Unit – IV

Heat Exchangers: Types- parallel flow, counter flow; evaporator and condensers, overall heat transfers coefficient, fouling factors, long-mean temperature difference (LMTD), method of heat exchanger analysis, effectiveness of heat exchanger, NTU method.

Unit-V

Radiation: Introduction, absorption and reflection of radiant energy, Emission, Black and nonblack bodies, Kirchhoff's law; intensity of radiation, radiation Exchange between black surface, geometric configuration factor, grey body relation exchange between surfaces of unit configuration factors.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Quiz/ Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

To knowledge of (A) chassis layout, suspension system, braking system, (B) wheel and tyres, frame and body, transmission, steering system, (C) ignition -system and automobile safety is imparted in this subject.

Course Outcomes (COs):

After completion of this course the students are expected to be able to demonstrate following knowledge, skills and attitudes

- 1. Students would be able to understand the need of automobile in society.
- Students would be able to analyses basics of automobile and able to understand various applications.
- 3. Students would be able to understand I C engines, their working and operating conditions.
- Students will be able to understand the basics of gearbox, drives, steering system and suspension system.
- 5. Students would be able to understand automobile safety and their need.
- 6. Students would be able to understand clutches, brakes and ignition system.

Syllabus

Unit - I

Introduction: Need, Scope & importance of Automobile Engineering, elements of automobile, Layout of Chassis and body, Classification of Automobiles, Types of bodies, Various operating systems used in automobile, Internal combustion engines-types, thermodynamic cycles used(Otto/ Diesel Cycles), comparison of petrol and diesel engines, fuel used and general arrangement sketch for each.

Unit- II

Gear Boxes: Sliding mesh, constant mesh, synchromesh and Epicyclic gear boxes, Automatic transmission system.

Joint Registrar Shri Valshnav Vidyapeeth Vishwavidyalaya

Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

Drives/Transmission: Overdrive, Propeller shaft, Universal joints, Differential; Rear axle drives. Hotchkiss and torque tube drives; Rear axle types; Front wheel and all-wheel drive.

Unit-III

Wheels and Tyres: Tyre types, Tyre construction; Tyre inflation pressure, Tyre wear and their causes; Re-reading of the tyre,

Steering system: steering gear boxes, steering linkages, steering mechanism, under and over steering. Steering Geometry, Effect of camber, caster, king pin inclination, toe in and toe out; Power steering; Integral and linkage types

Suspension system: objective and requirements, Suspension spring, front and rear suspension systems, Independent suspension system Shock absorbers.

Unit-IV

Clutches: Single plate, multi-plate, cone clutch, semi centrifugal, electromagnetic, vacuum and hydraulic clutches. Fluid coupling.

Brakes: Classification and function; Mechanical, hydraulic, vacuum air and self engineering brakes; Brake shoes and lining materials.

Unit-V

Ignition System: Magneto and coil ignition systems, System components and requirements, automotive lighting: Wiring systems Electrical instruments; head lamp, electric horn, fuel level indicator.

Automobile Safety: Safety requirements, Safety Devices, Air bags, belts, radio ranging, NVS (Night Vision System) GPS (Global Positioning System).

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 20 marks.

Course Educational Objectives (CEOs):

To understand (A)the current available CAD/CAM hardware, software and fundamentals(B)To learn new design optimization techniques and newer techniques in CAD/CAM(C)Students will gain a basic understanding of computer numerical control (CNC) machining processes and operations using a combination of G-codes, milling and turning machines.

Course Outcomes (COs):

- Use CAD software to generate a computer model and technical drawing for a simple, welldefined part or assembly.
- 2. Generate and interpret engineering technical drawings of parts and assemblies according to engineering design standards.
- 3. To demonstrate a basic understanding of machining fundamentals including speed and feed calculations, tooling systems, and work-holding systems for CNC milling and turning equipment.
- To demonstrate a basic and advanced understanding of numerical controlled (NC) programming strategies.
- 5. To demonstrate ability to set-up, program, and operate CNC milling and turning equipment. To demonstrate an ability to generate NC code using G-codes to machine parts to specifications.

Syllabus

Unit - I

Introduction to CIM:CIM definition and CIM wheel, evolution and benefits; CIM as a subset of Product Life Cycle (PLC) mgt; design for mfg (DFM) and concurrent engg; product design in conventional and CIM environment; terms like CAD, CAE, CAM, CAP, CAPP, CATD and CAO.

Unit - II

Geometric Modeling in CAD: Wireframe models, parametric representation of Analytical and Synthetic Curves. Surface Models: Parametric Representation of Analytical and Synthetic

Surfaces. 2D transformation translation, rotation and scaling with numerical examples, Solid Modeling: Boundary Representation, Constructive Solid Geometry, Parametric and Variation modeling, Feature Based Modeling,

Unit – III

CAM - concept and definition: NC (Numerical Control), Concepts and Types, Position and motion control, Constructional features of NC machines, CNC (Computerized Numerical Control) and DNC (Direct Numerical Control) - concept, features and differences. Advantages and limitations of CNC, Selection criteria for CNC machines. CNC machines: Types, classification, working and constructional features. Spindle drives and axes drives on CNC machines. Machine structure- Requirements and reasons. Elements of CNC machines - Types, working and importance of: Slide ways, Re-circulating ball screw, Feedback devices (transducers, encoders), Automatic tool changer (ATC), Automatic pallet changer (APC), CNC axes and motion nomenclature Machine Center, Adaptive Control.

Unit - IV

Part Programming of CNC Machines, **G** code and **M** code, MIRAC and TRIAC. Machine axis definition, Programming words EIA codes. CNC canned cycles G71, G72, G73, G74, G90, G92, and G94 for CNC lathe. Absolute and Incremental Programming. Canned cycles of CNC milling machine

Unit-V

Group Technology: Concept, Part family formation, Part Classification and Coding Systems types, OPITZ system, Production Flow Analysis, Composite Part Manufacturing and Machine Cell formation

Flexible Manufacturing Systems: Concept, Components and Types, Automated Storage and Retrieval Systems, AGVs and their types, Adoption Strategies of FMS, Flexibility Analysis. FMS Scheduling.

Chairperson Board of Studies Shri Vaishnav Vidyapeeth Vishwavidyalaya

List of Experiments:

- 1. Experiments and problem based on theory topics
- 2. Study of CAD Hardware system using physical and visual aid
- 3. Auto CAD commands and their applications in various types of designs/ drawings. ten/fifteen experiments
- 4. Solid modeling using parametric software

Joint Registrar Shri Vaishnav Vidyapeeth Vishwavidyalay Indore

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore Think Excellence. Live Excellence.

Diploma in Mechanical Engineering

- 5. Demonstration of CNC machine for identifying machine zero, drive systems, safety precautions.
- 6. Write CNC part programming of a given component.

Chairperson Board of Studies Shri Vaishnav Vidyapaeth Vishwavidyalaya Indore

Joint Registrar Shri Valshnav Vidyapeeth Vishwavidyalay

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit; *Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in

Class, given that no component shall exceed more than 10 marks.

Syllabus/Guidelines

Purpose

To carry out a project in one of the specializations of the program with substantial multidisciplinary component.

Instructional Objectives

To guide the students in such a way so that they carry out a work on a topic as a fore runner to the full-fledged project work to be taken subsequently in V semester. The project work shall consist of substantial multidisciplinary components.

Evaluation

Evaluation of major project will be as per guidelines of H.O.D/project coordinator/guide. But, student(s) must have to submit progress report ones in every 15 days period.

Chairperson Shri Vaishnav Vidyapeeth Vishwavidyalaya

Joint Registrar Shri Vaishnav Vidyapeeth Vishwavidyalaya Indore
